RIGHT ON!

I told you these idiots don't know what the hell they are talking about.

It ALWAYS feels so good to tell 'em; "I TOLD YOU SO"!

> right amount later.

The Internal Revenue Code Section 6404(f) gives the IRS the authority to
abate any portion of a penalty or addition to tax caused by erroneous advice
"furnished to you in writing by an officer or employee of the IRS... ."
See Form 843 at
http://www.irs.gov/formspubs/page/0,,id%3D10626,00.html
where it says in part:
````begin quote``````
The IRS will abate the penalty or addition to tax only if:

1. You reasonably relied on the written advice,
2. The written advice was in response to a specific written request you
made for advice, and
3. The penalty or addition to tax did not result from your failure to
provide the IRS with adequate or accurate information.
`````end quote```````

Reasonable reliance and provision of adequate or accurate information for
the answer are points the IRS is not willing to concede in all
circumstances.

>
> Applying the same principle here, you **may** be right that I may still need

> that I have the print-out of the official FCC email.

I think you are correct that you won't be fined the max. Having a print out
of the email _may_ not get you off the hook, though. I don't do FCC work,
so I don't know their procedures for fines. Applying the principles of
abatement of penalties under the IRS to excusing payment of fines under the
FCC is a bad thing.

Dan, I can understand your exasperation with people who choose not to learn CW or decide that they don't like it. However, that is as far as the understanding goes. It seems impossible to me that you can't understand that people know what they do, or don't, like.

For instance, I happen to absolutely know I would not enjoy jumping out of an airplane to parachute. I've never tried it, no. But I don't intend to because "it's just not me." I also absolutely know that I would not want to live anywhere but here in the United States. I've never lived outside the United States (except as a tiny child), and I don't intend to, because I like it fine living anywhere in the United States and I'm not inclined to experiment with anywhere else.

So, why is it so difficult for you to understand that people can and do make the decision that the CW part of this hobby is something they are not interested in? Are you saying that there is nothing you would not try to see if you liked it or not? You don't know yourself well enough?

Here's what I got from Cobra, first, my question:

Is a GMRS license required when FRS channels 8 - 14
are used on 22 channel radios?

And the Answer:

FCC license is not required for channels 1-7 only.

Mike

Anyway, CW testing is all over bar the shouting. The unanimously agreed language, now passed through all the commitee levels, makes it optional. It just has to be nodded through at the plenary session. This allows those countries mentioned, plus Germany to retain CW testing without it seeming that it no longer relates to ITU rules, whilst also allowing every other country to dump CW teasting.

Don't know about our local group but I heard something like around a 100 morse code contacts (all bands being used) and around 70-80 voice mode contacts.

Myself and about 1/3 to 1/2 of our local club pretty much boycotted Field Day this year..... (issues with local club)

Yep, that was the change. I have no idea why the two jobs were split up. Something must have changed to justify the split but I haven't kept up enough to know what it is. Anyway, no big deal - it happens all the time. Even the military job I worked in as a civilian after leaving active duty has now been split up into two different jobs.

> Data transmitted over Amateur Packet Radio is not permitted to be
> encrypted.

Larry.... it is "encrypted" in a sense. Otherwise my scanner should be able to recieve it no different than the voice comm's I already hear there. It is "encrypted" (or maybe a better choice of words being "encoded") in the sense that it needs to be encoded before sending over the air and decoded at the other end. And this is totally legal as long as the standards and such are publicized. Look at PSK31 and the 15-20+ other variations of the digital modes, are you now saying all of those modes are illegal?

When was the last time you listened to a packet signal being transmitted and could tell what was being sent as far as the content of the message, merely by listening by ear? If you are that good, you have my respect, as it merely sounds like a digital "blurb" to me.

Now do you understand what I meant by "encrypted?" The average "public" in "scannerland" does not have the capability to monitor that traffic as we do.

> radio service with little or no economic significance.

I have one of these combined radios. What the "instruction manual" (to the
extent that there aren't self-evident instructions) says is:

FCC Licensing Information

Channels 1 thru 14 transmit on FRS frequencies.
Channels 15 thru 22 transmit on GMRS frequencies.
Operation on GMRS frequencies requires a license from the FCC.

Then there is another paragraph that talks about how to get an FCC form 605.

The inference I draw from this is that the manufacturer in this case believes
that NO license is required as long as one transmits only on the FRS channels
and not on the GMRS channels. A license is required only when transmitting on
the 8 GMRS-only channels. [Whether a GMRS license is needed or not with
respect to FRS-only use is the matter being debated by some.]

Has anyone seen anything different in any other radio's manual?

I doubt it. The treaty requirements that call for a knowledge of code apply to all frequencies below 30MHz in use by the amateur service. 5Mhz is below 30. I see no room for FCC discretion here.

Now, if they want to call these 5 5MHz allocations something OTHER than amateur radio and authorize licensed amateurs to use them, that could be different - but they haven't said that. :-(

Actually, there are limits on this. If one has relied upon incorrect WRITTEN advice from a federal agency which enforces the subject matter of the advice, then that is sufficient to defeat civil penalties (at least it is in the Internal Revenue Code - 26 USC 6662(d)(2)(B)(i) - as such advice is "substantial authority"). [Be careful of generalized statements....]

I am sure you THINK they are, but they are usually the ones who
just make you look foolish over and over. I am sure you have a lot of
other colorful metaphors for us too. Doesn't matter.

> >You hold the title as being the only non-radio amateur who
> >presumes to tell us how amateur radio should be regulated.
>
> NOBODY can tell the great and superior Dave Heil how to run
> ham radio! Nossir! He GIVES orders, doesn't take them!

I've been following this NG for five years now...the closest
thing to an "order" I've ever seen Dave Heil "give" was a suggestion
that you go soak your head. You've obviously not taken that
suggestion because the stuff coming out of your mouth is as foul as
ever.

> >When did you last wear the uniform of the military? How recently did
> >you post your Army serial number and your rank?
>
> What has that to do with AMATEURISM, superior being?

What, indeed. YOU seem to find it "inappropriate" for anyone
else in this NG (especially those who routinely make a fool out of
you) to mentuion thier military service, yet you even go as far as
posting your rank, MOS and service number on occasions too numerous to
count.

You are, of course, two faced, but we knew that already.

> Why are you acting so despicably against US military veterans
> BECAUSE of their military service? I didn't serve in the SS.

He's not acting "despicably" against "military veteran(S)"...Just one...One who brings shame and dishonor to the service he "served" in, dishonor to the GOOD Soldiers he served with, and dishonor to those who died in combat before he was even inducted into that service.

That would, of course, be YOU, Your Scumminess. You tarnish and dishonor ALL veterans with YOUR grossly dispicable and disgusting attempts to embellish your own meager service on the graves of Army KIAs.

"Putz" is an understatement. "Creep" fits better. Some of my own "colorful metaphors" fit better yet, but I'll not share them here.

> >Well, it's a cinch that YOU don't knuckle under. You're NOT going to

Nope...it's PROBABLE.
>
> Of course Dave Heil is an IMMORTAL. He, like other members of
> the Gang of Four, will never die.

Needless to say there will be folks talking about Dave Heil a lot
longer than they will be talking about Lennie What's-his-name, the guy
who almopst got a license but could never quite cut it.

> My advocacy is simply for the elimination of a morse code test for
> any US radio license. I'm not after the elimination of morse code
> use. You are, as usual, confused on that issue. Your problem, not
> mine.

The confusion comes from your numerous lies. Like the one where
you assert you are "just" advocating the code test elimination, yet
you pepper the NG with reams of vile and spiteful rhetoric intended to
do nothing but denigrate and decieve.

> Members of the Living Museum of the Ancient Radiotelegraphy
> Service will be beeping long after I'm gone. They refuse to go.

We don't have to...We're licensed by the FCC to be there. You're
not.

This is an interesting, additional question. Unfortunately the answer is
not from FCC. Could you ask FCC (FCCInfo@fcc.gov) on this and post its
response?

Since this is an "allocation" that is actually more like an
authorization for Amateurs to operate on several land mobile
frequencies for domestic purposes, I don't see why not. And I don't
see a need to make it only under declared emergencies, either. How are
these folks going to get the needed experience if they can't
participate in "routine" nets and exercises?

Oops -- I just got a response from Motorola about its T5820. The answer differs sharply from yours from Corba;-)

Subject

T5820 Do I need to have a FCC license for this radio, if I ONLY use the FRS c...

Discussion Thread

Response (Catherine) - 07/01/2003 08:24 AM
We sincerely apologize for the delay in our response. We answer all emails thoroughly and individually and due to our unusually high email volume it has caused a delay in our response time.

You do not need an FCC license when using channels 8-14, which are the FRS channels.

Customer (thomas) - 06/25/2003 01:29 PM
T5820
Do I need to have a FCC license for this radio, if I ONLY use the FRS channels, NOT the GMRS channels?

Maybe that's a solution for the FCC. Have code tests at 5, 13 and 20
wpm. Just make them optional.

> It just has to be nodded through at the plenary session. This allows those

We oughta have a pool on how long it takes The Congress and FCC to get
through the various levels of rubberstamping. My wild guess is no more
than a year from today.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of June 30, 2003:

Novice - 33,796 (decrease of 15,533)
Technician - 256,588 (increase of 51,194)
Technician Plus - 67,416 (decrease of 61,444)
General - 141,181 (increase of 28,504)
Advanced - 83,239 (decrease of 16,543)
Extra - 104,271 (increase of 25,521)
Total - 686,491 (increase of 11,699)

I don't claim to be an expert at motiuon picture projection, Len. But
I do know some facts on the subject that you don't know. Apparently
that bothers you a great deal.

> When were you ever an "expert" in optics in addition to doing your
> "electrical engineering" thing?

One does not have to be an expert to know more than you do, Len ;-)

> Just curious since I was directly
> involved in a rather large DoD contract at Rockwell on an
> interferometer.

Did the interferometer project motion pictures?

> Had to work with lots of high-level optical

>
> Back when I actually RAN a projector in a cinema, the film rate was
> 24 frames per second.

That's what I wrote, at least twice, above. 24 frames per second is
the rate film goes through the projector. But it is not the rate at
which images are flashed on the screen.

> Back when I was actually running a 16mm
> projector, the film rate was 24 frames per second.

That's what I wrote, at least twice, above. 24 frames per second is
the rate film goes through the projector. But it is not the rate at
which images are flashed on the screen.

> Once, when I rented
> an 8mm projector to see some home movies of family, the film rate
> was 24 frames per second.

That's what I wrote, at least twice, above. 24 frames per second is
the rate film goes through the projector. But it is not the rate at
which images are flashed on the screen.

> While I never got a Masters in Optics,

I don't think you have an accredited degree in anything, Len ;-)

> I can't ever recall any projectors that flashed on an image twice or any
> other multiples.

Forgetful, huh? Here's a hint: Except for some museum pieces, they all

> All the mechanisms I've seen had the simple pawl
> and shutter arrangement to blank the projected image during the
> frame pull-down time.

Then you haven't seen any projectors newer than the 1920s or so.

> The eye sees 24 frames per second and the eye-brain combination
> perceives motion on a frame-to-frame basis.

24 frames per second. 48 images per second. Each frame is projected
twice. At 24 images per second, many people see objectionable flicker.
Which is where the term "flicks" came from.

> It doesn't make any
> difference if the SAME frame is flashed on twice, thrice, or quadruple
> times.

Yes, it does. See the references.

> What you and everyone else sees is those 24 frames per
> second.

24 frames per second. 48 images per second. Each frame is projected
twice. At 24 images per second, many people see objectionable flicker.

> The rate doesn't vary more than allowed by the internal
> projector rate controls.
>
> Feel free to post your American Cinematographer's association card

> ...and you can send morse code in between the dits and dahs of
> your solid-state break-in T/R switch.

Nope. I never claimed that. You are mistaken.

> Of course you can. You SAY so therefore you are absolutely correct.

Nope. I never claimed that. You are mistaken.

What I CAN do when operating QSK/break-in CW/Morse is HEAR the receive
frequency between dits and dahs. Which is one of the big advantages of
CW/Morse over other modes. The first setup I used with that feature
was a homebrew station I designed and built about 1973. It used a
highspeed keying relay and a vacuum-tube TR switch.

Like it or not, I know far more about the subject of QSK/break-in
Morse/CW than you do, Len.
>

> expert.

I don't demand a thing, Len old boy.
>
> As far as I'm concerned, the acquaintences I have in the motion
> picture industry don't agree with you.

You don't understand how projectors work, Len.

> >> For nearly all film projectors and editors, it is still 24 per second.
> >
> >Incorrect.
>
> :-) Check with the motion picture standards folks. Since before WW2

> the motion picture frame rate has been 24 images per second.

24 frames per second. 48 images per second. Each frame is projected
twice. At 24 images per second, many people see objectionable flicker.

The frame rate and the image rate are not the same.
>
> >You're simply wrong on this, Len. 24 frames per second, 48 images per second.
> >
> >Be a big boy and admit it.
>
> What is a "big boy?"

Somebody mature enough to admit a mistake and learn something new.
Which leaves you out, Len.

Congress doesn't get involved with these kinds of issues, they deligated
this stuff to
the funny cookie corporation. All that has to happen is the FCC to
issue a notice
of inquiry on rule making, do the comment period, write up the new
rules, and
publish them in the federal register. When the FCC has nothing better
to deal with.

Maybe make it "you have to pass 4 of 5 elements to get your extra.
Those are
the tech written, the general written, the extra written, the code test,
OR a super
extra written. Essentially you select either the super extra written OR
the code
test to complete your extra, the others are required." What to require
for the tech
and general would need to be worked out. Maybe the general needs the
tech written, general written, extra written OR code test.

26. Licenses: FCC Radiotelephone & Ham License Recerprocity?

nope, sorry. still have to take the test. there are lots of rules,
different operating procedures, and theory from basic circuits to antennas,
fields, waves, that are part of the amateur tests. some of it may be common
in the technical area, but there are lots of different things also.

Why ask here -- you'll get right and wrong answers -- can you sort them out.

Only two places to ask with any relialibility.

1. The FCCE-mail: fccinfo@fcc.gov

2. ARRL hq@arrl.org

IIRC the IRC gives the IRS specific authority to waive penalties for
reliance on incorrect IRS written responses. Charlie Richmond didn't
have that benefit, however, and neither do most other folks who deal
with the Federal government.

Read _Richmond v Office of Personnel Management_, one of my
favorite SCOTUS decisions of recent times. The only one who had
any sense of compasssion in that decision was Thurgood Marshall, J.,
who suggested in dicta that Charlie Richmond seek reclamation of the
withheld payments by means of a private bill in The Congress, which
he did and was successful.

>to deal with.

I think ypu are mistaken, Robert.

The ITU treaty is what kept FCC from just dumping Element 1 back in 2000. And FCC doesn't ratify treaties - The Congress does. The revised treaty is not considered valid by the USA until Congress ratifies it. Which is usually a quick rubber-stamp thing. But it does have to wait its turn.

Once ratified, however, FCC is not absloutely required to do the NPRM thing. It's a judgement call on their part. I think they will simply say that the issue was dealt with back in 98-99 and again in 2000, so they don't need to do comments and reply comments. Bye bye Element 1.

I like it!

Some years back I wrote here about a "Chinese menu" system. Basic idea was that there would be a one or two elements that everybody had to pass for the entry-level license, then upgrades could be earned by taking various other test

elements, including code.

Maybe such a proposal would get widespread support.

Actually, the German radio administration support the deletion
of ITU rule S25.5. They are record that they will not continue
the domestic requirement.

It is the German IARU society that supports code exams.

Why do you think they need to? The Technician license was never indended to be the "general operating license" of the service, but more of an experimenter's license (and lately, as the entry level class replacing the Novice class in this respect). The "operating license" is actually reserved for the license class called General.

I'm not saying that technician licensees aren't needed or are useless; just that history says otherwise (as compared to what you said). If they were truly interested in this sort of thing, then they would upgrade.

Years ago, I had my general class amateur license. I decided to go after my amateur extra, but also wanted my commercial telegraph license. As I recall, if you had your commercial telegraph license (1st or 2nd class), you would get credit for your amateur extra ticket (CW only - you still had to pass the theory). I took but one test and passed both my commercial telegraph and amateur extra class ticket (also obtained the ship radar endorsement). I also passed the 1st class radiotelephone operator's license, but that was on a different day. The only common element at the time was that the 1st or 2nd class radiotelegraph ticket would entitle you to a 'pass' on element 1-C towards the amateur extra. Nothing else counted.

73 from Rochester, NY
Jim AA2QA

ps - in later years, I believe (just believe - I'd like to hear comments) that the amateur extra would qualify you for the telegraphy portion of the commercial telegrapher's license - but this was only recently once the commercial telegraph ticket became essentially worthless. It used to be the other way around.

Does the instruction manual say anything about power output on the
shared
FRS/GMRS channels? These are usually 1-7 if the radio conforms to
"1-14 FRS,
15-22 GMRS". If its above 500mW its not legal for FRS use, and must
conform to GMRS regulations. Wacky ain't it?

You can take a "license in a day" class where all the material is taught in a day. At least 75% of the participants passed the test on the first try, including children and others without the technical background.

The test is question pool format. The questions and answers are published. If the class is not scheduled soon enough, just buy one of the question pool study books. Review this book for one or two days and memorize the questions and answers. After studying the book, take the next amateur radio test.

Dee, no doubt CW has its benefits. Contrary to a lot of the "pro-CW" folks, the "anti-CW" folks recognize its capabilities. (It's silly to even put the groups in such diverse categories.) However, that does not negate the argument that, even though it may be quite beneficial, there are those of us who simply choose not to learn it well enough for practicability (eh?).

I clipped my diode, and did some crude tests of my bandwidth and it looks good. And it loads fine into a dummy load. 50 watts. We'll see if I can get the rig to load into my antenna. It should be compliant, as the dipole antenna isn't even cut for the band.

Anyone else prepared to get on 5 here?

Funny that you should say that, because just this evening at dinner
my wife was relating that one of her co-workers is an ex-paratrooper
who absolutely gets the shakes and white knuckles when he has to fly
as a passenger in a commercial airliner and land on a runway sitting
in his seat - he has no problems when it's just him and 10,000 feet of
thin air between him and the ground.

Me, I had problems falling off a ladder at 8 feet above ground,
twisting my knee - after 30 years the knee started bothering me
again.

To each his own.

The only issue is whether the FCC should require demonstration of
ability to copy code as a part of the examination procedure - and
we all agree (inwardly or outwardly) that that will be going away
real soon.

Any other argument is meaningless.

20 was the poorest I've seen it in a long time. 15 and 10 were useless here in EPA.

>There
>wasn't more than a couple dozen voice contacts on 15m, 10m, and VHF
>combined.

It will be interesting to see how the totals work out contest-wide. There may have been more CW than voice contacts across the board this year. Pretty good for a mode that we are told is "obsolete", huh, Dee?

>However, there's always a silver lining. Most of us got a pretty good
>night's sleep since the bands were poor.

I hung in till about 3 AM and was back at it soon after sunrise. Even got in a short run Sunday morning.

>Today, we knocked down most of the
>antennas and stations early and just kept our 20m ones running until time to
>quit. That left only a minimal teardown to do this afternoon.

Teardown took me less than one hour:

- disconnect the rig and battery
- pull up ground rod
- pack rig, battery, papers, bug, etc. into their respective boxes
- fold up the special homebrew FD table
- tear down tent and roll it up
- untie three antenna ropes and drop antenna
- roll up and pack antenna
- load up car

Probably the quickest getaway yet!

361 days till the next one.

>Absolutely. It changed it from an odds on probability to a near certainty.

Well, we'll have to agree to disagree about the probability back in 1992.

But note this: Medical waivers for the 13 and 20 wpm code tests began in 1990.
Anyone who could get a doctor's note needed only to pass 5 wpm. And there
were/are lots of accomodations available.

Then in 1991 the code test for all amateur privs above 30 MHz went away.

Was there a sustained increase in amateur radio growth because of those
changes? No - just compare the growth in the '80s vs. the '90s. There was an
initial surge when the changes happened, that's all.

It's been over three years since the restructuring and US license totals have
increased by about 11,000. I thought we'd be over 700,000 by 2001.

If/when FCC dumps Element 1, will we see lots of growth? I sincerely doubt it.

You left out a key word: "mandatory". Morse/CW is still used in some parts of
the maritime services, it's just not mandatory anymore.

And removal or retention of various tests or other requirements will not change
any of that. Cell phones, computers and 'net connection have become a practical
necessity in most people's lives today.

We all have to learn things that we may not like all that much. I had to sit and learn classes in school that I found boring to distraction.

> For instance, I happen to absolutely know I would not enjoy jumping out of
> an airplane to parachute. I've never tried it, no. But I don't intend to
> because "it's just not me."

But if you wanted to parachute out of planes, you would indeed have to jump out of a plane. I know that sounds redundant or maybe redumbdant, but it helps prove my point. You aren't that interested in that sort of hobby, so you don't do it. It is strange that so many people have a problem with my basic premise: that people who aren't willing to learn the requirements are not all that interested in the ARS. In this case, the requirement is the Morse test.

> So, why is it so difficult for you to understand that people can and do make
> the decision that the CW part of this hobby is something they are not
> interested in? Are you saying that there is nothing you would not try to
> see if you liked it or not? You don't know yourself well enough?

If a person does not want to take the Morse test, that is their right and privilege. They won't get the HF ticket however.

If they are interested in the ARS, but do not learn Morse because they don't like it, they are not as interested as someone who does make the effort.

> who simply choose not to learn it well enough for practicability (eh?).

You don't have to use it, just learn it. I don't like the stupid satellite questions on the test, but I had to learn them. (sorry satellite folks) If we threw out all the parts that some people did not want to learn, there would soon be no test whatsoever.

Let's make the case:

Satellite stations - this is a very mode-specific section

Strike

Band edges - most hams I know have a ARRL band page by their rigs.

Strike

Theory - Many hams never plan to homebrew and some even have other people wire their stations for them.

Strike

Packet questions? Mode specific and most hams aren't interested in packet

Strike

Questions about SSTV Mode specific, and many hams never plan to use SSTV

Strike

Baudot code questions? Give me a break!

Strike

Test equipment questions? In this day of appliance operations, who needs those sort of questions?

Strike

I'll stop now, but for every type of question on the test, there is a person who thinks it doesn't belong there.

Hi Kim,

I thought the whole bruhaha was not over learning it well enough for practicability, just well enough to knock out 25 consecutive characters (...and punctuation marks, numbers, and prosigns count for two!) out of five minutes of 5-wpm Morse code? Additionallly, there is ample time at the end of the exam to "fill in the missed characters," so with a bit of common sense and preparation...? As I've said before, I think many (On both sides of the fence.) have lost sight of what this is really over.

I personally believe CW is still a very major factor in ham radio, hence it is very appropriate to administer a very basic, dare I say "entry-level," exam. The current Element 1 fits that bill quite nicely. This newbie cannot tout the removal of Element 1 testing as an "accomplishment," as some have recently. It's actually the exact opposite as some will never know the feeling of accomplishment that comes along with the VE asking "Ok, do you want to take any other exams today?" (Not even needing to inform you that you've passed.) Some may never touch a key in life, however, others may be inspired to take it a bit further and see where it takes them...20, 30, 40-wpm or more. But many will never know because they won't be "forced" to take that initial step. Just MHO.

And just to be clear on this, we aren't "anti-CW" we are "anti
CW TEST requirement."

If you want to learn, use or otherwise promote CW as a mode
we support that just as we support learning and using
any mode that suits your fancy.

Cheers,
Bill K2UNK
Director No Code (test) International

Betcha you decided that some of them that you thought you'd never like turned out to be interesting after all, too. Most folks mature into understanding that as a possibility, even a liklihood. SOME don't.

I remember, as a high school freshman, hating history class - until we really got into it. I later minored in history.

The best proof of that is in the millions of hams since the end of the 18th century who DID learn the code without hesitation or even giving it a passing thought as to how "unnecessary" it might be. Basics are never "unnecessary".

Actually you didn't have to learn the satellite stuff to
get a passing grade on the test. I have no problem adding
a couple of questions to the question pool for any license that
asks about CW as a mode. That is, however, a distinctly
different situation than having an exclusive and separaelty
graded test element as Morse code does today.

> If we threw out all the parts that some people did not
> want to learn, there would soon be no test whatsoever.

The issue is that morse has lost the need for exclusive
testing as a separate test element. Your analogy isn't equivalent
to boring school classes because the goal of those classes is and was
within the objectives of providing a complete education. FCC
licensing is not, however, the means to mandate a specific
skill capability for one mode.

Sorry, you are expanding a lack of interest in morse as
a defining element as to one's overall interest in
amateur radio. That is simply untrue. There are thousands of
hams that have ZERO interest in morse, many have even
passed the tests to advance, yet they are excellent hams.

Bottom line: Knowledge of morse is neither a positive or negative
indication of any individual's interest(s) in ham radio.

That is absolutely true...for now.

> If they are interested in the ARS, but do not learn Morse because they
> don't like it, they are not as interested as someone who does make the
> effort.

I can say the same thing about learning or not learning
CPR. Are those that decide not to learn CW less
interested in safety than those that do? The answer is NO,
because there are many ways people can be far more safety
conscience than someone else who may know CPR.

Cheers,
Bill K2UNK

> make the effort.

You're really describing the "hazing effect", AFAICS. I approve of CW testing precisely because of this effect; after being forced to run the gauntlet of CW practice and testing, many will decide they love CW--but more importantly, their attitude to the ARS in general will be affected by the fact of having spent effort (however minor) and jumped through hoops (however simple) to get into it.

(For that purpose, almost any hoop will do, of course. The chief advantage of CW over the theory test is that it's much harder to "cram". I'd have been an extra 20 years ago without that one extra "hump", as would several people I know. And yes, the fact that we didn't, does indeed prove that we "didn't want to badly enough".)

There's a chicken-and-egg question, of course. How many people got their license before the no-code tech, but weren't interested in CW at all? How many became interested in CW after the fact as a result of the "hazing effect"? How many support CW now because they feel the need to haze the newbies as they were hazed, even though they don't use the mode themselves? And if so, what's so terrible about that?

Regards,
Len.

Disclaimer: I'm interested in CW for its own sake. Or is it because I'll fight the man that calls me a "nickel extra", let alone a "no-code extra"? Now I'm motivated to get my ticket before they eliminate CW entirely, which seems likely.

Whatever it may ahve originally been intended for (In 1951) it's
certainly evolved past that...a long time ago.

> I'm not saying that technician licensees aren't needed or are useless; just
> that history says otherwise (as compared to what you said). If they were truly
> interested in this sort of thing, then they would upgrade.

Most ARES and other public service stuff I know of locally is
already being conducted by NCT's. This "allocation" is not on a
traditional Amatuer Band, has significant restrictions on it's use to
prevent interference to other users, and pretty much puts everyone on
the "level playing field" as far as useage goes. These "channels" are
going to be for "plug and play" kind of use...Not traditional Amateur
useage, so why not let everyone have access? These will not be
DXCC/WAS/contest frequencies.

I think once the NCT's had some exposure and wanted to get past
the 50 watt/dipole only type of operation, they'll aspire to the
higher classes.

Absolutely! We just don't know what will interest us as we go through life.

.....does that make people who automatically know that they don't like
Morse and will never use it "know it all's" (sorry, couldn't help it)
;^) my bad!

I just thought of it as another part of the testing process. That I had
my own difficulties with it, or whether or not it was applicable or not
(IMO it is) was and is irrelevant. It's there, it's part of the test.
Just do it. (all apologies to Nike)

I wasn't making a pass/fail argument Bill, My argument is that you take
a test based on what the test is. Another made the argument that they
will never use Morse, so why should they have to take the test. In that
context it is relevant.

Okay, I'll repeat:

I wasn't making a pass/fail argument Bill, My argument is that you take
a test based on what the test is. Another made the argument that they

will never use Morse, so why should they have to take the test. In that context it is relevant.

Your's is a different argument. On that, there *is* a case to be made as to Morse code being an anachronism, and that it is one element in that a failure will cause you to fail the intire test - disregarding the certificate that you get for passing the test.

But that's not the specific argument here - tho there isn't anything prohibiting taking it in that direcion, 'ceptin' some likely confusion!

Back in my younger days my attitude was as follows; I hope I never get to a point in my life that I would say I wish I would have done..... That probably explains my attitude a bit.

No I would not jump out of a perfectly good aircraft. Although I think I would have enjoyed doing so...again in my younger days.

To keep my comments in context. I stand by my statement about CW. Giving it up before giving it a try is not comprehendable to me.

Do you think I was born with a silver key in my mouth? Not hardly. It was just as much a struggle for me to learn it as anyone else.

I could have stopped at 5 and got my 'Technician ticket' and stayed there for decades until the FCC dropped the HF CW to 5. But I chose NOT TO DO THAT. I completely skipped the Technician. I went from Novice straight to General, then up. I did so because I knew if I would have gotten on two meter AM as a Novice, I would have gotten the Tech then stayed a Tech. I forced myself to learn CW. And one day I passed that 12 wpm block. And I KEPT pushing myself to get better. Thats my story. Perhaps that will explain why I think as I do.

I am challenge oriented. And I was a Army Sgt. hi hi

According to what I heard on the RSGB site...it ain't gonna be white noise.
Its gonna be high levels of carriers all over the spectrum. As high as 30/9
withing 30 feet of a source. Inside and outside the houses.

But that's a different argument Bill. When this thing got rolling, I
was saying that anyone who does not get a General or above license at
the present time because they don't want to learn Morse does not want
the license badly enough to learn Morse code.

All quite a different argument.

No. If you want to give CPR, you had darn well better learn how, or else the Red Cross isn't going to stand behind you when you crack those ribs.

Indeed, just aboutanyone interested enough in learning CPR is going to take the Red Cross classes, learn how, and be certified.

Those who aren't interested will probably not.

The ITU allowed no-code licensing above 420 MHz in 1947 and above 30 MHz
in 1967, I think. The first no-code licences were actually issued in
Australia in 1952, and the UK followed in 1963.

Of course, this time I don't think it will be another 50 years before element 1 will be dropped! The reason is that the ARRL did a 180 degree turn on code testing, which is what led to the no-code Tech. The FCC would have allowed no-code above 220 in the 70s. They proposed it and the league talked them out of it! The ARRL would have us beleive otherwise, but it's all on record.

It made less difference than it would have in, say, the 70s, and no-code HF now will make less difference now than it would have in 90s, much less the 70s. I'm not saying our hobby is dying, but interest seems to be declining.

I realize that--but of course plenty of people are interested in communication but not CW, and signify it by choosing to get a no-code Tech license.

Defining that as disinterest in "ARS" involves a question-begging definition of ARS to be "amateur radio communication in various modes INCLUDING CW."

Regards,
Len.

In a "sparkies" group that I occasionally get into, there are several who chase maritime CW around the world. The Cubans (CLA) have quit recently, leaving the Italians (IAR) as the only one left for regular commercial shipping on CW, although allededly the Filipinos come on from time to time. The Israeli and Indian naval stations are still active on CW but not for public correspondence.

This does not include still-licensed coast and ship stations in the US and Europe which - when operated by properly licensed ops in historic preservation groups - come on from time to time as special events stations (such as on Marconi's birthday) nor the pirate somewhere in the SE United States who comes on 500 kHz at midnight EST each New Year's Eve sending "CQ CQ CQ DE WAX WAX WAX TFC LIST QSW 463 KCS =" said call-sign having been that of a station (Tropical Radio Telegraph's service to the United Fruit banana boats) which was dismantled in 1972. Of course nothing is heard on 463.

Never mind. I thought this was the "When will Len Anderson deign
amateur radio with his presence" pool.

Hi,

What we'd like to do is use amateur radio for some university research projects. Specifically, we would like to use AR equipment in sensor network research. Sensor networks are basically like APRS without people at the transmit nodes, and more than just position information is reported (maybe temperature, etc). Also, multi-hop relay may be employed.

I've examined Part 97 rules and tried to read as many applicable threads as possible. My interpretation is that:

(a) automated transmissions are OK (with caveats)
(b) AR can be used for educational (non-commercial) purposes
(c) AR can be used for data transmissions, using encrypted authentication, provided the data payload is unencrypted

Part (b) is the most shaky becaues it seems to dependon "reasonable use" and other gray terms. Certainly my proposed use is not "hobby" but it seems to me to fall into the category of "experimentation" and (hopefully) "advancing the field."

What do you think of using AR bands for relaying sensor information for research purposes? Would an FCC Special Temporary Authority be appropriate/required?

Sincerely,

I don't see a problem with that, as research is what interests Amateurs.

> as possible. My interpretation is that:
>
> (a) automated transmissions are OK (with caveats)

If you don't use a specified code, you must identify using a specified code.
For example, if you design your own protocol (unspecified code), then you
should design the system to ID every 10 minutes, or every transmission.

> (b) AR can be used for educational (non-commercial) purposes

See below

> (c) AR can be used for data transmissions, using encrypted
> authentication, provided the data payload is unencrypted

Yes. Phil Karn proposed a DES authentication many years ago, however, I
don't see why just a plain old MD5 checksum of the data and the time-stamp
wouldn't fit most requirements.

> Part (b) is the most shaky becaues it seems to dependon "reasonable use"

> seems to me to fall into the category of "experimentation" and
> (hopefully) "advancing the field."

I don't see a problem in what you are proposing, and I think you could enlist
several amateurs who wanted to help. It goes without saying, that you would
need a ham license yourself, but that is pretty simple these days on a no-code
ticket.

Even if the money you use to buy the equipment, and power the equipment,
is grant money, it would be legal. Where you would begin to have problems,
is if you made the data proprietary, or sold subscriptions/membership/access

to say web sites where the data is stored. You could maintain a compilation type copyright, and restrict access to the raw data and software, if you provided say access to the processed data. I'm being vague, but the gist of it, is that you can't make money, and I never heard of a research program that did.

Do you have, or are you going to have, a ham license? Will all the
stations involved have a ham licensee on hand? If not you will run into
difficulties with the third party rules.

What you describe may fall under 'experimental'. But I would check with the
FCC.

You may want to try Mr. Hollingsworth at FCC and see what he says. He is
chief of enforcement, FCC. Or maybe he can direct you to the proper desk.

Keep us informed. This is interesting.

The same way that messages sent in Morse Code are "encoded".
Perfectly legal.

The old-time RTTY techs could read certain combos by ear, having
heard them so often, just as many of the international point-to-point
radiotelephone techs could "read" inverted speech after being exposed
to it long enough.

Just like high-speed Morse.....

>Now do you understand what I meant by "encrypted?" The average "public" in
>"scannerland" does not have the capability to monitor that traffic as we do.

They sure do. TNCs are cheap, and an awful lot of "scannerists"
have them if they have any interest in HF reception. Some of those
TNCs can decode protocols that the average ham TNC can't. Of
course, when the material is decoded, it usually turns out to be
"spook" quality encrypted.

If Morse wasn't prohibited in the maritime community after all the
ocean-going large ships stopped carrying Morse-qualified radio
officers and both the USCG and the public coast stations stopped
offering Morse service, what makes you think that it would be
abolished for the ham community when the requirement for Morse
testing is deleted?

The "CWDC" (CW Deprived Conspiracy) can try hard - it won't do any good.

Riley (who has plenty on his plate as it is) is in the Enforcement
Bureau, not the Wireless Telecomm Bureau that issues ham licenses
and interprets the rules thereof. He would not be involved in such
before-the-fact interpretations - it's the folks in Bill Cross' shop
at WTB who issue interpretations as to whether such operation is
permissible or not, and then Riley sees to the enforcement.

Off the top of my baldy bean, if there is any taint of remuneration
or pecuniary interest, I would advise a ham client that it would not
be permissable.

Then again, the wizards and wonders at the FCC's Office of
Engineering Technology have been known to issue Experimental
licenses for things which are the equivalent of attempts to mate a
zebra with a tiger.

Contact Carl Huie <chuie@fcc.gov> who is a ham and the guy in OET who
handles such things.

How do you think Tommy Lott developed ACSB when the land-mobile
big-three folks turned him down flat and he did the "research" for
the wannabee companies? Can you say 20 meters ?

Lots of us knew what he was doing but nobody wanted to blow the
whistle. Shame on me.

Then again, best to let that "creation" stay dead.....it's been about
25 years, and it never caught on, primarily because the manufacturers
who did fall for that scheme could never get the equipment to work
properly.

That should not be a problem. I envisage we would use an unspecified
code for our data transmissions, but we could self-identify with an RTTY
broadcast every 10 min. This will all be computer-controlled so that
should be easy.

> Yes. Phil Karn proposed a DES authentication many years ago, however, I

Our motivation for authentication is that we are concerned with
controlling access to the sensor network; for instance, we want to be
the only ones who can give commands to the sensor nodes, like "turn off."

> I don't see a problem in what you are proposing, and I think you could enlist

I should have mentioned, I have a NCT license: KD5SZT. Issued last
summer. That's a great idea, getting hams involved. I think it would be
a fun project.

> Even if the money you use to buy the equipment, and power the equipment,

Our goal is to provide a "service" to researchers; no compensation would
ever be accepted and the network is only for use in relaying sensor data
and sending commands to said sensors. Data produced would be freely
available. Sounds like our application is OK with the use policies.

Steve, thanks for your input!

Dan/W4NTI wrote:

I do have a NCT license. I can imagine getting my advisor to get a license, but I'm interesting in seeing if I can get around that. As I see it, there would be several autonomous transmitters (relay devices) and one control station, all of which would be under my control. As I do sleep some of the time, is that a problem? :)

> What you describe may fall under 'experimental'. But I would check with the
> FCC.

We want to design our system so that any manner of communication means could be used to ferry the sensor data (internet, etc). But for our initial experimentation, I think ham radio would be (a) very appropriate and affordable and (b) fun. We will probably use ISM for short-range communications and only rely on ham for longer range xmits.

I would say find a comercial frequency and use it. YOu did not mention the
frequency that you would be using . If under 30 mhz it will be would wide.
If in the UHF and above you may go ok. Just remember you will be subject
to a shared frequency and others may use that frequency.

Sounds like one way or beacon modes to me.

>all on record.

WHOA! Hold on a second there!

First off, The earliest "serious" proposal for a nocodetest license in the USA
was
in 1975. FCC wanted to create a "dual ladder" license system, with no less than
seven classes of license! This was only a few years after the Incentive
Licensing mess of the '60s. (If you think people are ticked off about the code
test issue, you shoulda been around back then.)

As part of this seven-class system, there would have been a "Communicator"
license with extremely limited VHF/UHF privs and no code test.

The response in the amateur community (not just ARRL leadership) back then was a resounding NO! FCC scrapped the idea.

Then in 1983, FCC started making noises about a nocodetest license, and again the response from the amateur community was a resounding NO!.

But in 1989-1990, FCC tried yet a third time and this time made it clear they really wanted a nocodetest amateur license. At the same time, they were proposing to reallocate 220 to other services. The response from the amateur community was no longer a resounding NO - it was more like "well, if the license has limited VHF-UHF privileges, maybe it would be OK". Specifically, feedback to the question "would you support or oppose a limited-privileges VHF/UHF only license with no code test?" was divided 50-50 yes-no.

So the ARRL BoD proposed a compromise: Create a new class of license that would focus on 220, increasing its usage. (The ARRL proposal did not include 2 meter privs for the new license). FCC saw through the plan and simply dropped the code test from the Tech. They compromised by only reallocating 220-222, not the whole band.

The recent turn-about in ARRL BoD policy was partly the result of a meeting of Region 3 IARU societies back about 2000. At that meeting, ARRL found itself to be the lone member supporting retention of S25.5. It became clear that "resistance was useless" and so the policy was quietly changed at the next BoD meeting from "support" to "no opinion".

None of this is secret or denied by the ARRL. It's all been in the pages of QST and on the website.

>> Was there a sustained increase in amateur radio growth because of those

>It made less difference than it would have in, say, the 70s, and no-code
>HF now will make less difference now than it would have in 90s, much less
>the 70s.

MAybe - we'll never know for sure.

>I'm not saying our hobby is dying, but interest seems to be
>declining.

I mean no disrespect, Alun, but in the 35+ years I've been a ham, I've heard that and similar reports. None of them ever came true.

What HAS changed is that some of the reasons people used to become hams have disappeared. If all someone wants is electronic communication, there are lots of other options, most of which either didn't exist or were prohibitively expensive only a few decades ago.

Example: In 1972 I knew a girl whose father wrote for one of the big local papers as TV critic. He had a Model 19 teletype machine in the dining room, complete with paper tape setup and telephone line interface. He'd write his columns, then punch a tape and send it to the office. He only went into the office once a week or so. Today all he'd need is a laptop and a phone line,

costing a tiny fraction of what the Model 19 cost.

Not in the sense that the FCC or most people use.

>are publicized. Look at PSK31 and the 15-20+ other variations of the
>digital modes, are you now saying all of those modes are illegal?

Encoded is the word you want. There's a BIG difference:

"Encoded" means that you need a decoder, but there is no effort to hide the
meaning or content from anyone with a suitable decoder, and all of the info
needed to build a decoder is publicly available.

"Encrypted" means you need some sort of decoder, AND information that is not
publicly available, in order to read the message. Encryption is done to hide
the maeaning and/or content of a message.
>
>When was the last time you listened to a packet signal being transmitted and
>could tell what was being sent as far as the content of the message, merely
>by listening by ear? If you are that good, you have my respect, as it
>merely sounds like a digital "blurb" to me.

True - but if you hook up a PSK-31 decoder, you can read the message. You don't
need a "private key" to make the decoder work.
>
>Now do you understand what I meant by "encrypted?"

Yes, but the FCC would not like that use! "Encoded" is much better.

>The average "public" in
>"scannerland" does not have the capability to monitor that traffic as we do.

The point is that if they bothered to hook up a decoder, they could monitor it.

You do realize, of course, that you are making a really good argument for the
use of Morse/CW to send such messages?

Dan,

That's the nuttiest thing said in this newsgroup in many moons.

Assuming your prophesy were true, of what benefit
would banning CW provide to anyone?

Cheers,
Bill K2UNK

I think 1000 MHz was in 1937. I left that out because no actual mew no-
code licences were introduced between 1937 and 1947 (the small matter of
WW2 got in the way!).

All the no-code licences in various countries introduced after 1947 and
before 1967 were originally for above 420 MHz, as permitted in Atlantic
City in 1947.

I am going from memory, but I think that I have that correct.

I think 1000 MHz was in 1937. I left that out because no actual new no-
code licences were introduced between 1937 and 1947 (the small matter of
WW2 got in the way!).

All the no-code licences in various countries introduced after 1947 and
before 1967 were originally for above 420 MHz, as permitted in Atlantic
City in 1947. If your timeline were right, they would only have been
allowed above 1 GHz, which I know is not correct.

I am going from memory, but I think that I have that correct.

OIt isn't just "people", it's voice mode yakkers exclusively. They don't know nor do they care about any of the many other digital modes which share that bandspace. They just know what CW sounds like and they hate it.

I think there's a difference between what we "must" learn in school for a
real degree vs. what we must know to operate as a licensed amateur. I don't
need an amateur license to "get by" in life. I do need my High School
Diploma, or better, to get by.

I don't have a problem with the CW requirement for an amateur ticket on its
face. However, if its primary purpose is that of "filtering" people from
the hobby, as many attitudes seem to demonstrate, then I am all about
getting the requirement outta here. I do not believe that a knowledge of CW
makes one any better a ham than any other. I also don't believe, as you
mention later in this post, that one's interest level is important to this
hobby.

But, who dictates that "interest" is a necessity for this hobby/avocation?
I don't care about someone's interest level. There are, what Jim/N2EY(?),
650,000+ amateurs in this country alone. Of them, there are numbers of
every kind of thinking and interest level, right? I don't care about
someone's "interest." I care that once they are a licensed amateur they
conduct themselves within the parameters of the FCC's R&R. That is all that
is required.

You are speaking of the written exam, and I think it should be made tougher
and harder to pass. But, I don't think there is a necessity to "test"
knowledge of a mode.

Ditto, ditto, etc. I think the written part of the exam should have regulatory questions, and a lot of them. I also think the written part of the exam should include more than just Part 97 of the R&R...what about the 1934 Act? Lots more on that.

The written exam should include a great deal of questions on the safety issues related the operating of amateur equipment and antennas, etc.

Much tougher written and wish there was a way not to have it published. But, that's me. YMMV

What does that mean? That his application is illegal, or you just don't
want him to experiment on the Ham bands?

> You did not mention the frequency that you would be using .

The only frequency he could use would be VHF and shorter wavelengths,
due to the automatic features he needs.

> If under 30 mhz it will be would wide.

World wide?? What does that have to do with anything?

> If in the UHF and above you may go ok. Just remember you will be subject
> to a shared frequency and others may use that frequency.

Duh... Although most VHF and UHF bands are about as empty as
the U.S. treasury, and two people using the same frequency would be as
likely as being hit with a metorite.

> Sounds like one way or beacon modes to me.

That's because you're very ignorant of the rules:

In the case of my radio, it's 500mW regardless of service (i.e. even on GMRS,
it's 500mW).
```

116. 5 MHz very popular and it's only a half hour old

> abolished for the ham community when the requirement for Morse
> testing is deleted?

Several things:

1) The number of ships is far less than the number of hams, and they're much more spread out.

2) For the most part, the systems that replaced Morse in the maritime services don't use the same frequencies as Morse did.

3) The driving force behind the maritime service changes is/was saving $$. Ham radio is different.

4) Some of us don't quickly forget statements like:

"no setasides for legacy modes!"

and

"those in the minority should learn to take 'no' for an answer and get on with life"

(those are just a small sample)
>
> The "CWDC" (CW Deprived Conspiracy) can try hard - it won't do any good.

Rather than an outright ban, we may see a form of "crowding out". There will be pressure to widen the 'phone/image bands still more.

It is interesting to note how many folks really think that the non-phone/image parts of the HF bands are "CW-only" and are completely ignorant of the fact that data modes are authorized on all of them.

I have to disagree with that, Bill! Plenty of nuttiness to go around
on all sides of the issue. Surrealism, too.
>
> Assuming your prophesy were true, of what benefit
> would banning CW provide to anyone?

Depends on who considers what a "benefit". Remember when the national
speed limit was 55, and speedometers on new cars had to stop at 85?
There were folks who saw those rules as benefiting society.

As Dan/W4NTI points out in another post, there's the issue of "more
room for 'phone", particularly to those who don't realize that there
are no CW-only HF/MF subbands. There are also those who want things
like DSSS on amateur HF, even though the problems caused by such
operation have been explained to them in detail.

Another "benefit" to some would be the fact that without CW/Morse,
quite a few hams would simply leave amateur radio. At least some of
the most experienced, conservative, competitive and knowledgeable hams
would simply pack it in. The kind who are sometimes called "elitist,
jackbooted thugs" "radio gods" "modem emulators" and other terms of
endearment. Which would suit a few folks just fine.

The amateur radio "culture" would change too, and become more
homogenized. Less diversity and variety. Some folks are afraid of
differences, y'know. Who was it that said 'those in the minority
should learn to take "no" for an answer and just get on with life'?

Now none of this means that those who are against the TEST are all
against the MODE, too - far from it. The anti-code folks are few and
far between, but they DO exist. To deny their existence is far
"nuttier" than anything Dan has written.

It's true that no mode except spark has ever been banned in amateur radio, and spark was only banned after practically everyone had stopped using it. But there have been movements to ban AM and NBFM phone from amateur HF, usually in the form of proposed bandwidth restrictions.

btw, Bill, have you picked a date for The Pool?

Section 97.113(c) prohibits transmission of "Communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer."

Are you being employeed by UC to conduct university research projects?

I would think that the University already has or can easily get non-amateur resources (both hardware and spectrum allocation) that would support your research projects. The challenging task is finding out who may have such resources. In addition to checking with the project lead faculty, you may need to check with the department head and the college dean. An often overlooked channel for information is contacting the purchasing persons at the department/college/campus levels. They know who requisitioned what. From there you can go to the requisitioners and find out what administrative activities they went through for licensing.

Good luck,

Duane Allen

Steve-
I knew I was inviting abuse when I asked the question. If you knew
a little about the GROL test you might not be so sarcastic.

I have a license to practice law also. States-wisely grant
recirprocity in many situations. I also have a severe learning
disability. So taking tests is a mamouth pain where I sit down.

States, and the Ferderal government have a lot of recirprocity in many
area from drivers licenses to professional licenses-just in case you
didn't know.

Not all of us can be or would be as smug just because one has an
amateur license.
Regards
Cappy Anderson

I'd be happy to have as many _questions_ on the _written_exams_ about
Morse as about each other mode. A ham should _know_about_ all the modes.
What offends a lot of us is a _practical_ test in only _one_ mode. To
take your example, if you had to track a satellite pass and work someone
via satellite to get a licence, and that was the only practical test, that
wouldn't be right either, as it would be an unbalanced requirement
relative to all the other things you can do in the hobby. If you want to
have a practical test, how about soldering? At least it's not mode-
specific.

I might beg to differ. I took many classes that were just about
irrelevant to just about anything. They were mandated to be taken
though. And that to me sounds just about like the arguments aginst Morse
code testing.

> passed the tests to advance, yet they are excellent hams.

No I am not! I'm saying that if you don't learn the prescribed items,
you are not all that interested.

Let's take the hot button Morse code away from the topic for a second,
and use the example posted by some other person here recently. In his
post, he mentioned that some Service buddies who already know Morse code
would take the ARS tests as a way of getting off base and for a change
of pace for a day. They did well on the Morse part of the test, but with
one apparent exception, failed the written exam.

Learning the written portions of the exam was not all that important to
them. After all, they were just doing this for a lark.

They were not really all that interested in getting thier ticket.

People who took the time to study and learn for the *written* portion
of the test had more interest in being a ham than those who did notwant
to take the time to study for the written portion of the test.

It is exactly the same thing. I've been careful to point out that my
argument is completely separate from whether Morse should be tested at all.

> Bottom line: Knowledge of morse is neither a positive or negative
> indication of any individual's interest(s) in ham radio.

It is if you have to pass a test for it before access.

I heartily recommend www.hamtestonline.com
It tracks your progress on each section. A
person might actually learn some of the stuff
with J.C.'s website. It is worth the money.

Bill

Kim,

Have you *ever* had the experience of "having to" try something you
thought you wouldn't like, and finding out you really enjoyed it?

Do you know anyone who has had such an experience?
> >
> > We all have to learn things that we may not like all that much. I had

That reasoning works to support Mike's argument. If a high school
diploma is a practical necessity, why should it require ANY
non-essentials? Those nonessentials could be considered arbitrary,
capricious, irrelevant, discriminatory, hazing, etc. OTOH, since a ham
license is not a necessity, it can require all sorts of stuff that
some would say is nonessential.

Not really a good analogy, because in order to parachute you have to
jump out of, or off of, something.

> I don't have a problem with the CW requirement for an amateur ticket on its
> face. However, if its primary purpose is that of "filtering" people from
> the hobby, as many attitudes seem to demonstrate, then I am all about
> getting the requirement outta here.

I think what really bothers some folks about the code test is the fact
that it acts as a "Great Equalizer". Very few prospective hams already
know the code, which means that, when starting out to get a license,
the Ph.D. in EE is placed on the same playing field as the elementary
school kid. It can't be learned (by most people) by reading a book or
watching a video, or picked up in bits and pieces here and there.
Guessing doesn't help you pass it.

Also, once you learn it, the code is extremely useful in amateur
radio. Particularly HF/MF amateur radio.

> I do not believe that a knowledge of CW
> makes one any better a ham than any other.

I think it does. Maybe not the test itself alone, but the USE of the
mode. It's a useful skill for hams to have. That doesn't mean it MUST
be tested, however.

> I also don't believe, as you

> But, who dictates that "interest" is a necessity for this hobby/avocation?

The FCC, among others. If someone is interested in the ARS, but does
not bother to get a license because they don't like taking (written)
tests or studying for same, then they are not as interested as someone
who does make the effort.

> I don't care about someone's interest level. There are, what Jim/N2EY(?),
> 650,000+ amateurs in this country alone.

686,802 as of yesterday. ;-)

But how many of them are active?

> Of them, there are numbers of
> every kind of thinking and interest level, right? I don't care about
> someone's "interest." I care that once they are a licensed amateur they
> conduct themselves within the parameters of the FCC's R&R.

OK, fine - now how do we assure that? Look at the enforcement actions by FCC - hams of all license classes being cited for doing dumb things. Each and every one of them had to pass a written test - in most cases, several written tests. Yet they break the rules, and in most cases the violations are not technical things like a misadjusted or broken rig. Instead, most of the violations I read about today are "operating" violations - jamming, cussing, failure to ID, operation outside of one's license privileges, etc. Really basic stuff that was covered at the Novice level.

Yet almost all of that stuff happens using voice modes, rather than CW or data modes. There must be reasons for the enormous disparity in behavior.

> That is all that is required.

So how do we get it?

Cappy - if you knew the history of another poster here named Anderson, who posts under several different names and causes a lot of H and D, you would understand Steve's comment. Perhaps Steve will explain it to you in e-mail.

> I have a license to practice law also. States-wisely grant
>recirprocity in many situations.

I've been arm-wrestling with the State of Oregon over granting reciprocity for my California bar admission for years. Even though the California Bar Exam is a lot tougher than the Oregon exam, Oregon will not grant reciprocity - or even provide the mini exam that California provides to Oregon licensees - because Califonia does not grant "clear" reciprocity as Washington and Idaho do. Who will blink first?

Anyhow, I practice Federal law (primarily before the FCC) with no problem but it's just a pain to deal with having to get a local attorney to handle local matters stemming from my FCC practice.

>I also have a severe learning disability. So taking tests is a mamouth
>pain where I sit down.

And I'm a senior citizen with limited eyesight on the reading level, so I too won't take any more written exams. I'd have no problem passing an oral exam but they don't do it that way.

>Not all of us can be or would be as smug just because one has an
>amateur license.

But the bottom line is that holding a Radiotelephone license carries no element credit for the Amateur license and vice versa, because the services and the things that are required to be tested for are radically different. I've held both for over 50 years.....

It was meaningful "in those days". The meaning was "if you want
the privileges, you gotta' pass the test."

Do not confuse my attitude about the test with the use/allowance of
the mode.

Yes, UC does have such resources, and the source of who has what
where throughout the UC system is the Office of the Vice President
of Administration, located on the UC Berkeley campus.

At least that's who we used to deal with concerning radio spectrum
assignment and licensing matters for the UC system.

If proponents of CW make full usage of the bands, then there
won't be a valid argument to widen phone segments. Remember
too that the non-phone segments also support data.

> It is interesting to note how many folks really think that the
non-phone/image

Exactly why I wrote the comment above. There are only two CW only
segments and all hams have access to them now... they are 50.0-50.1
and 144.0 to 144.1.

Cheers,

Yes you need the high school diploma to get by in life but you don't "need" a lot of the subjects that you are required to learn. How often do you use history in daily life unless you are a teacher or politician? Who needs to have knowledge of Shakespeare and other classic literature to get by in daily life? Yet to get that high school diploma (which you need), you have to take subjects that are "unneeded". However, they are considered part of a well rounded basic education so you have to take them and pass them to get that diploma.

Actually I agree with having a soldering test. I consider it a basic skill that all hams should have at least to the extent of soldering a PL259 connector to coax and demonstrating that they have achieved continuity and no shorts.

The difference between CW and satellite is that CW is commonly used (about 50% of hams use CW some to all of the time) and it is cheap to use. Satellite is uncommon and expensive. In addition, it takes actually having a basic, minimal skill level at CW to judge whether one wishes to pursue it to a useful level thus the prospective ham should be required to learn a basic minimum.

I would put it this way: If the University intends to patent any part of the research, then the ARS should not be used.

Actually that says it all, Mike, and is the point I've stressed for a long time
that is always pooh-poohed by the code/code test bashers. They just won't
recognize it for what it is.

Or maybe they *can't*.

The bandwidth is NOT exclusive to CW today. In the end, if the non-phone
segments aren't used then the expansion of phone might be considered...
but the FCC isn't going to ban CW to make it happen. That's just more
"chicken little" talk.

Cheers,
Bill K2UNK

Bottom line...exactly what chance of approval would you give
a petition for rules change that would outlaw CW in the next few
years?

> It's true that no mode except spark has ever been banned in amateur

AM phone...excellent example of an ancient mode that some
would say should be banned but is still allowed 40 years after
the major shift to SSB.

> btw, Bill, have you picked a date for The Pool?

I need to understand the treaty approval process before picking a
date. For now I'll target 1/1/04.

Cheers
Bill K2UNK

So a nocode tech has no interest in amateur radio because s/he
didn't take a morse test then? Bunk.

Same old, same old.

Cheers,
Bill K2UNK

Now isn't it interesting that the 5 MHz difference (462 vs 467) makes such a
distance difference..... :-)

Note: The following is just my interpretation of the rules.

In article <bdvrsrcit1@woodrow.ucdavis.edu>, Leo Szumel
<please_use_my_last_name@ieee.org> writes:

>> If you don't use a specified code, you must identify using a specified
>code.
>> For example, if you design your own protocol (unspecified code), then you
>> should design the system to ID every 10 minutes, or every transmission.
>
>That should not be a problem. I envisage we would use an unspecified
>code for our data transmissions, but we could self-identify with an RTTY
>broadcast every 10 min. This will all be computer-controlled so that
>should be easy.

I think there's a problem with using a code that is not publicly available. ID
is not enough; if the message cannot be read by a suitably-equipped monitoring
station (read: FCC) what you have is a form of encryption.

Amateurs are not allowed to intentionally encrypt or otherwise conceal
transmission meaning or content, with one exception: remote control commands.
So the "turn off" command would be OK to encrypt, but not the data coming from
the remote sensors.

Yep, sure is. You still alter what is said to mean that which was NOT said. Or
maybe you
don't get it.

A no-code tech has a limited interest in ham radio or he'd become something
other than
a no-code tech. WITHOUT whining about the requirements. And many do just that.

And I don't think there is anything at all "wrong" with the way you chose to do it. BUT, I also know you're not one of those hams who believes you're better than any other...

Mike, I think you'll be quite disappointed if you "trust" in someone's
interest level based on their relationship (or lack of) with CW.

You really think that just because someone learns CW, they have "more"
interest in ham radio? You really do, Mike?

Oh well...

Kim W5TIT

152. Is that digital sounding chirping on the new 5MHz freqs the primary user?

Newsgroup: rec.radio.amateur.policy

Sometimes I hear a piccalo-rtty-ish digital signal on one or more of our new
5Mhz frequencies. Is that the primary user of these freqs trying to use
their
allocations and hams clogging the channel? Or is it from outside the USA?
The signal strength is weak, so maybe it is from region 1 or 3.

Here's the rewrite of 25.5 and 25.6

The IARU web site has release it final report on WRC 2003.

You can read the full report at: http://www.iaru.org/rel030703.html

The final version of S25.5 & S25.6 are:

25.5 &#65533;3 1) Administrations shall determine whether or not a person
seeking a licence to operate an amateur station shall demonstrate
the ability to send and receive texts in Morse code signals.

25.6 2) Administrations shall verify the operational and technical
qualifications of any person wishing to operate an amateur station.
Guidance for standards of competence may be found in the
most recent version of Recommendation ITU-RM.1544.

They say the effective date is July 5, 2003.

Cheers,
Bill K2UNK

I'll truly have to get back to you on that! Just sitting here thinking
about it, I can come up with more examples of things that I knew I would not
like that have come true:

1. Moving to Texas. Yes, I have "become accustomed" to being down here.
But I'd much rather really be right back up in my hometown with the
Battenkill River, Goose Egg Mountain, the Vermont border in eye's sight,
etc.

2. Working in downtown Dallas. Again yes, I have "become accustomed" to it,
but I knew I would not like it and I really don't. It's just that the
darned money is so good, 'spose I am willing to sacrifice a little to have
the money...

3. Having kids. Seriously. All the time I was growing up and as a
teen-ager, I knew I would not like having kids. Well, I tried a couple out.
I love both of them dearly and my granddaughter is divine--but I'd never go
through having kids again if I could go back and knew then what I know now

>
> That reasoning works to support Mike's argument. If a high school
> diploma is a practical necessity, why should it require ANY
> non-essentials?
>

Oh, well. I don't think it should. I think things such as Sports and Band, etc, (the so-called extra-curicular activities) should be in there--as I think they help form skills that will be needed in the world. But, in the regular K-12 school years, I think things such as elective courses really need to be "rethunk." I took Greek Mythology, Philosophy, Psychology, etc., in my years of High School, but I really don't think they should have been available and don't think they should be today: EXCEPT, perhaps, in magnet schools (down here, the term magnet school, defines schooling set aside for "gifted" children).

>
> Those nonessentials could be considered arbitrary,
> capricious, irrelevant, discriminatory, hazing, etc.
>

Exactly, and I think they are to some extent, at least on a regular campus. Those of who were involved in classes such as Latin and, well, the "renaissance" courses(?) were considered quite the nerds--and we considered anyone outside our circle as squares. There was nothing to teach us that people have different interests and that all are OK. Well, at least nothing taught more strongly than teen-age hormones raged! LOL

>
> OTOH, since a ham
> license is not a necessity, it can require all sorts of stuff that
> some would say is nonessential.
>

And, does. And, again, I think the non-essential stuff should be removed. I'd rather see a majority of hams define what is non-essential, though; and I'd like to see those decisions being made without ego or prejudice.

>

To the extent that meeting requirements could be considered as indicating
interest, I suppose you have a point. I was thinking more in terms of, if
the requirements were reduced, would it mean there were "less interested"
hams? Heck, for me, anyone who persists through the brickabrack that
happens in this hobby is surely demonstrating an increble interest!! I have
practically given up on ham radio. Between my husband and I, there is not
one radio (of about 25) that is connected right now. It's just too damned
much of a political hotbed for anyone who truly wants to be involved in ham
radio (at least around here).

Well, adhering to the FCC R&R is not a choice. At least it isn't if one
gets caught. And, if more hams were willing to "snitch" on each other,
there'd be a better chance of catching those who don't abide by regulation.

And you obviously can't regognize that taking a series of written exams
proves probably more interest in ham radio than one single CW test.

OK. So we're picking dates for when the CW requirement (as it exists now)
will be dropped? Gosh. I think it's going to take a lot longer than a
year. Let's say five years; so, by June of 2008.

Heh heh, the real test here is whether many of us will be around RRAP to
roundabout on it when it happens, unless it does happen in the short term.

Which publication? A letter ruling covers you. Nothing
else from the IRS will provide protection. The publications
can be wrong. If it is not a regulation, section of the code,
or some solid legal point based on a case in YOUR circuit,
then you have nothing solid.

Yes, you would be fined. A google search to unearth this
thread would not help your case, either. :)

Ridiculous.

Why are you guys so confident with your interpretation of the law? You are so confident that you even think I have already bought your theory?!

Did I EVER post in this newsgroup that I agreed with any of you many 'experts' here?

Did I ever post in this newsgroup that I believe the FCC's response is wrong and you guys are right?

Did I ever post in this newsgroup that I will take your words instead of FCC's?

Come on, you guys weigh yourselves too much.

Since some people here are really so **stupid**, I would like to reinstate my position on this whole license issue:

1. I don't believe the interpretations, responses from every single person who thinks I need a license. I don't believe them from the very beginning. I have never believed them.

2. I take the official words from FCC as 100% correct. I never doubt them. And I will follow them. It's funny to see someone simply can't understand one of my arguments based on an imaginary scenario in order to disprove my opposite opinion.

3. My original question was my first post in this group. Now I will opt to leave this group for ever, based the number of ridiculous posts here. I will find a more intelligent place with more **human** common sense.

4. Although I don't believe the responses from many anonymous, and/or unauthorized, and/or unofficial, and/or over-confident people here, I really appreciate your helps. Thank you. Thanks a million.

Tom

Goodbye, Tom. Remember that if you ever need a communications
attorney to represent you in an FCC case, that's what I do for a
living, whether you "like" or "agree" with my interpretations or
not.

Well Kim, the ITU have actually abolished it effective July 5th, 2003. Do
you really think it will take the FCC five years to implement? I don't
think that even they are that slow!

I know quite a bit about the GROL, and I have stated that I think
there SHOULD be some sort of "bridge test" for GROL holders, ie:
questions on Amateur related regulations and practice.

> I have a license to practice law also. States-wisely grant
> recirprocity in many situations. I also have a severe learning
> disability. So taking tests is a mamouth pain where I sit down.

Is it any worse than being deaf? I know CW ops who have no
"conventional" hearing yet they are able to operate CW and have passed
the requisite test.

I also know Amateurs who are blind, and they have passed the
requisite written tests.

> States, and the Ferderal government have a lot of recirprocity in many
> area from drivers licenses to professional licenses-just in case you
> didn't know.

I am quite aware. I also hold professional licensure that
requires various endorsements for reciprocity. PITA, but that's the
problem of living in a Republic.

> Not all of us can be or would be as smug just because one has an
> amateur license.

You need to know a bit more about the histroy of another Anderson here who is a bit more than "smug" to understand the "humor" of the moment.

I wish you well in pursuit of an Amateur license, and I'd support any RM or NPRM that the FCC issued suggesting such a GROL/Amateur bridge test.

Tom -- this sort of thing happens in all walks of life. family, friends, strangers, at work, church -- just about every where. Just a slice of life. Get used to it.

As you did -- best go to the Horses mouth. Seek recognized credible sources.

The best posters on the NG's back up there advice with credible sources, others just guess, others harass, others don't know but think they do. Ignore the guessers and harassers. After all you did get the right advice -- Write the FCC.

Lots of very good advice can be found on the NG's, but one must weed thru the others.

After all it is free and unmoderated.

Keep the faith and enjoy the radio. Hope a Ham license is in your future. Lots of exciting modes and things to accomplish within that discipline.

And all the junk from the legal beagles and tax arguments should have been else where.

Perhaps rec.law. controversy -- NOT HERE -- but oh well.

The ANON posters such as myself don't want our mail boxes full of hate mail and we don't want spammers to have our address. I had over 200 spams a week from Asia, mortgage companies, Hams selling something, et al. So try to keep a low profile.

Kim has a point, Alun, but I think 5 years is a bit much. Look how long it took
'em to do the Restructuring. And we're still waiting on some NPRMs.

But I'm sticking with the date I posted. Less than a year.

I think the FCC's hands are tied until the treaty is ratified. Then all it should take is what I remember being called an "Executive Order" dumping Element 1.

It could be as simple as 'Effective (fill in date here), completion of Element 1 is waived as a license requirement". One sentence.

We'll see. I think it's going to depend upon the fervor for which the amateur radio community approaches the FCC and all that bit of "stuff." Tradition is a strong thing, and I think tradition may have a lot to do with how timely the cancellation of a CW requirement will be.

And if you do decide to try and operate, BPL is sensitive to ham transmissions. When you shut down Internet access for blocks and the power company blames you the "social" consequences will be huge.

I think the FCC will, at minimum update, Part 97 for the WRC 2003 changes.
They could do it with a "Memorandum Opinion & Order", or update Part 97
and restructure frequency allocation with a Notice of Proposed Rule Making.

This should be a hot topic at the VEC conference held at the end of July.

I would not expect much action until August. But that just a guess.

Back at 'cha, Bert. And here's to freedom of CW!!!

11 meters has been hopping. Made a contact in Missouri, then turned off
the noisy radio, and spent the rest talking to all the guys on 2 meters.

It's nice to have some more bands to use when one is trashed...

But, Kim, if he was forced to learn it, so should everyone else.
What's fair is fair.

I know more about radios and electronics then these appliance
operators getting Generals and Extras. How 'bout we drop the
code, and add an Element 5, that can't be studied for because
the questions aren't passed around beforehand? Make sure one
really knows his/her technical stuff before allowing a super
extra class license. How about essay or fill-in-the-blank
type questions instead of multiple-guess type questions?

I thought the Technician test was easy. I didn't even study.
The questions on the General I saw while waiting, were easy
looking. The guy across the table didn't know about skip
propagation. Of course, I couldn't help him...

>how timely the cancellation of a CW requirement will be.

Look at how much effect 'tradition' had on the restructuring. Zip, nil, nada.

The restructuring R&O made it clear, IMHO, that the one and only reason FCC
kept Element 1 was the treaty requirement. It would be illogical for FCC to
keep Element 1 now that there's no more treaty requirement. Even though we're
talking govt. regulations, I can't imagine FCC being that illogical and
reversing itself.

True, but that was for a *reduction* in the requirement. I'm not so sure there will be major support for a complete elimination of the CW requriement--in some form or another.

The pity is that we must go through this again. The amateur community is still not over the backlash from the changes a few years ago.

heh heh, and that was tongue-in-cheek, right? The FCC is a government entity=large corporate entity. Right? At least that's the way I see it. I wonder how much shareholders realize that there is complete insanity inside the realm of large corporate entities who constantly spend huge dollars on organizational/operational changes, often just to change again in less than a year!

The Senate must ratify the changed treaty, and IIRC a certain
number of the signatory Administrations have to ratify (or whatever
they do to accept the treaty in their own countries) for the changes
to go into effect.

In essence, the signatories in Geneva are saying "we'll take it back
home and see what the (monarch, parliament, soviet, whatever) thinks
about it".

I just hope that it gets speedier and more respectful treatment in
The Senate than the 1979 WARC treaty did.

"Executive Order" is what its name implies - and order by the
President. Regulatory agencies don't work on that level. It will
be an Order - probably by the Chief of the Wireless Telecomm Bureau
or even the Division Chief under delegated authority. If we're
lucky it will be without NPRM or NOI because it removes a burden
on the licensee.

>It could be as simple as 'Effective (fill in date here), completion of Element

> Same old, same old.

Gee Bill, that ain't been said! Lets see if I can help out here....

I was a NoCode Tech once. I was interested, and took the test necessary to get that license.

Then I was interested in getting my General ticket. Here, I needed to learn Morse code in addition to another written exam. But I was interested, and learned and passed the tests (flunked the MOrse first time around) I got the General ticket.

Then I was interested in getting the extra frequency bandwidth and whatever else that the Extra ticket gives. So I studied for and passed the test.

In each case, I was "interested" in something. I could have stopped anywhere along the line, and while exercising my right to not learn something, the only effect would have been to not get the license.

Would you agree that a person who takes the Extra test is more interested in getting the Extra ticket than a person possessing a General license who does not want to because they won't get all that much in the way of privileges?

What I find strange is that some who are distinctly anti-code test are having trouble with what I am saying here.

It is either that I am having trouble expressing myself, or that some folk are just not going to hear what I am saying no matter how many times I say it..

Okay one more time. Two young ladies are thinking about getting their drivers licenses. Ida Know wants to get a drivers license, but she is terrified of three point turns, to the point that she says "Forget it,

I'll just walk or take the bus".

Her friend, Ella Fyno, is also concerned about the three point turn. But she decides that even if she hardly ever uses the three point turn, that she'll buckle down and learn how. She works on the three point turn, eventually passes her license test, and now is happily driving.

WHO was MORE interested in getting that drivers license?

It's not a comparison of the relationship of driving a car to an Amateur license, or silly names I come up with. It is a question of different people with different levels of interest in something.

Not the CW, Kim. It's any part of the testing regimen that a person "won't" take. If a person refuses to take the Extra test, they aren't that interested in being an Extra.

Let's even take your own case. You're a Tech Plus, IIRC. Are you interested in taking the General test? If yes, you'll be studying for it. If not, then you aren't that interested in becoming a General.

As long as it is one of the requirements, most certainly it is! I don't care if a person ever uses Morse code aftward, but as long as it is a test requirement.....

Take my case. I'm a pretty smart guy, despite a person here who thinks I'm a hockey puck. But picking up Morse code was really difficult for me. But I really wanted that ticket, so I learned it. The Written parts were a breeze.

Now let's say I figured I'd just wait till the Morse requirement went away before I went to the trouble of testing. That would have meant that I was interested, but not interested enough to study for and take the test - I was just as interested in waiting.

It isn't weak in the Midwest, in fact I've already wondered if hams are causing interference to it since you can hear a few QSO's right along with it. May be we'll hear about all that interference we're causing, maybe not. We probably aren't interfering with the transfer of their data communications, but they might not like hams talking over their digital transmissions.

Well, our definitions of "luck" may differ, but I would be surprised if FCC does the whole NPRM dog-and-pony show.

They'd prolly make it a little longer, deleting the Element and its references in the Part 97. But the above would have the same effect.

I have BSEE and MSEE from University of Pa. and Drexel, respectively. Also can do 40 wpm Morse and build my own ham rigs. (It ain't braggin' if ya really done it...)

The big problem with essay and fill-in-the-blank questions is that the answers are not 100% objective. There's always a measure of judgement involved.

For example, take a simple question like "what is the length of a half-wave dipole cut for 7.1 MHz?" With multiple choice, the QPC says that one answer (say, 66 feet) is the correct one and all others are incorrect.

But with essays and fill-in-the-blank, what tolerance do we put on the correct answer? Is 67 feet acceptable? 68 feet? 66 feet 3 inches? The person being tested could write a long dissertation on tapering elements, the effect of ground, wire/tubing sizes, etc., and come up with a whole raneg of arguably-correct answers.

And that's just a simple question. When you start getting into explanations and diagrams, it gets really hairy.

From what I have researched, FCC went to multiple-choice questions for all ham exams no later than 1961. At least 42 years ago, probably more. Try convincing them that they've been wrong all this time.

FANTASTIC! This effectively doubles the amount of 7 MHz spectrum available to
amateurs on a worldwide basis!

40 is one of the best all-around bands. It's good for domestic and DX work. You
can get out with limited power, and the antennas aren't too big. Almost always
usable around the clock and around the sunspot cycle.

The only thing wrong with 40 is there isn't enough of it.

> About time

Dang straight. The nonsense of sharing with megawatt SWBC has gone on since
before WW2.

Now to get the resto of the band for regions 1 and 3.

Naw, Mike, they just don't wnat to hear it, then now and never. To their good fortune, history has finally caught up with them in a way they were never able to keep up. It's an accident of the evolution of technology. But nothing has changed. CW is still just as useful and versatile as ever. It's just that they still won't ever understand, and now no one will insist that they even try.

Big time! You can't even get objectivity on multiple guess. I remember
the first technician job I got. I had to take a test, and one of the
questions was "What temperature does solder melt at?" There were several
different answers to choose from. I kind of though it was a trick
question, so I answered "Yes". The supervisor went over the test with
me later, and noted the odd answer. I told him that any of those
temperatures would work, depending on the alloy of the solder. He said I
was still wrong, that the answer was such and such. I told him that was
okayu for 60/40 solder. He told me I was still wrong. I wanted to keep
the job, so I said "Okay!"

Yup. Go check out rraa. There is a former member of this group involved
in a months long debate. Just as a sample of the lengths some will go to
to prove they are "right". Who would arbitrate contested answers?

They aren't wrong. There is a certain temptation to expect new hams to
be great whizzes at RF. Those tests are only the beginning......

Awesome! Thanks for advice!

As of yesterday, I was thinking I'd have to retest for everything , so I downloaded the new tech pool from ARRL. Taking that test is going to be no problem. I think i could get a 80 or 90 percent if i had to answer the whole 500 or so question pool now now.

So like you say, mabe start studying for the Extra also. Why not.

Just to be sure, do you know of any web sites that throw 35 questions at you and grade you?

Oh yes, and if I give the VE the 1986 licence will he know my most currently expired one is from 1989? (from some data base or something), giving me only Element one.

Again, Thank you kindly
Brian

Ok now how about this?

My license is now expired, but....

I have sitting on my desk:
an origional 01/14/86 issued "Technician License" and
an origional 07/11/89 issued "Technician License (address change)

If i gave to a VE the earlier issued lic. do I get credit for elements
1 and 3, giving me a general class now? With no retesting?
I think at that time gen and tech written were the same, only
needing faster
code for the gen.

Or
If i gave the VE the latter issued lic. do I get credit only for the
code, meaning i must retake the written tech and general?

Help!
Brian

aaaaaw! whats the matter little boy? you get spanked again?

The fact is, I can work anyplace I want within the part 97 rules and the bands I am authorised on (6 meters and up). I have to worry a little about power output, but thats not much of a problem considering. Still, I worked a place on 6 you couldn't get to on 11 meters.

Oh yeah, aren't you the one thats been spam flooding the various rec.radio.* groups lately (seem to see your name in there a lot).

besides, if you can't run with the big dogs, don't get off the porch!

Ladies and Gentlemen of the Commission, Greetings,

While I appreciate the concerns of the persons who approach you on this occassion and request an FCC-determined bandwidth limitation for Amateur Radio HF applications, I must object to the concept and principle.

Although there have been some persons who have used inordinately wide modulation techniques in order to be intentionally disruptive, I believe the Commission should act to punish those who do so...NOT to limit the opportunity of legitimate experimenters and afficionados of various modulation techniques.

This mode of "wide fidelity" for SSB techniques should, in my opinion, be subject to the same cooperative band planning (so-called "Gentleman's Agreements") that the Commission recognizes and encourages for any other modulation or emission type except where overwhelming band constraints exist (ie: the already narrow "WARC" bands and the new 60 meter channels)

Thank-you for this opportunity to participate in the democratic process of our Government.

I am up for it...Questions that only active Amateurs and those
who continue thier electronics "education" would be able to tackle.

I'd also like to see the ARRL install "code testing" at
ARRL-sponsored hamfests akin to thier on-the-air code proficiency
program...Obviously NOT for official VE purposes, but just for the fun
of it...

Balogny... What this states is that all non-coded techs
have insufficiient interest in "ham radio." Note the above
does not specify any license level whereas below the
poster changes to a specific referral to Extra. That is NOT
how the original post started out.

> > Mike, I think you'll be quite disappointed if you "trust" in someone's

So what. They may have less interest in Extra, but
that does not equate to a broader lack of interest
in "ham radio" (rather than just Extra) as the original post
was first articulated.

> Let's even take your own case. You're a Tech Plus, IIRC. Are you

Fair enough on the specific application to General. BUT, would
you state that Kim doesn't have a positive interest in "ham radio"
just because she doesn't upgrade?

Cheers,
Bill K2UNK

The problem is that Dick believes he can define "limited interest in radio"
to anyone who doesn't upgrade all the way to Extra. That's a crock!
If I take Dick's mindset, then I have never met any ham that could not
be catagorized as having a unlimited interest in ham radio simply
because I have yet to meet any ham that has done and/or has an
interest and practices ALL modes of operation on all available
bands.

>requriement--in some form or another.

The majority of comments to the Restructuring were for at least two code
speeds. FCC said no.

IMHO the majority opinion today, even among those who haven't taken a code
test, is that Element 1 should stay. But there is no requirement that FCC
follow majority opinion.

And we may not even get the chance to express an opinion. Once the treaty is
ratified, FCC has the authority to simply dump Element 1 with no NPRM or NOI.
>
>The pity is that we must go through this again.

Tell it to those who will write the proposals to dump Element 1

>The amateur community is
>still not over the backlash from the changes a few years ago.

Heck, there are some who are not over the changes of 1968-69 - even though they
were not hams back then!

You think this is bad, Kim, you shoulda heard the wailing and moaning and
gnashing of teeth back in the '60s when "Incentive Licensing" was proposed and
enacted.

>> The restructuring R&O made it clear, IMHO, that the one and only reason

All true. But in the area of code testing, FCC has been constantly moving in
the direction of reduction/elimination for at least 28 years.

Of course that doesn't mean they will act logically now that the end is in
sight.

Are you saying we should keep Element 1, Kim?

I don't think that's much of a factor, Robert.

Look at the history of code testing, and amateur license testing in general, in the USA over the past 28 years. FCC has been slowly nibbling away at it, or trying to, since at least 1975. Little by little, the requirements have been reduced and the tests made easier to pass until now the single remaining test is about as basic as can be made. The only exception is the removal of multiple-choice code tests.

I doubt very much that FCC will change direction at this point.

Look at the thread title, Bill. "CW Requirement Abolished" - not "Treaty No
Longer Requires Code Test" or "S25.5 Revised" or anything like that. The casual
observer would think the code test is gone. Not yet,

>Clearly the issue of code testing now becomes
>a country by country decision.

Only once the new treaty is accepted by the various countries.

Brian,

The earlier license carries credit for Element 1 (5 wpm code) and Element 3 (General written). See paragraphs (9) and (8). But it does not carry credit for Element 2 (Technician written!). Even though the Tech and General written were the same in 1986, they're not the same now.

So the thing to do is to brush up on Element 2. It's 35 questions, multiple choice, and the Q&A pools are available for free download at several websites. You can also do online practice exams for any written element to see how well the studying is going.

When you're ready to try the Element 2 exam, go to a VE session, present your 1986 license and take Element 2. Once Element 2 is passed, you'll have a General.

In fact, while you're there, try Element 4 (Extra). Costs nothing but your time, and you might wind up an Extra.

But the "will" of the amateur community doesn't make
the rule or rule change. As Jim noted, the FCC already
weighed in on morse testing not being required EXCEPT
to meet the former treaty requirement S25.5.

> The pity is that we must go through this again. The amateur community is
> still not over the backlash from the changes a few years ago.

Don't let the rantings in this newsgroup serve as an indicator.
I hear nothing being discussed on the air and even if a few
diehards are pissed off, they'll either get over it someday or
die with their own complaining attitudes.

Here's the question?
Tell us WHY the FCC wouldn't dump the code test now?

> > So the big question is: What OTHER changes should be made?

None are really needed at all. Some might make sense, but
there's really no reason why 5wpm couldn't just be dropped
totally with no other changes needed.

Cheers,
Bill K2UNK

Do you seriously believe that the 200 thousand or more
non-code techs support keeping element 1? And, as you
note below...this ain't no ballot issue.

> And we may not even get the chance to express an opinion. Once the treaty
is

I must be living in a cave then as I've
yet to meet anyone that wasn't a ham
prior to 68/69 yet is complaining
of the changes made then.

> You think this is bad, Kim, you shoulda heard the wailing and moaning and
> gnashing of teeth back in the '60s when "Incentive Licensing" was proposed
and

BUT that denied existing privilegs to many hams...espeially Generals.
No such LOSS of privileges would accompany the end of Element 1.

(SNIP)

Sorry, I take that back. Although there are more fitting times when you did deserve it, on this occasion it does not necessarily deserve a HaHa.

Too bad. Now it has lost its impact. I already said that (HaHaHaHaHa!), so now I can't say that again when it truly does apply.

I'd think that they would just edit the list of requirements for the
various ham
licenses. The code requirement would just be deleted. It would go from

Tech: element 2
General elements 1, 2 and 3
Extra elements 1, 2, 3 and 4

to

Tech element 2
General elements 2 and 3
Extra elements 2, 3 and 4

Where element 1 is the 5wpm code, 2 is tech written, 3 is general
written, and
4 is the extra written.

Now that the novelity of the new band is wearing off, I think hams are
starting to avoid the
channels with the digital signals. As secondary users, we are supposed
to avoid interfering
with them, and accept any interference from them to us.

BUT, Mike, it sounded (and still does just a little bit) that you weren't comparing license level interest to license level interest. It sounded more, to me, like you were comparing Novice in ham radio is less interested that General in ham radio.

I would say to you, if you in any way think like that, that I know many higher class licensed individuals who have a long way to catch up in the drive and ambition I had (had=past tense) to promote amateur radio. I was *very* interested in ham radio--probably more than any other ham I personally know.

The drive to "get more" doesn't equal a level of interest in amateur radio. In my opinion. Your drive to become an Extra sounds more like an ambition

to thumb your nose at those who did not.

Wrong again, Bill. I define limited interest in ham radio as limited interest
in ham radio.

>
> If I take Dick's mindset, then I have never met any ham that could not

There's your crock! Some of you guys who have a 'special' attitude
toward Morse code seem to have other kinks as well.
There are Freebanders who have an interest in ham radio, some of them
have posted here. I suppose they have just as much interest as a no code tech or
an extra, by your measure. The small matter of a license must not matter.
If one has ANY interest, he has just as much as anyone else!
Are you awake yet?

Then, I would suggest that both of you carry your angst out on the populace of the entire community that has not even chosen to take a ham radio exam!

A no-code tech has a limited interest in *becoming a General Class, or above, licensee* and that is it. For someone to believe that interest level in ham radio as a whole is guided by how "high" a license class someone is, is absolutely ludicrous.

I would daresay that, if one could accurately measure somehow, there are no doubt a higher PERCENTAGE of General-and-above hams who aren't even active any more. Note that I have said percentage, so it has nothing to do with numbers. So, how would you geniuses explain that a Extra class ham has so much "more interest" in ham radio that they've DROPPED OUT of the hobby, while a Novice or Tech is still in?

Good grief.

Mike, you keep bouncing back and forth between whehter your issue is that someone who doesn't take a General exam is less interested in being a General, or someone who doesn't take a General exam is less interested in *ham radio*.

Thus, I give up even trying to understand your issue.

Eliminate the code testing requirement for the <written> license classes.

Yes that's what they should do. Basic integrity in Amateur Radio testing
requires that. The code should not be in the path way in between the written
tests.

Code has nothing to do with the written material. It's a different kind of
skill. And it's a single skill independent of other skills. Just as various
awards are recognized individually, like Worked All States, one can recognize
code skill separately from the written tests.

EXACTLY. I'm waiting to see (re: another post in this thread from me) when the campaign is going to start against everyone who's *"never bothered"* to TAKE a ham radio exam. And, how can it be *"explained away"* that there is probably a higher percentage of General-and-above license holders who are no longer even active. WOW, now that's interest for you!

THEN, and not least of all, I agree Bill. These guys are bouncing all over the topic.

THANK YOU!! Let's see what the answer is. Because, I'm willing to bet that the answer is going to do one of two things: 1) it will skirt around the question entirely and never be answered or, 2) it will be totally ignored.

I don't think it'll matter much. 7.2-7.2 has long had a full share of SWBC
anyway, and it wouldn't surprise me to see the BC units that move to just move on up above 7.3, assuming
that as a possibility.

Whoops, I came into this thread late, Jim, so please forgive (I had to find another thread with a semblance of logic to it...whew). OK, I notice that the poster said his license is now expired (but I'm not sure if how long it's been expired).

I am "coaching" a former ham. His license expired well over 2 years ago and he was a pre-1987 Technician. I told him he needs to re-enter the hobby fresh, as if he'd never been there.

Was I right?

>And you obviously can't regognize that taking a series of written exams
>proves probably more interest in ham radio than one single CW test.

That depends on the written exams, doesn't it? Big difference between a nobrainer exam and one that requires real understanding of the material.

For example, one problem could show a known voltage source and two resistors of a given value, and ask what the current flow is. Another problem could show a complex network of sources and resistors, some known, some unknown, and ask what value(s) of certain components are needed to cause certain voltages and currents to appear elsewhere in the network.

And that's just ONE question. Imagine an exam full of questions of that complexity.

Q&A pool? No biggie - just have a couple hundred network problems of the type described above, all with different topologies, values and solutions.

How about Smith Chart questions? Same principles apply.

But the current writtens aren't like that.

The key point is that most prospective hams have to learn code from ground zero, but don't have to learn the written material that way.

Then again, there could be questions like

"what is the air-speed velocity of an unladen sparrow?"

Where did I say insufficient, Bill? I'm talking levels of interest here.

```

The tech might be interested in only the things that the technician license gives him or her. The person who wants to experience more of what the ARS has to offer will be *more* interested.

I feel sorry for the person who is *more* interested, but won't get involved. I have to say that doesn't make much sense to me either.

I think Kim probably does have a pretty positive interest in Ham radio. But I would hazard a guess that it isn't as intense as say mine. As far as I know, she is content with her current privleges. To me, she is operating at her present interest level and is happy with that. And that is just fine.

I think you are getting my "levels of interest" idea mixed up with some sort of positive/negative thing.

Hardly! I'm not preaching condemnation on anyone because of their lack
of interest.

> A no-code tech has a limited interest in *becoming a General Class, or
> above, licensee* and that is it. For someone to believe that interest level
> in ham radio as a whole is guided by how "high" a license class someone is,

I was a no NCT. But my interests extended beyond that. If they didn't,
I would still be a NCT.

> I would daresay that, if one could accurately measure somehow, there are no

> while a Novice or Tech is still in?

It is entirely possible to *lose* interest also. If the ham becomes
inactive, that is the case. It's a dynamic sort of hobby. I would say an
Active Extra has more interest in the hobby than an inactive one.

Let me phrase the issue as I see it.

People often have hobbies as a part of their spare time.

Generally, a person takes up a hobby that interests them.

If there is some requirement of the hobby that the person does not
like, they have two choices put up with the requirement or not get
involved. Examples might be I though about getting a pilot's license at
one time. But the expense of getting the license, then joining a club to
share a plane with several others, and I changed my mind. I guess I
wasn't as interested as the person who goes through all that and gets
his or her pilot's license.

In short, I was not that interested.

My final original point was that that a person who would not study
Morse code in order to get a General license must have an interest akin
to mine towards piloting a plane. That is to say "Thanks but no thanks."

Oh goodness, what a loaded question, and that is very astute of you (you'll understand that comment much more than many here, I suspect <GRIN>). I don't want to seem like I'm hedging, and I'm a damned good debater, but let me preface my "final answer" with the following:

It is extremely disappointing to me to see that this hobby is so populated by people who are so pleased with themselves and under the apparent impression that a ham radio license includes the authority to gnash and hate anyone different from themselves.

I believe that CW testing has promulgated such behavior as above. It is a "governmental approval" for a specific mode, thereby warranting that anyone who has taken and passed this mode test is, somehow, of a higher regard to the FCC and, at least, to fellow hams.

Over time, the CW testing has (by many hams) been a filtering device to keep their ideas of "no gooders" out of the hobby--promoting a "good 'ol boy" concept. This is attitude is horrendous in a "goodwill" hobby, and displays of it are terribly disturbing to me. As amateur radio operators we are

ambassadors of the United States. And, to get so petty as to some of the arguments spoken in this newsgroup, and even more comments I hear on the air, it makes me totally embarrassed to even bring the hobby of ham radio up to anyone any more.

Now, all that given, I respect the tradition of CW. Contrary to such people as Dick Carroll and Larry Roll, who go off half-cocked thinking they "know" who someone is based on their dislike of the mode of CW, most of we who are new to the hobby are quite respectful of the tradition of ham radio, and know good talent on CW when we see it--indeed even love to watch someone doing it.

Yes, I want CW to stay as a testing element and I think 5wpm is sufficient. I also think it should be sending OR receiving (not both), and I think that waivers should only be given upon the agreement of 2 doctors that a certain handicap is, indeed, the complaint of any particular individual. Heck, maybe the Federal Gov't. could even come up with approved doctors--they approve VEs, right? I hear too many stories of hams who have no business being any class of ham where CW was required--because they DON'T know CW.

People such as those mentioned earlier here are reprehensible in their opinion (in *my* opinion <GRIN>), and it is their behavior that does more to harm ham radio than the choices others make NOT to learn CW or who choose not to use CW once they've passed and exam requirement. I am happy to have *anyone* in the hobby--even those with not-so-great-operating practices, as long as they are friendly, promote ham radio as a positive experience, and encourage others to simply JOIN, not to GET TO EXTRA.

While it's true that I have not even listened to amateur radio in quite a
while--probably at least six months anyway--the last time I had a radio on
there was still quite frequent "intonations" around here that express dismay
and a great divide between longer-licensed amateurs and newer-licensed
amateurs. My opinions certainly do not emanate from this newsgroup--I
shudder to think that you'd believe that of me, Bill.

WOW, that is a good question. And, one I don't think I have a good answer for. So, maybe the FCC will just drop it. The only thing I can generally think of, is that they have no more "incentive" to drop it than to just leave it as it is.

Just about any license class can get as involved in their "privilege range"
as any other license class. What additional things are you doing in ham
radio at a higher class license than when you were a NCT? (Other than CW,

of course) And, why were you not doing them as a NCT?

The skill has to be relevant. You should not use some unrelated skill as some sort of barrier to getting a higher license class

Morse code does not necessarily show more interest. Its possible that someone not interested in Morse may have an interest in many more areas therefore having more interest in amateur radio than some that are mostly interested in Morse code.

Putting this artificial barrier may have the effect of blocking out those with more ability or interest in favor of those with less ability or interest. The only thing being that some with less ability or interest learned Morse code, did HF, and not much else. A higher license class should represent more ability (in the skills tested), not less.

Code has nothing to do with the written material. It's a different kind of skill. And it's a single skill independent of other skills. Just as various awards are recognized individually, like Worked All States, one can recognize code skill separately from the written tests.

The written tests are classes of technical ability. By placing code in between, it implies that someone that learned code automatically and instantly also has higher technical ability. We know that's not true. For example, degreed EEs tend to have higher technical ability since they have already studied some of the material. They would still have to review the rf specific areas, and the areas on regulations.

The code should not be in the path way in between the written tests. Basic integrity in Amateur Radio testing requires that.

>
>Was I right?

To put it delicately - it depends.

If he can find his old license, and the dates on it prove he was a pre-1987
Tech, then he only needs to pass Element 2 (Tech written, 35 Q) to get a
General. That old expired license carries credit for 5 wpm code and General
written, as I read Part 97.

If he goes for Extra he only needs Element 2 and Element 4

If he can't find his old license, things get a bit more involved.

Not offhand, but I know they exist. Try a Google search. I will do so and post
the results when I have a chance (this is being written offline and will be
AutoAol'ed to post).

>Oh yes, and if I give the VE the 1986 licence will he know my most currently
>expired one is from 1989? (from some data base or something), giving me only
>Element one.

Doesn't matter. Your 1986 license documentation overrides the 1989 license
documentation. The reason for the difference is that the Tech test changed on
March 21, 1987. The '86 license proves you took the "old" test, and that's all
that matters.

If it were me, I'd bring the original licenses and a copy or two.

254. The curse for HF bands

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-05 21:37:23 UTC
From: Anonymous Sender <anonymous@remailer.metacolo.com>
Message-ID: <b755894c213fde14a1115a3cc9cf2088@remailer.metacolo.com>
Source record: 70040

The fastest countries to abolish Morse
will conquer the HF bands. New hams on HF will need transceivers, antennas,
etc ... so the economy of these countries will grow with new ham shops.
Perharps a new generation of low cost
HF transceivers (CB like) will appear
on the market considering that the mass of customers will be important and that an IC-7800
is not required to make a good QSO.
$300 is a good price to introduce a
25W SSB monoband (40m for example).
Im sure that CB manufacturers will
sell soon low cost ham equipments for
HF bands and not only for 10m like
today, because companies like ICOM has
lost their spirit of simple transceivers
like the IC-202.
Think, an IC-202 like for 40m sold $300.
At least 1.000.000 are sold on the first
week.

Why does it have to be relevant? If the participants in the ARS really
want to impose a swimming requirement, then so what?

> Morse code does not necessarily show more interest.

Refusal to pay the cost shows that you perceive the benefit to be
worth less than that. The cost is some 20 hours learning code. You
feel that joining ARS isn't worth the 20 hours of your time.

Ridiculous. All achievements encourage pride, which in some translates into arrogance. If we beefed up the written tests, and eliminated CW, then the arrogance would remain. It's the nature of the beast.

On the flip side, forcing an up-front investment usually promotes a sense of responsibility. That's why in real estate we usually require hand money along with an offer to buy.

> Over time, the CW testing has (by many hams) been a filtering device

> "good 'ol boy" concept.

Barriers to entry have their uses. All the best organizations have them. Compare CB radio, which has none.

> As amateur radio operators we are ambassadors of the United States.

That's just a piece of rhetoric, used to help justify allocation of spectrum by a post-world-war congress. Hams represent only themselves.

> Yes, I want CW to stay as a testing element and I think 5wpm is
> sufficient.

I'm with you--though I'd just as soon see a five-tier license structure with higher code speeds at the highest levels. Something like, oh, Novice, Technician, General, Advanced and Extra would be great, maybe requiring 20 WPM copying for the Extra. :-)

> I am happy to have *anyone* in the hobby--even those with
> not-so-great-operating practices, as long as they are friendly,

And run into an examiner who doesn't understand all the nuances of
such an answer.....

>From what I have researched, FCC went to multiple-choice questions for all
>ham exams no later than 1961.

IIRC the Novice and Tech/General that I took in 1952 were all
multi-choice. The next written exam that I took was the Advanced in
1968 and by that time multi-choice was in place for a long time in
all FCC license exams with the exception of two pages of diagrams in
the Commercial Radiotelegraph Element 6 which had to be graded by an
engineer, not a regular examiner.

I doubt it--people are arrogant that they can drive a stick-shift. I think anything that takes effort to attain, becomes a point of pride--even if it's only the ability to spit into a cup without missing.

>> Barriers to entry have their uses. All the best organizations have
>> them. Compare CB radio, which has none.
>
> I'd have to see some examples. I was not aware that "filtering" was
> that widely in use.

They're in very wide use. The Army has physical exams and boot camp. These reflect operational needs, but any DI will tell you that there's more to it than that, and that a primary aspect of boot camp is the hazing.

Many organizations use rank in this way; the various scouting organizations, the elks, masons, the Grange, etc.

Many organizations, if not most, have an induction process followed by a loyalty oath; the masons again, most religions, fraternities, the Mafia. In the case of fraternities and the like, the induction process involves hazing and tests of loyalty. In the case of religions, the masons, the grange, etc., the induction process involves revealing secrets, along with tests of loyalty. In the case of Mensa, it involves taking an IQ test. (It should be noted that this tiny requirement doesn't do much: most Mensa members never attend a single meeting.)

Those organizations that demand various sorts of effort from their members tend to receive the most loyalty. (I remember when CB was pretty clean--even though the required license was a formality. My parents let us use it freely, and the only problem we really saw was congestion.)

Well, likely as not, the religious sect (no matter where located) is going to have a problem with my callsign. I daresay the religious group you mention would have a problem even that I am a "woman in a man's hobby." <GRIN> However, in all seriousness, I've been in contact with quite a few outside our boundaries, all having the chuckle in their voice as they returned a call.

I think it says that we Americans are quite lighthearted and enjoy having a good time while in serious endeavors.

Joining another organization for which I wouldn't have the time or
deep inclination to be active in is the reason why I never joined
Mensa or the Masonic Order, both of which I had been "proselytized"
for although they supposedly have rules prohibiting members from doing
that.

>Anyone who says "10-4", and isn't a cop, is a poser[*]. The only

I know a whole bunch of hams who are cops (I do a lot of ARES/RACES
work with them) and everyone seems to be able to keep their jargon
separate.

No, of course interest in Morse code does not in itself show more
interest in the ARS in general.

My thoughts were that if a person is really interested in something,
they will pursue that, even if there are some parts that they are not
concerned with.

I think the MAJOR improvement will be opening to EXCLUSIVE AMATEUR 7.0 to
7.2. That will enhance the band world wide.

I used to operate from Germany (DA2LJ 71-74/76-79) and 40 was a total mess.
This was BEFORE the major digital influx. There just is not enough room on
40 for the rest of the world.

And when the band is good and Europe rolls in...forget it. It is a regular
zoo. In six years the Europeans can spread out.

Neither.

You get credit for elements 1 and 3, but must take element 2 (tech written).

Your first premise is wrong because you must take a test.

Your last premise is wrong because you do not have to take the general written element.

Actually, didn't the FCC say back in 2000 that the ONLY reason they kept a code element in the requirements was the International Treaty requirement, which has now disappeared?

No.

He does have to take element 2, but upon presentation of his pre-87 expired technician license, that element 2 test will give him a GENERAL class license, not technician (as it would for someone who was starting "fresh").

Let them vent, Kim. If it were the other way around, you would feel the
same way. I knew this was coming for a long time, so I've made peace with
it. The truth be told, it's not going to change the way I operate a bit.
As a bit of an aside, the two "Morse" operators at field day were still the
most popular -- we gave the club the most points and had the most on-lookers
(some things will never change) :-))

I went to the FCC ULS site the other day and renewed my license online. Since I have dial-up, it took three hours to download the software and another hour to post the information once I entered it. Sheesh. Well, at least I don't have to do that but once every ten years. :-))

Remember Arnie, we're talking about the same guy who says he'll help fellow amateurs put an antenna up, but not take it down because he isn't learning anything doing that.

He doesn't realize that *he* is his own worst enemy.

Since the gestation period of a Report & Order is one year,
what different does it make when you start?

As you know, government can move mountains, particular ones
they created, but it takes a long time.

Luckily, the "participants" in the ARS do NOT
get to impose any requirements at all. The FCC makes
the rules and, as a government entity, it has NO justification
to make requirements that can not be justified.

Kim,

The problem with the questions and answers is that as they change, unless someone actually learned the theory behind it, one may have to restudy. I let all of my licenses go in the early 80s (commercial telegraph, 1st phone, radar, amateur extra). When I decided to get back into amateur radio, I simply appeared for the exam and spent dang near 3 hours for all of the tests (back in 1993 - I'm up for renewal in a few months). I doubt any of the former licenses carried any weight, but I didn't worry about it and it didn't matter. (the 20 word per minute cw exam did have me a bit nervous as I hadn't copied any cw since 1969 LOL).

> > Only once the new treaty is accepted by the various countries.

There is no global vote of acceptance. It is NOW a country
by country decision. Some countries probably have no formal
ratification at all and simply accept the new treaty as of 7/5/03.

The USA goes through a "ratification" of the treaty which takes
some time...but it will be ratified because to not ratify leaves
the USA totally out of the agreement. If the USA didn't
ratify the new treaty, the old treaty isn't "resurrected", but
rather the USA would simply not be a party to the treaty
at all.

Going back to the "corporate entity" theory; the FCC would spend more dollars revamping the program than to just stay with it the way it is. And, dropping the CW element wouldn't do a thing in terms of minimizing any R&R, would it?

Jim:

That is exactly the question I have been wondering about. There might be considerable pressure -- on servarl bands, but particulalry 40 (extend phone down to 7100 to give 100 Khz "overlap" from Region 2 to the rest of the world).

Hecklers, please note: I did not state a position vis-a-vis CW, the testing thereof, or the Iraqi War.. just wondering if there will be a push here.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

the application form clearly says 'copies accepted'

rsgb have since said they will not accept scans
but as they do not say that in the original offer what they say in
the offer stands

but if wish you could get a uk ham to photocopy the advert
from july radcom - mail it to you or fax it - fill it in - then mail
it back to rsgb with $2

as the offer says it is open to all

take advantage of it - its a great offer not to be missed

> anyway,

The BC stations in 7.0-7.1 have always seemed to me to be much more of
a problem than they are in 7.2-7.3 but maybe that's just a perception
on my part. Beyond that cleaning out 7.0-7.1 will be a huge
improvement for the CW and digital crowd but the phone guys will still
have work to do at upcoming WRCs to obtain the same improvements.

> and it wouldn't surprise me to see the BC units that
> move to just move on up above 7.3, assumingthat as a possibility.

That would certainly make sense, would completely eliminate the
conflict between the hams and the BC industry, everybody would win. I
have no idea how or why the BC stations choose their specific
operating freqs within their bands. Gotta be strategies involved. Any
clues here?

One thing I do know is that significant freq shifts can cost the BC
stations a bunch of money because the equipment and antenna arrays are
purpose-built & tweaked for operating on specific freqs. I understand
that they cannot just grab a big knob and twist it to QSY 150 kHz like
we can. I 'spose this is why it'll take six years to fully implement
their move out of 7.0-7.1.

299. License Renewal Directly with FCC - FREE!

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-06 10:35:04 UTC
From: bob <news@elinkusa.com>
Message-ID: <sXSNa.83531$lo.7513797@newsread2.prod.itd.earthlink.net>
Source record: 70085

It recently came time to think about renewing my license (same call for 46 years) and I started looking to find the proper form. The ham sites on the Internet seem to have several outfits advertising to renew your license for a fee, and I have got a few mailings of similar offers. The ARRL site seems to push VEC use for renewals (at a fee I suppose) but, in all fairness to the ARRL, I didn't spend that much time looking on their site for renewal information. I did find, today, their page at
http://www.arrl.org/arrlvec/#renewals which is somewhat to the point.

The point is, renewals can be done by the licensee quickly and easily, and FREE, directly with the FCC. (See the FCC link in the ARRL link above). I did this less than a week ago (it took only a couple of minutes) and my renewed license arrived today in the mail. I used the ID and password they sent me a couple of years ago, which you will need.

I know a lot of you already know this, but thought I'd pass my experience along to some others. The bottom line is, it's quick and free to do it yourself if you know what
you are doing. If you don't, then pay someone $6 -$10 to do it for you.

Hope this info. helps someone out. -Bob

Yey that ISwhat they are paid to do.

> And, dropping the CW element wouldn't do
> a thing in terms of minimizing any R&R, would it?

Sure it would. It reduces test requirements and
avoids processing the Element 1 has been passed
data from VECs.

More likly than the above, however, will be the movement
of other countries to a nocode structure (e.g. UK, Netherlands,
and others). It appears...although I don't know the legal
detains for those countries, that they may move to nocode
within weeks or only a few months.

Cheers,

Agreed; the government lacks this power. I think you'll find that the
demands of the ARS licensees could constitute "justification", if the
FCC so desired. It is, ultimately, regulating a big club after all.
It's very strange business, really.

Regards,
Len.

You aren't that dense, so of course you're making this straw man on purpose. You define "limited interest in CW" to be "limited interest in ARS" because you define ARS as inherently including CW. Since that's the topic under discussion, you are begging the question.

I believe in keeping the CW requirement, and even adding a few more requirements, precisely to enhance the loyalty of licensees and to discourage those who wouldn't be active anyway, or would engage in bad practice. But I don't beg the original question; I've pointed out that a swimming requirement would do almost as well.

IOW, I believe in weeding out those whose interest in ARS is sufficiently limited that he refuses to take and pass the swimming test--but I wouldn't say, "If you aren't interested in swimming a mile, you aren't interested in ARS."

Likewise with CW.

If the motivation you state was the _only_ motivation, then ARS would have a pro forma license like 1970s CB radio, or maybe none at all.

They have other incentives, too. One is minimizing bad operators who will QRM services in ARS or in other bands. Another may or may not be to discourage participation in ARS and whittle away bandwidth for lucrative reallocation, or at least to keep it small enough that the need for new bandwidth is minimized.

Minimal. As you say, it's just "element 1 has been passed" data. The
VECs shoulder all the hassles, and the testee shoulders the expenses.

The limits of power for government agencies is
found in 5 USC 706 that provides:

"To the extent necessary to decision and when presented,
the reviewing court shall decide all relevant questions of law,
interpret constitutional and statutory provisions, and
determine the meaning or applicability of the terms
of an agency action."

"The reviewing court shall -
(1) compel agency action unlawfully withheld or
unreasonably delayed; and
(2) hold unlawful and set aside agency action,
findings, and conclusions found to be -
(A) arbitrary, capricious, an abuse of discretion, or
otherwise not in accordance with law;
(B) contrary to constitutional right, power,
privilege, or immunity;
(C) in excess of statutory jurisdiction, authority, or
limitations, or short of statutory right;
(D) without observance of procedure required by law;
(E) unsupported by substantial evidence in a case
subject to sections 556 and 557 of this title or
otherwise reviewed on the record of an agency
hearing provided by statute; or
(F) unwarranted by the facts to the extent that the
facts are subject to trial de novo by the reviewing court."

"In making the foregoing determinations, the court shall
review the whole record or those parts of it cited by a party,
and due account shall be taken of the rule of prejudicial error."

The Morse code exams are unnecessary [arbitrary].
5 USC 706(2)(A).

The only thing strange thing about this is how long the
ITU and FCC allowed this nonsense to continue.

I read somewhere that the reasons the FCC dropped the essay-type exams
of the '30's and earlier were (a) The answers were too subject to
interpretation by the examiner and/or the candidate knew the correct
answers but bungled the composition of his answers (b) Multiple choice
answer sheets can be much more quickly graded, almost automatically
with an overlay type checking mask.

> And Morse code wasn't mentioned, at least by me. REQUIREMENTS for the
> license was.

I'm a bit confused by this whole thing, Dick. Even though we are talking about requirents - one of which is indeed the Morse code test - this whole argument is NOT about whether Morse code is good bad indifferent or whether it SHOULD be tested for or not.

It's about it being a tested requirement, and that being the case, a person's interest can be gauged by their willingness to get a license or not, based on their dislike of that test requirement.

If people don't want it to be about Morse code, substitute:

"I won't becoame a ham because I don't want to take a written test."

I won't become a ham, because I don't want to pay the testing fee."

I won't become a ham because I don't think there should be any questions about RF safety."

And I originally brough this up, so I know what I was speaking of.

I'm saying that a person who is willing to meet the requirements for a ham license is more interested in being a ham than a person who is not willing to meet the requirements.

Nothing mentioned about mode, or which particular requirement, nothing. Just meeting the requirements.

But some people seem to know what we're gonna say even before we say it.

There are only a few real arguments against my statement. That would be if a requirement were illegal, immoral, or causing harm to others. And last time I checked, there was nothing in the ARS licensing requirements that did that! 8^)

NO, that's not the topic under discussion. The topic under discussion was the REQUIREMENTS for licensing, whatever they might be. If you had been paying much attention to what's written here over time you'd already know that most of us who've been around a while learned whatever was needed to meet the test requirements, and that just happened to include Morse code. That was the point, made first in this thread by Mike Coslo.

>

Really? And how would a swimming requirement add to the operational capability of a ham radio operator? If you support Morse code testing I assume you already know how Morse code proficiency adds to the communications capability of a ham radio operator.

Ah, you're already the enemy of the code free, and that just cinches it.
"weed them out" will get you no friends and lots of enemies on here.

Since swimming has about as much to do with radiocommunication as
tiddlewinks you're just blowing smoke now. Interest level is interest level,

you can't change it by playing semantics.

Low cost CB like? Do imagine that there may be a few 'other' things to consider in a true multi-band radio? The design has to minimize birdies and images *and* cover 160 meters through 10 meters at a minimum. The radio will have to have a modicum of controls, certainly far more than the average CB rig. Variable bandwidth, probably DSP, two vfos, splits, break in, and more. You mention a $300.00 monoband; consider that you can get 160 through 440 for under $1000.00 or 160 through 10 for around $700.00. That said, such radios have been built in the past; heathkit comes to mind. Nothing wrong with simple, per se, but once you've conquered 'simple', you have to buy a new radio. Then again, as 'anonymous sender', I suspect you might know that and the post is but a troll.

Len, not to be argumentative, but there are numbers of hams who got their license even under more stringent testing requirements than the past few years, who are inactive and, of those still active, have terrible, terrible operating practices.

CW doesn't prove loyalty, staying active, or provide for positive operating practices. It simply means one has passed a CW test, don't you think?

Again, I don't believe in "weeding out" anyone who can and wants to pass the requirements to get a ham license. And passing CW doesn't weed out anything, heck, listen to any of the HF frequencies that we all have heard with the creeps and nitwits on.

The only "area" in which the frequencies may prove out your belief is, literally, on the CW bands, where--simply because of the mode of operation--bad operating practices aren't easily facilitated. I know many hams who claim to be "pure of heart" for the sake of their fellow CW-only friends who, the minute they get on 2M or in an eyeball meeting, rival any bad practices I've heard and have the language of the rest of us when we are speaking verbally! <GRIN>

CW alone doesn't equal good operating, etc. The mode just simply doesn't facilitate anything but a jargon based language that is difficult to spend time swearing, cursing, etc.

And, in what way does a proficiency at a level indicate interest level of an amateur radio operator? What of those who could, at any time, conduct CW at a high speed, but who are no longer active? Doesn't "no longer active" equate to a low interest level in your mind?

Is your part of the debate on the *operational capability* of a ham (in which case you are right--the more modes a ham is skilled at, the better an operational capability he or she has)? Or, is your debate on the *interest level* of a ham (in which case--IMO--you are wrong--because the fact that someone can or will meet testing requirements to enter into something does not equate to interest level at all.

A parallel could be drawn that two applicants for jobs at a company meet the same requirements to get hired. But, one is a much more interested, i.e. loyal, dedicated, employee than another. That happens every day, Dick, and you surely won't deny that. Conversely, two people may study for, take, and pass an exam for whatever of license in ham radio. It is entirely possible that, in a matter of time, *EVEN THOUGH* they both demonstrated the same "level of interest" at the time of testing, one of them could be completely off the air, and have sold their stuff and moved on.

So, what exactly is your debate, Dick, and what is your position on the debate? It's a simple question, not to be answered with, "go back and read..." There is obvious confusion and you've created the confusion. So, would you help clear it up? I'm asking honestly. Can you answer without any of your typical rhetoric?

Me being a CW operator have NO PROBLEM with expanding the SSB segements. In fact if 25, or ever 20kc was left to the CW only crowd at the bottom of the band...That would do just fine.

That means CW only.

Amateur Radio is "defined" by the FCC as a service. For many people, ham radio is a hobby and nothing more. For many others, it is a hobby and a service and they get involved with those areas of ham radio that are a service to others. There is no requirement from the FCC that people must conduct a service in the hobby of amateur radio.

CB is a service also. "Service" is simply a definition; moreover, a justification for the availability of frequencies to us "commoners." It distinguishes commercial use vs. hobby/personal use.

Eliminate CW? I thought it was just the TEST that was going away!

;-)

>> will they expand the phone bands downward a bit?

That depends on who proposes what and how FCC reacts.

From everyhting I've read on the subject, it's clear to me that as soon as the revised treaty is ratified, FCC could just drop Element 1. No NPRM, no NOI, no comments, nothing, zip, nil, nada. FCC could honestly and accurately say that the whole issue had been debated and dealt with back in 1998-99 restructuring and again in the Wormsey-Adsit-Dinelli Petition for Reconsideration.

Changing subband allocations is a different issue entirely. NPRM, comments, etc. is almost certainly a requirement. A proposal to "refarm" the Novice/TechPlus subbands was sent to FCC some time back, and to my knowledge FCC hasn't acted on it yet other than to take comments and reply comments.
>
>I hope not. If they do, I hope the band plans still reserve the CW
>spectrum, and hams obey them.

All of the non-phone HF/MF subbands in the USA are shared between CW and digital modes. It would be a BIG mistake to reduce or eliminate them.

Well said, Arnie. I agree 100%.

>As a bit of an aside, the two "Morse" operators at field day were still the
>most popular -- we gave the club the most points and had the most on-lookers
>(some things will never change) :-))

Conditions this year on FD weren't so hot. I have read many reports of FD
operations where the "Morse" QSOs outnumbered the 'phone QSOs, even though
there were more rigs dedicated to voice. Digital modes were a far, far distant
third.

Over the past few years, the total number of FD "Morse" QSOs has been growing
faster than the voice QSO totals. Wouldn't it be ironic if this was the year
"Morse" became No. 1 on FD?

Morse Code is not (has not) been irrelevent. It has been a legal
prerequisite for operation on HF allocations.

> Morse code does not necessarily show more interest. Its possible that someone
> not interested in Morse may have an interest in many more areas therefore

If they are not interested enough to do what's necessary to get a
license, then they are not interested enough. Taking the time to get
past the 5WPM test, even when it's not one's primary interest,
certainly DOES show one's more interested than one who is not.

> Putting this artificial barrier may have the effect of blocking out those with

Looks like they will be first.

The Radio Society of Great Britian web site report:

"The Mandatory International Morse Requirement is to Cease
The mandatory international Morse requirement for access to
the HF bands is to cease. Colin Thomas, G3PSM, an advisor
to the UK delegation to the ITU World Radiocommunication
Conference, reported on Monday the 30th of June that the
mandatory Morse code requirement for HF access would
disappear at the end of the conference. However, if any
administration feels that it needs to keep the requirement,
it has the right to do so. Here in the UK, the Radiocommunications
Agency has already stated that it will bring in code-free
HF licences as soon as practical to do so. An announcement
will be made on GB2RS and on the RSGB website when
Full and Intermediate Class B amateurs can start using the
HF bands."

The Radiocommunications Agency reports:

"Amateur operation below 30 MHz - requirement for
Morse code test at 5 words per minute"

"Introduction and background"

"At present, radio amateurs wishing to operate in amateur bands
below 30 MHz must pass a test demonstrating their Morse code
abilities. Article 25.5 of the international Radio Regulations
obliges all national administrations (including the Agency) to
conduct such tests for access to these bands."

"The future need for this obligation is on the agenda of this
year's World Radio Conference (WRC-03), being held in
Geneva from 9 June to 4 July. Having consulted the amateur
community, the UK believes that the Morse test requirement
should be removed. We consider it likely that this will be
the majority view at the conference."

"To speed up the process of implementing WRC-03's decisions,
the Agency is now consulting on a proposal to remove the
Morse requirement for access to amateur bands below 30 MHz.

Please note that, if WRC-03 does not remove the requirement for Morse code tests, the Agency cannot proceed with the proposed removal within the UK. We are consulting now only so that the overall process may be accomplished more quickly."

"We propose to merge the A and B licence classes at Full and Intermediate levels, so that the UK licences comprise Foundation, Intermediate and Full. All licensees at each level will have access to all the frequencies forming part of their respective licences. Each licensee will keep his/her current call sign. If a licensee holds both an A and a B licence at the same level (which, if these proposals are accepted, will offer identical privileges), s/he will be asked to choose which call sign to retain by not renewing the other licence when it is next due for renewal. (The discarded licence may or may not be his/her first licence to fall for renewal.)"

Suits me just fine. Today, I passed element 3 by two questions, and missed
element 4 by two questions. Not one minute of study time, yet. Tomorrow
calls for a trip to the library to 621.38 for that extra test book they had...

Saving my pennies for that IC706MKIIG.

-Scott, a dual part operator, 95 & 97. (With the right radio for the band.)

> NO, that's not the topic under discussion. The topic under discussion was
> the REQUIREMENTS for licensing, whatever they might be.

Let's run through this slowly. The question is whether the CW component of the ARS licensure requirement should be kept. (I say yes.)

If the requirement were dropped, then the ARS would have no CW requirement. Participation in the hobby would not involve the mandatory learning of code. The ARS would be a hobby in which some people learned code, and some people didn't. Clear?

Under that circumstance, people who got their "no-code extra" would be participants in the ARS. Some of them wouldn't know Morse Code at all. You would reply that they have "limited interest in the ARS". That would be untrue; they have plenty of interest in the ARS, but no interest in CW.

To equate "no interest in CW" with "limited interest in the ARS" involves defining the ARS as inherently requiring CW--that the ARS without CW isn't really the ARS at all. But whether the ARS should require CW at all is the topic under discussion. You're begging the question.

(It's possible to patch up your argument so that it doesn't beg the question. But saying, "You don't want to learn CW, therefore you aren't interested in the ARS" is pointless and begs the question.)

>> I believe in keeping the CW requirement, and even adding a few more

I didn't say it would. Learn to read. (Note: learning CW doesn't affect the operational capability of someone who never uses it.)

> If you support Morse code testing I assume you already know how
> Morse code proficiency adds to the communications capability of a
> ham radio operator.

Only if used. If not, the operator might as well have learned landline telegraph code. The benefit for the hobby would still accrue, though.

> Ah, you're already the enemy of the code free, and that just cinches
> it. "weed them out" will get you no friends and lots of enemies on
> here.

Barriers to entry are good. Weeding out the diffident is beneficial. If that ticks off the diffident, they can have a latte and a good cry, on the house.

> Since swimming has about as much to do with radiocommunication as
> tiddlewinks you're just blowing smoke now. Interest level is
> interest level, you can't change it by playing semantics.

Interest is demonstrated by making the effort. The nature of the effort is secondary--but if it meets some operational objective, so much the better.

You're right; it's a battle that can never be won. Refusing to fight
it only makes matters worse, unfortunately.

> CW doesn't prove loyalty, staying active, or provide for positive
> operating practices.

We won't know until we have hard data--which we won't have until the
requirement is dropped. Then we can ask: how many people got their
no-code extras? How many are active? How long did they stay active?

The issue is compounded because valid statistics on the current
situation are probably not available, so a comparison can never be
made. All we can do is theorize, which is (as one poster said) nothing
but blowing smoke.

> Again, I don't believe in "weeding out" anyone who can and wants to
> pass the requirements to get a ham license.

Me neither. I believe in "weeding out" those who won't. Exactly where
to place the bar is a danged good question.

> And passing CW doesn't weed out anything, heck, listen to any of the
> HF frequencies that we all have heard with the creeps and nitwits

> operation--bad operating practices aren't easily facilitated.

That's one of the reasons I expect to use CW as my primary mode.

> CW alone doesn't equal good operating, etc.

Never said it did. Raising entry barriers to the right level, on the one hand, and beefing up enforcement, on the other, can sure help.

Regards,
Len.

PS Of course I'm also interested in CW for historical reasons, but that alone probably wouldn't make me advocate it as a licensure requirement.

Morse code skill is relevant to amateur radio operation. Particularly HF/MF amateur radio operation.

>You should not use some unrelated skill as some
>sort of barrier to getting a higher license class

Agreed. Morse code skill, however, is related to amateur radio operation.

Have you ever listened to the HF/MF amateur radio bands, Vipul? Did you listen during Field Day this year?
>
>Morse code does not necessarily show more interest.

That's true. However, being willing to learn enough Morse code to pass a basic test on it shows that the person is willing to make the effort required.

>Its possible that someone
>not interested in Morse may have an interest in many more areas therefore
>having more interest in amateur radio than some that are mostly interested in
>Morse code.

Of course. However, for the time being, there is still a very basic Morse code skill test required for amateur radio licenses that have HF/MF privileges.
>
>Putting this artificial barrier may have the effect of blocking out those
>with more ability or interest in favor of those with less ability or interest.

Maybe.

It may also have the effect of meeting a soon-to-be-removed treaty requirement.

>The
>only thing being that some with less ability or interest learned Morse code,
>did HF, and not much else. A higher license class should represent more
>ability (in the skills tested), not less.

In case you hadn't noticed, all higher-class amateur radio licenses also require more written tests.
>
>Code has nothing to do with the written material. It's a different kind of
>skill. And it's a single skill independent of other skills.

That's why it gets its own test. If it could be tested as part of the written test, it would be.

>ust as various
>awards are recognized individually, like Worked All States, one can recognize
>code skill separately from the written tests.

Which is the way it is done. For now, anyway.

>The written tests are classes of technical ability.

Not really. They are basic tests that combine a wide range of material - rules and regulations, safety, operating practices, basic theory, and some technical knowledge.

Can everyone who has passed the written tests design and build a working amateur radio station?

>By placing code in between,
>it implies that someone that learned code automatically and instantly also
>has higher technical ability.

That's nonsense, Vipul. Pure unadulterated nonsense.

All of the higher class licenses also require additional written testing.

>We know that's not true.

Then why do you spread such lies and nonsense?

>For example, degreed EEs
>tend to have higher technical ability since they have already studied some of
>the material.

So what? Can all EEs design and build a working amateur radio station?

>They would still have to review the rf specific areas, and the
>areas on regulations.

Also safety, rules, operating practices.....
>
>The code should not be in the path way in between the written tests.

The old treaty requires it. The revised treaty doesn't.

>Basic integrity in Amateur Radio testing requires that.
>
No, it doesn't.

Here's a prediction for ya:

Sometime soon, the new treaty will be ratified. Soon after, FCC will drop Element 1 and there will be no more code testing for any class of amateur radio license in the USA.

There will be a brief surge of newcomers and a pile of upgrades, all of which will taper off in a year or two.

But the writtens will not be significantly changed. The technical ability of most hams will not significantly change. We will not see large numbers of EEs and others getting amateur licenses and changing things. We will not see a sudden, new techno-revolution in amateur radio. We will not see significantly more homebrewing, experimenting, or adoption of new technologies.

In short, you will have been proven wrong, Vipul. But you won't admit it.

I searched that message, and nowhere was to be found "Limited interest
in CW"

The closest thing I found was:
Dick> A no-code tech has a limited interest in ham radio or he'd become
Dick> something other than a no-code tech. WITHOUT whining about the
Dick>requirements. And many do just that.

There it is. You'll note that he specifically said "limited interest"
and not referred to CW except in the word "no-code tech". There is a
world of difference between that and your quote.

Ahh, there the problem is! At some point in the dark past, I mentioned that I thought that a person who was interested in the ARS would take whatever tests thrown at them. I noted at the time that this was a separate issue from whether the Morse test should be kept or not.

To me it just seemed logical and a little obvious. We have a person or two here who say they refuse to get a license or advanced license because of the Morse code test. I have a really hard time concluding that they have more of an interest in Amateur radio than those who do take the tests.

note: no one has to become a ham, no one has to become a General or Extra.

Well, we kind of already have some pretty good barometers. Those HF hams
with the crappy operating practices that any one of us can listen to, right?
I'm not sure the current potential for the demise of CW as a testing element
will affect, one way or the other, the potential for good or bad operating
practices.

You know what I have found? Nitwits that get on the air are often off the air pretty darned quick. I've found through listening and actively participating that a crappy operator is soon ignored by many and they get fed up and go away. The problem is the flow never ebbs with all the people getting into ham radio at any given point. There will *always* be crappy new operators and crappy old operators.

Yup. Imagine the following answer sets to the question:

What is the length of a half-wave dipole cut for 7.1 MHz?

Answer set #1:

A) 25 feet
B) 40 feet
C) 66 feet
D) 90 feet

Answer set #2:

A) 65 feet
B) 67 feet
C) 66 feet
D) 68 feet

Also (c) Anyone who has half a brain can proctor and mark the test - no special
radio knowledge needed.

Speaking of overlay type checking masks, I recall when I first saw the answer
sheets and used the prescribed #2 pencils. I thought FCC had some sort of
computer marking system, and wondered whether it used optical methods (shining
a light through the paper, to be read by photocells) or electrical contacts
sensing the graphite from the pencil on the answer sheet. Imagine my
disappointment when the secretary at the FCC office merely put a punched paper
mask over the answer sheet.

It gets even funnier when you consider what has happened in Japan, which has long had a nocodetest QRP HF amateur license. Since 1995 the number of JA amateur stations has been dropping, along with JARL membership. JARL is now smaller than ARRL. If the trend of the past 8 years continues, soon there will be fewer Japanese amateur stations than there are US hams.

All this even though Japan is the home of Yeasu, Kenwood and Icom. Go figure.

What does "CB like" mean?

Currently, there is a wide selection of amateur HF/MF transceivers available new for less than $1000. Lots of good used equipment as well for even less money. Plus kits. As we head into a declining sunspot cycle, the need for multiband capability increases.
>
A prediction: We won't see significant changes in the equipment offered for sale to radio amateurs because of changes in code test requirements.

I don't know, Mike. In theory you may be right. But, in practicality, it
is my belief that someone can have an extreme interest in ham radio and
never get a license. For instance:

An FCC employee may take up some cause for amateur radio just because they
are extremely interested in see the service/hobby have whatever "cause" it
is they've decided to take up. (Good grief, follow that one, will ya? LOL)

A parent make have more interest in ham radio than many amateurs (proven by being very involved in legislative matters concerning ham radio) because their kid is involved.

And so it goes. I don't think anyone is more passionate about emergency service than I used to be, but I was never involved on the operational side--only on the training/process/advocacy side.

You see what I mean?

No-code means a technician without the Morse code test. I was one once.

And I still don't see that quote.....

Missed that. If so, I concede we have a misunderstanding! And, indeed,
that we agree. (My illustration using a swimming test is of course a
more extreme version of exactly what you say above.)

Mike's position is roughly equivalent to an Austrian economist's: you can say you have an "extreme interest" in owning a Jaguar, but the people who pony up the $60K are _proving_ their "extreme interest". As Mises would say, people's words do not demonstrate their values--their actions do.

> And so it goes. I don't think anyone is more passionate about

True, but that's a boundary case. Mike's position is unchanged if he replaces "interest in ARS" with "interest in participating in ARS" everywhere.

Heh. CW users don't usually converse anyway--they usually exchange RST reports. The payoff for me will be soldering a kit with my son, and then hearing him holler, "Mommy, Abba and I just talked to Korea!"

That _is_ interesting! Acourse, one wonders how their 10-year-long
recession has impacted these statistics, for example. I'd tend to see
it as proving that lowering the bar actually reduces interest.

Well I'll admit for any possibility. It's a big strange world. I think
your situation kind of works for what I was saying though. For what you
were interested in, the technician's license was adequate.

Remember, I'm not saying that lack of interest is a bad thing.

What I am saying is that professed interest followed by not pursuing
that interest because of some "unfairness" (like CW testing) or somesuch
is pretty odd.

Phew! Actually I am glad you gave me that google link, because I went back and re-read the posts to figure out where this whole thing went astray. Seems it happened soon after I made my first post.

Seems that some of the more vociferous PCTA'ers agreed with me, and then the other side felt compelled to check in. From there, the simple statement got kind of stratified.

Oh well, time for a few Ibuprofen....

I understand. But, (as a woman I have to try and get the last word in here)
wouldn't you say that my studying for and taking the CW test made me as
interested a Tech+ as any other? By your way of thinking that is what I
surmise. BUT, I don't think it would be true...I wasn't the slightest bit
interested in CW or dedication to ham radio, et al. I *thought* I was going
to be interested in HF. An interest in what ham radio had to offer came
later, as I realized and learned what kind of fun was also to be had in the
hobby! Still, it was all on FM. I had just left the CB world and wasn't
"interested" in hearing the static of HF.

The above is entered very quickly without a lot of thought. I have been
building a program all this week so have just been "hanging out" here again.
I'm tired and beat by now...LOL

Hansl:

The only "barrier" to Technicians using 5 MHz Amateur frequencies would be the requirement for those operating on the HF bands (10-meter Novice/Tech segment notwithstanding) to possess at least a General-class license. Since the ITU has eliminated the International Treaty requirement for code testing, and the FCC is sure to follow once the petitions start rolling in tomorrow morning, present Techs will soon be upgrading to General and Extra in large numbers -- thus providing more HF phone operators to go QRT once the band conditions no longer support that mode!

>digital modes, are you now saying all of those modes are illegal?

Ryan:

I didn't say that at all, and you, yourself, stumbled on the truth: Amateur
Radio digital modes are "encoded," not "encrypted." Encryption implies that
a system is being utilized to obscure the meaning of the message to all
who do not possess the requisite decryption equipment and "key" to the
encryption method utilized. The "encoding" methods utilized in Amateur
Radio are public domain, and the equipment used to decode these signals
simply MUST provide positive and accurate decoding in order to work --
or else, nobody would spend good money to purchase them! "Encrypted"
signals have no use in the ARS -- and the FCC rules which prohibited
encrypted signals is quite correct considering the nature of our service.

>When was the last time you listened to a packet signal being transmitted and
>could tell what was being sent as far as the content of the message, merely
>by listening by ear? If you are that good, you have my respect, as it
>merely sounds like a digital "blurb" to me.

Never, of course. However, while operating RTTY, I can recognize my own
call sign being sent in Baudot code!

>Now do you understand what I meant by "encrypted?" The average "public" in
>"scannerland" does not have the capability to monitor that traffic as we do.

I was never confused over the meaning of the term "encrypted." Moreover,
the average public scanner owner can, indeed, decode packet signals for
the price of a TNC. This does not imply that packet signals are "encrypted"
in any way. If you thought otherwise, perhaps it is you who is/was confused!

The ITU no longer requires Morse testing, and has left it to each
Administration to decide for themselves if they wish to require the
test.

Thus it is now up to someone to petition FCC to remove the requirement
from US regulations.

Let the games begin (again).

With all kind wishes,

Four times a year, the ITU International Frequency Registration Board (or whatever it's called nowadays) holds a conference for SW broadcast frequency assignment. Most of it is by paper submission and is routine "we've been on this frequency for 70 years....." stuff.

For new requests, the requesting Administration will have submitted info on the location of the transmitter, directionality and power, hours of service, and the target area. A computerized frequency coordination study is made by the IFRB to determine what frequency in the band in question would cause no harmful interference to existing (earlier priority date) stations. Quite often the coordination will be for less or different hours or power than requested to avoid any harmful interference to or from the applicant. This coordination will be "ratified" at the quarterly conference and a priority date assigned.

>One thing I do know is that significant freq shifts can cost the BC

Or so they say. A 150 kHz shift is no big deal as long as the broadcaster is willing to take the transmitter down for a period of time (weeks? months?) to find the proper coil and capacitor settings (synthesizers are a no-brainer nowadays). A good friend of mine was a tech at a SWBC station years ago and could do a band change with pre-set taps in less than two minutes (of course the walk-in 50 KW GE monster was shut off during that time).

The long lead time comes in not where the broadcaster has to order and install parallel equipment currently (from scratch it should take no more than 2 years at the very outside) but where the broadcaster wants to amortize the equipment, i.e. when they are ready to order a new transmitter they will order it for the new frequency.

Even though I agree with the testing being unnecessary, that's a pretty conclusory statement.

706(2)(A) deals with what happens with "arbitrary and capricious" decisions but does not define WHAT "arbitrary and capricious" decisions are. That definition comes from case law - see the many opinions of J. Skelley Wright and David G. Bazelon of the US Court of Appeals for the DC Circuit in the 1970s when these matters were defined and refined as applied to regulatoiry agencies. Those two judges were giants in the field of regulatory law, informally referred to as the Eighth and Ninth Commissioners for the way they massaged, mangled, and murdered those FCC decisions which they felt were "arbitrary and capricious".

Again - I've defined this for you before, Larry - an agency decision is "arbitrary and capricious" when there is no required notice and record, and when the decision does not make reference to the record and how it coincides or differs. In that regard, the requirement for code ability in years past could not be considered "arbitrary".

Read some of the pre-1960 decisions and some of the recent decisions to see what I am referring to as to style.
>
>The only thing strange thing about this is how long the

As long as SOLAS designated CW Morse as a means of communication in worldwide safety and disaster systems, that was articulated justification for requiring amateur operators to be able to recognize and copy Morse code.

It's a moot point now anyhow.

Still doesn't answer my question about whether the RA can do it
based solely on a report from the Delegation on what has been passed
or whether there is a formal ratification process either on the
Ministerial (agency) level or in Parliament as there is in the
Former Colonies.

The use of the term "service" in communications regulatory law does
not mean "service to the public" or "service to a master" or any
other common use of the word. It is, as you pointed out, a
categorization.

It has nothing to do with "availability of frequencies to us
commoners" or "distinguishes commercial use vs. hobby/personal use".
Other radio services regulated by the FCC are the Maritime Radio
Services, Broadcast Radio Services, Public Safety Radio Services,
Commercial Wireless Telecomm Services, etc. They hardly fit your
definition above.

The term is used in international communications law so it's natural
to be used in domestic communications law. If it makes you happier,
replace the term "Service" with the term "Licensing Group" and you
will be 100% accurate.

That's an anecdotal statement. Perhaps that's the average, but
there is nothing that requires any particular minimum or maximum
time.

If there is enough "oomph" behind it, an R&O can be issued in one
day if it's a type that does not require public input. That would
have to be a Memorandum Opinion and Order drafted in a quick hurry,
of course, but if it's issued under delgated authority it just needs
one signature, and even if it's a full Commission MO&O it can be
bicycled through the five offices in less than an hour if everything
is lined up. I've seen them do that with various administrative
matters.

>As you know, government can move mountains, particular ones
>they created, but it takes a long time.

Except when they want it to be a short time.

OK. I could have worded it better. What I meant was the international
requirement to have code tests is gone. Actually, though, in several EU
countries the test will go within the next few weeks. The FCC will take a
little longer, though.

The UK are dropping the code test on the 20th. It was going to be August
1st, but they brought it forward to come before a big outdoor event that
the RSGB are holding on the 26th/27th of this month. Presumably, this is
to help the RSGB recruit more people into the hobby.

They have to have a consultation period, but the RA 'cheated' by
publishing the consultation document before the WRC!

I'm not sure. I think both Holland and Belgium plan to drop code testing
this month. The UK is doing it on the 20th, but they may not be the first.

Well, Dee, CW isn't used by me, although I have never actually worked anyone through a satellite either. I question whether as many as 50% really use CW to any great extent. It's always the same few people in any club who come out to work CW at field day, and they have never been close to 50% in any ham club I've belonged to.

There's always an excuse, Steve.

Here are some predictions for ya:

The dropping of the code test will not be accompanied by a significant change in the written exams.

The dropping of the code test will not be accompanied by a significant, sustained increase in growth rate of the ARS. There may be a short term surge, and lots of upgrades, but total numbers will not skyrocket.

The dropping of the code test will not be accompanied by a significant change in the modes and technologies used by hams. There will not be a technorevolution, nor big increases in experimentation or homebrewing. Just more of the same of what has been going on.

Let's see what happens in the UK. RSGB and RA have been pushing to drop the code test for a long time. Maybe they won't be disappointed.

> Just wondering.

Don't hold yer breath. The usual bureaucratic delay will slow things down here in the USA. And remember, those who get the licenses after the change will be raw, inexperienced newcomers, who will need our help and guidance as they are welcomed into the ARS.

It ain't pretty.

Note that Japanese *operator* licenses are free and do no expire, so the number of Japanese operator licenses is an indicator of how many people have been licensed in Japan since the end of post-WW2 military rule (1952?). not how many are licensed today.

Japanese *station* licenses must be renewed and cost 120 yen, as I recall. They are more of an indication of how many active hams exist in Japan. However, note that an operator can be active without having a station license, by using a club station of friend's station.

>I'd tend to see
>it as proving that lowering the bar actually reduces interest.
>
That's one factor. Another is that saturation was reached. Or that amateur radio was a fad for a while in Japan and now the fad is over.

There is also the effect of inexpensive cell phones and 'net access. I have read that many Japanese got ham licenses and HTs for personal communication, which have since been replaced by cell phones.

Hopefully, that's accompanied by increases in features and quality! If the same item was increasing in price over time, I'd be annoyed.

> In fact, if demand increases, we may see prices rise rather than

Until it got so high that it attracted Wal*Mart into the market! But I don't believe demand will rise high enough to attract more players.

Speaking of which, cruise on over to rra.antenna, and catch an old member of this group in what may turn out to be the mother of all threads - "Is Cecil's Math a Blunder?" and it's evil offspring "Conservation of Energy". Here are some guys who just won't give up. Unending threads like this eventually become art. Just like the one lunchtime in high school when I put all my money into the jukebox in the cafeteria and played "On the Cover of the Rolling Stone" lessee, um.... 30 times. 3 dollars at a dime per play.

Each new time it played was a different reaction, from groaning to laughter to discussions of unplugging the jukebox to us leaving the cafeteria, the next group going in, not knowing that they were going to be serenaded for their lunch too.

It was finally unplugged after the last lunch shift, and I wasn't around to demand my money back for the unplayed songs.

In the short term, that's what I personally expect we will see. In the
long term, however, I think we will eventually have only two license
classes instead of the current three (one for VHF/UHF only privileges,
and one for full HF privileges in addition to that).

1. FCC remains under a congressional mandate to simplify regulations.
The easiest system for FCC to administer would be exactly what I have
outlined - either you have HF privileges or you don't.

2. Reading between the lines on the FCC's R&O WRT the last
restructuring of amateur license classes leads me to believe that the
commission would have preferred to do this in the first place but its
hands were tied by the international requirement that WRC just
removed. Absent that requirement now, FCC will be free to do what I
think it would have preferred to do four years ago.

It has long been my opinion that the single biggest quality that distinguishes most hams from most operators in the personal radio services such as CB, MURS, Marine VHF, GMRS, and so forth is that we hams are not only interested in our own enjoyment of radio, but we also have a genuine interest in others enjoying their use of their privileges as well. There are of course exceptions on both sides of the dividing line that one might consider the licensing process to represent, but in general, most hams really want "the other guy" to have an enjoyable experience when he (or she) goes on the air. We care not only about ourselves, but about others as well.

As for those that do not, well, we've all seen troll messages posted in this and other NG by such persons many times in the past. If such folks continue to shun the ARS in the future, this is probably a good thing for all parties concerned. Pirates - whether they are on the so-called "freeband" or are simply bootleggers on the ham frequencies or elsewhere, have that status by their own choice. I seriously doubt that we will see a major influx of new hams from the ranks of people who feel they are above such conventions as getting a license, operating according to a set of regulations, and conducting themselves in accordance with good amateur practice and gentlemen's agreements and so forth.

Nevertheless, there most definitely are many operators in the other radio services who do in fact possess this quality, and it is my hope that we'll see them streaming into the VE sessions en masse once the changes take effect. In fact, I'll be working to convince them to do just that, and to get them into the club meetings and to help them learn what they'll need to learn to fully enjoy their new privileges, and I'll be encouraging others to do the same. As with other opportunities given to us by such simplifications of the regulations, it's up to us to either make the most of it or let the chance to do some good on behalf of the ARS just slide on by...and I do believe that those who are not part of the solution are part of the problem.

In the short term, probably not. In the long term, as the written
tests go through their normal revision and updating processes, I'd
expect and hope that the question pool committee members would begin
to include questions on practical operating knowledge in addition to
the questions on theory that are already part of the tests. I've long
felt that it was time for the CW testing requirement to go, but the
fact remains that it has indeed been the only practical skill (as
opposed to theoretical knowledge) tested, and I think that this does
need to change.

>The dropping of the code test will not be accompanied by a significant,
>sustained increase in growth rate of the ARS. There may be a short term surge,
>and lots of upgrades, but total numbers will not skyrocket.

Seems to me that the outcome, in this regard, is up to us. We have an
opportunity to start a significant influx of good operators into the
ARS provided we're willing to identify them and elmer them and welcome
them into the ranks, so to speak.

Those of us who go out of our way to meet these people and convince
them to get into the club meetings and the VE sessions, and who answer
questions and provide the guidance the newcomers will need and then
accept and respect them as fellow hams should, will be taking good
advantage of the opportunity.

Those of us who spend our time coming up with witty and derogatory
names like Extra Lite and insist on distinguishing between No-Code and
Know-Code and go out of their way to make people feel like
second-class citizens will be letting the opportunity just slide on by
and will be doing a disservice to the ARS.

>The dropping of the code test will not be accompanied by a significant change
>in the modes and technologies used by hams. There will not be a
>technorevolution, nor big increases in experimentation or homebrewing. Just
>more of the same of what has been going on.

Again, this depends on us.

Hmmm...lemme see...we're faced with the possibility of having a lot of newcomers with little or no practical experience WRT radio wave propagation on the HF bands, and thus little knowledge on which to base selection of a frequency band on which to begin making contacts at any particular time. Isn't this exactly what ALE is supposed to do? Yet, how many hams do you know of who have even heard of ALE, outisde of those in this forum where I know the subject has come up previously? How many hams in your local club know what ALE is? How many would be willing to accept and use it if they did?

To use the British term: Bloody Well Right! Especially since there will undoubtedly be those who will not welcome them at all, and in fact do quite the opposite. Those of us who wish to take advantage of this opportunity will have to work doubly hard in order to overcome the harm done by the minority that will attempt to ostracize and chase away the newcomers, forgetting that they were newcomers themselves once upon a time.

I feel compelled to point out that such negativity is not likely to
have a positive effect on "whatever's left of the ARS" and to remind
once again that anyone who is not a part of the solution is a part of
the problem.

>So, we'll change the debate over
>to whether or not the ARS is a "technical" service and whether the testing
>should be changed into something more dumbed-down than it already is.

Every time I hear someone lamenting the supposed dumbing down of the
ARS, I can't help but think of the number of longtime hams I've seen
over the past few years who brought a brand new 2m or dual-band mobile
or HT, or an Icom 706MKIIG or Yaesu FT-100 into a club meeting to seek
help in programming it. I'm not talking about relative newcomers
either, I'm talking about guys who were hams before I was even born.
Furthermore, sometimes it's a no-code Tech who picks up the
old-timer's HT and shows him how to program it. Never mind that the
HT's owner could have learned this for himself by reading the manual,
because many manufactuers' manuals leave a lot to be desired, and
we're talking about guys who once built microphones out of tuna fish
cans and can do 40WPM or better in their sleep. How are we supposed to
be dumbed down if guys who have been extras since Moby Dick was a
minnow need help from another ham to get a new piece of equipment
operating? And how are we supposed to be dumbed down when it turns out
to be a guy with a license the ink isn't even dry on yet that is able
to provide that assistance, and is happy to do so? I'm not buying the
dumbed-down theory one bit.

>After that, the next bone of contention will be whether or not a prospective
>ham should be required to know how to spell his name correctly on the
>application!

If he can't, he gets a license that doesn't have his name on it and is
therefore invalid, doesn't he?

BTW, Larry, you were supposed to look me up when you came up this way,
I still owe you a roast beef from a bet we made several years ago and
you haven't even bothered to collect your winnings.

You can, if you want to, stick several hundred bucks into a CB rig.
You can also get one for about forty bucks. The latter type will be
single mode (AM only) with zero bells and whistles. The former will be
AM/USB/LSB and include such extras as some form of RIT, dual power
supply (AC/DC), an actual S-meter rather than a bunch of LEDs as a
signal strength indicator (if any at all), some basic DSP functions,
and reception of NOAA weather channels. The top-of-the-line CB base
stations cost far more than a 2m FM rig as it is.

>40m dipole?

Sounds to me like you just desribed the Ten-Tec Scout with its modules
for different bands, except that the price tag does not rival that of
a CB rig. Frankly, I don't think we'll see $40 ham HF rigs, ever. Take
one of those $40 CB rigs and modify it for use in the AM portion of
10m and see how it performs, and you'll quickly understand why. You
get what you pay for.

I can, however, see a $200-$300 single-band HF rig (on other than 10m)
with limited mode selection and few if any bells and whistles. I
exclude 10m from that statement because those have already been
offered in the past - see Radio Shack HTX-10 for example.

License renewal is FREE, any amateur can renew FREE directly with
the FCC, you don't need to go through the ARRL, W5YI, or anyone
else. Why pay someone else (either directly or through ARRL dues)
for something that is very simple and one can do themselves for FREE?

CBs are cheap not only due to mass production, but because they are single conversion with ceramic filters (a design choice) and because they are single band and low power (FCC requirements). There may be an increased market for an entry-level HF rig that will only cost about as much as a 2m FM rig, because more will now choose to start out on HF.

But what could be included? Probably SSB/CW only, maybe just a couple of bands (which ones?), probably 10-20 watts out (PA transistors are significant part of the component cost of a rig). Probably only ceramic filters, but maybe with a high first IF a la Alinco (they might be one of the firms interested in this market). Maybe 80/20m to use the image response to make it easier to build, or 40/15m, so the user can just use a 40m dipole?

In my sporadic dealings with them in the mid-1960s I was always
impressed by how the GPO (predecessor to the RA) could cut corners
where the FCC couldn't - or wouldn't .....

Remember that the "CW band" concept only exists in the U.S. In the
rest of the world the 40m phone band starts at 7.0mHz. Here in
Israel, all of Europe and Africa, the whole band is only 7.0-7.1 mHz.

Getting the broadcast band out of there 7.0-7.2 will also open that
extra 100kHz to us too. It would be nice to be able to use 40m for
SSB to the U.S., something I can't do now.

Since the novices are just about gone, IMHO the U.S. should drop the
7.1-7.15 mHz CW band. Actually what I would like to see is a worldwide
7.0-7.2 mHz 40m band, with the following "band plan"

7.000-7.050 CW
7.050-7.100 Digital
7.100-7.200 SSB voice, no SSTV, packet, etc.

Agreed. I'd like to hear just what sort of technorevolution some people
were expecting.

Do people who do not have the time to take the morse code test have the
time to invent new modes? Do they have time to invent digital voice
modes that take up bandwidth than ssb?

And there you have one of the more interesting dilemmas to the ARS.

Is a brand new Extra, who has never been on HF, even accept Elmering?
Or will they insist that the conventions that have been developed over
the years are not applicable to them.

This is not as far-fetched as it may seem. I tried to help out a new
Extra in a contest once. I knew he did not have any HF experience at
all, yet he wanted a bare minimum of help. After showing him where the
PTT was, and how to change bands, I started to explain the structure of
a contest QSO. He interrupted me after the first sentence with a "not to
be rude, but I'll take over now". I came back the next morning and saw
the results of his work. Six QSO's! He was woring at the rate of 1 QSO
per hour under *good* band conditions!

Even in my own experience, I know that I had my extra before I should
have. I went from General to Extra in a little over 6 months.

I would propose that there be at least a year wait before upgrading to
Extra. Ya just can't gain enough operating knowledge in less time.

Well, I am a no-code tech and am actually not looking forward to the end of the CW requirement. I am studying code now and will continue to do so. I take my upgrade test in Sept. and can't wait to get my code ticket.

Same story here (don't have a tech, though). Now I'm racing the clock
to take the test while it exists; it would be a bummer if they rammed
the elimination of the code test through before I was ready. :-)

Regards,
Len.

Mike> the results of his work. Six QSO's! He was woring at the rate of
Mike> 1 QSO per hour under *good* band conditions!

This is the opposite of my first HF contest experience -- just over a
year ago at Field Day. The group I was with was very gentle to new
contesters, to the point that they had written down precisely what we
were to say, what we needed to ask for, even to the point of reminding
us to wish other stations "good luck". This year's Field Day was the
first year that I ran a contest station unattended, and I was able to
provide some assistance to Technicians who wanted to work HF. It was
a good feeling, and I look forward to learning more if only to share
that knowledge with others.

Mike> Even in my own experience, I know that I had my extra before I
Mike> should have. I went from General to Extra in a little over 6

I went from Technician to Extra. I had my Technician ticket for two
years, and had only actually operated for six months before
upgrading.

Mike> I would propose that there be at least a year wait before
Mike> upgrading to Extra. Ya just can't gain enough operating

Mike> knowledge in less time.

It's a good suggestion, but not something I'd like to see in FCC
regulations. Mileage may vary.

Jack.

Always some idiots.... When I got my "extra lite" on restructuring
day, went home to fire up the
Kenwood HF rig I bought used (strung an antenna that vaguely resembled a
dipole before) and
listened around a bit to get a feel on how QSOs are done on HF. That
and some experience
on ten between 28.3 and 28.5 I started keying up the mic mostly to
respond to CQs. After some
newbie type errors I think I have the hang of it now..... With the
combination of a boring common
prefix callsign, low power (~50 watts) and a crummy antenna, you develop
some skill.

The key is to realize that when entering into a new environment, one may
not have all the
facts right, and be willing to adjust accordingly.

Fortunately, everyone who Elmered me on HF ops was very kind.

If I were to make a guess on that guy's thoughts, he was probably
embarrassed at his inexperience. Not wanting to appear foolish, he just
acted brusque, and ended up looking foolish anyhoo.

Ok,,so you didn't realize you were had,,,you do now. Tell me something
Eric, what is your position on hammies that reduce themselves to forging
cbers? How about those hammies who receieve a warped but admitted
pleasure in failed attempts at "messing" with people?

>I simply posted a response to that group as it
>didn't seem relivant to anywhere else

Ahh,,,but your initial response WAS relevant

>(whats the matter,

:),,,nothing like a snip when it illustrates something you wish to
ignore..but to answer your question,,,, Nothing at all,,,I merely wish
your input on such behavior of hammies since you removed yourself from
the topic,

>thinking too much for you or

>have you lost your common sense?)

Hmmm,,I see, not only are you another hammie who doesn't practice the
hammie creed, you rush to join the lids of this forum and make your
posts of a personal nature and that of the poster instead of the message
or content (sigh),,well, ok,,since you insist....,,one can always
acquire "common sense".....,,,but at your age, still spelling the
way you do speaks volumes about which one of us may possess such sense
you speak of.
_
This is not a USA-only forum,,the FCC has no jurisdiction over the rest
of the world. Arrogance that some Americans possess is illustrated by
yourself by the feeling that the entire world

revolves around them and their "rules."

>pardon me, but would you care to explain why
>more than 90% of the posters in here are
>generally from the US?

I could, (income per capita, average American wage, access to bigger, better, cheaper,and more powerful computers and networks,, american popularity of cb etc., etc.) but you probably would have a problem with it, strain yourself in the process, and it means nothing in the context of usenet. Failed attempts at obfuscation concerning usage doesn't change the fact that the forum is worldwide and not exclusive to the US.

>this may be an "international discussion
>forum", but it doesn't have international listed
>in its name, nor in the usenet motd for this
>group.

LOL,,,Gee,,,it also doesn't say "Freeband is not part of cb".......how absurd, Eric. One can see that you really wish to apply your non-logic across the board, but you are unable to pigeonhole. Once again this forum is not limited to the US, despite the mythical figures you pulled from your ass and tossed about as fact. In addition, Frankiestein, (in what is becoming a familar scenario) had an imbecile-like moment which he claimed integrity in a cb forum is equated with identification. It doesn't claim anything of the sort in the name of the group, does it, Eric? Absurd.

>besides, you sound just as arrogant as the
>rest of us

How drool. Please enlighten the world with your reference to the word "us"? Who else would you consider so pious that they readily admit to sharing the arrogance on display by yourself?

>and I suspect you are probably a
>US citizen in any case).

And this is of concern to yourself why?
who said it was a concern to me?

It certainly was concern enough for you to become bothered enough to try and justify such boorish behavior. Twas you that chose the word "suspect", yet you claim no concern? Hokayyyyy!

_
No, it doesn't apply to any frequency down to 12 meter. Many of those frequencies are abandoned and not in use.
Again, your claim holds only slight merit when referring to the US,,this forum is worldwide and so is cb. These "commercial" interests you speak of, IF they are to be found and IF they were to be interfered with, have no recourse against any ops outside the US and there exist plenty of those...

>say that again?

Now I know why so many challenged hammies that suffer communication deficits visit rec.radio.cb, Eric..to learn what you haven't..

>I know for a fact that those channels below
>26965 are still in use in many areas of the
>country. wlwg 700 cincinnatti still uses FM
>remote pickups down there in the 26.210
>regime (I pick them up fairly often on the
>shortwave and have to slope detect them
>because they are narrowband FM).
>abandoned?

Yea,,there are several remote pickups for broadcast stations. Do you even know what a remote broadcast is for Eric,,what it entails,,why it exists at such frequencies? I also know for a "fact" that very few of these frequencies are still in use. I didn't say they were ALL abandoned, I said the majority are absent of use, void of action,,,in other words,,most are abandoned. Technology has rendered most of these freqs useless for businesses..you can always find an exception to cite, Eric, but the fact remains, the majority are abandoned and not in use by their authorized users.

>that isn't what the fcc frequency database
>has to say.

I'd advise against becoming a "sheople" but apparently I may be too late...if the FCC or federal government claims it, then it must be true, Nevermind ascertaining, thinking for yourself.......believe what you are told and everything you read, especially from the government.

>they are still allocated and still protected,
>even if they are not in wide use.

Now we have you hedging, doing the GillinadFrankiestein-flop,,you are practically reversing your earlier position and claim of these freqs being used, to agreeing with myself that they may not be in wide use, but are still protected. You are coming along but still have some learning to do concerning this issue, grasshoppah. They are not protected. There is none monitoring these frequencies to offer this "protection" you speak of. Any "protection" amounts to a response (usually a letter of inquiry or warning) via a complaint to the FCC. A sneak peak at all the hammies getting popped (who were turned in by other hammies via COMPLAINTS) illustrates how these scenarios are dealt with.... I wouldn't refer to such action as protection, but you may.

–
>the rules are clear,

And there we have what is causing you such straining, in all it's refelcted glory,,,,having a cat over the rules which you have no control over,,you may wish to ring up a friendship with Dave (the Hypocrite) Hall...he shares your pain, only he brings with him years of illegal cb and high power operation....do you bring the same virtues to bestow upon

us lowly cbers, Eric?

>unless you have a license
>to operate in the section from 27.405 - 28.000
>(which I KNOW for a fact no one here does),
>you open yourself up to litigation from the
>FCC,

Or lipservice from those not unlike yourself that have power issues and issues of incompetence and the need for control over something in their mundane lives, no matter how trivial..

> any commercial concern that may have
>operating privileges there or even the military
>(which does have some allocated spectrum
>there) this applies also for any frequency
>below 26.965 clear down to 12 meters (mostly
>commercial and marine band HF stuff).

>you don't have the letter from the FCC saying
>you can operate there, its the same as not
>having a license to drive a car on any street in
>america (radio operations are a privilege, not
>a right and onyone spouting otherwise really
>doesn't know what they are talking about).

No, it's not the same at all,,you are comparing apples and tomatoes,,one has the possibility and probability to maim, injure and even kill when operated in a reckless and dangerous manner,,,,,,,,spouting otherwise when one really doesn't know what they are talking of is a two way street, Mr. Oyen.

>excuse me, what to vegetables/fruits have to
>really do with the application of rules and
>regulations with regard to operation of a
>station IN THE US?

Twas a figure of speech,,,,you are attempting to compare two presentations that have nothing to do with each other. Often, when one makes such embarrassing gaffes, the phrase "apples and oranges" are used to denote the absurdness of the claim,,I took the liberty of plagiarizing one of our forum-frequent visitors (wasn't it yourself?) have saying of "apples and tomatoes". Kapish?
Now, once again, claiming one doesn't know what they are talking about, Mr. Eric Oyen,when it was yourself attempting to compare a rather benign act (freebanding) with the act of driving an automobile in a reckless manner, which has a great possibility and probability to kill or maim, begs the repeating of: spouting otherwise when one really doesn't know what they are talking of is a two way street, Mr. Oyen.

>if you didn't get my meaning that time, then
>you need to reread the originating statement
>that lead me to ask why a comparison of

>apples and tomatoes was relivant (let alone
>apples and oranges which are both fruits).

In the first place, your "meaning" was nothing but a failed attempted snip of something you wished not to acknowledge,,the illustration of your poor comparison of a rather benign act (freebanding) to one that has the probabilty to kill and maim when operated in a reckless manner (an auto). Claiming one who fails to share the exact myopic view and manner you profess does not equate that one "doesn't know what they are talking about."
In the second place, I wasn't the one asking another to repeat themself (as is often indicative of a communication deficit),,you were, Mr. Oyen.

>this point is moot anyway.

Agreed,,stop harping on semantics and do try to acknowledge that freebanding is nothing like "operating a car in a reckless manner." It's not that I care, per se, it's just that it's so blatantly and patently incorrect, it's almost offensive to the readership that you would expect another to buy into such a mindset you have created. I point these things out, ya' know,,whcih is why I am designated a dangeroous individual to those who wish to curb freedoms, such as Dave (the Hypocrite) Hall, WA3MOJ, Frank Gillinad, N8WWM, adn KC8LDO, You are rapidly declining to their status, Mr. Oyen. I suggest reassess your objective, lest you be reduced to tossing tiny pebbles from the shadows like the pseudo-anonymous attempts of Dave and Lelnad.

_
If you want to show me where in the FCC
rules it governs foreign stations, be my guest.

>Why don't you check the treaties that the US
>has with many other countries (its all in the
>ITU rules).

There is absolutely nothing in the ITU that concerns the FCC governing any foreign stations. Period.

>why do you think that most places have similar
>allocations of space on the HF bands?

MOST places? Gee, Eric, you really are clueless on this freeband issue, as are those that feel the need to make a post personal due to a massive defect in effective communicative technique. "MOST" places have no method of dealing with what you speak,,,the majority of smaller countries and locales across the planet certainly do not have allocations for space on the "HF" band, Eric...they don't give a rat's ass about American hammies,,as matter of fact, most Americans don't give a rat's ass about hammies or cbers.,,,this doesn't sit well with certain

hammies who fail at attempting to demand respect simply by virtue of licensure.
They act out their feelings iby attacking others merely because they are befuddled and cornfused about how to properly express themselves and it

angers them. Again, you appear to be on your way to the dwelling with the sub-hammies,,,,,is this what the amateur creed represents, Mr, Oyen?

Are you also a member of hammie organizations? Or are you merely a lone trouble-maker, like the lids in this group who have been outcast by hammies due their nature, and by default, cling to each other like dying desperados at the end of a cheap western.

_
>The FCC is strictly a US agency and thats
>where I was addressing my comments.

Ahh,,another hammie with a power-hungry jones that needs to tell others what to do in order to feel better about himself. Stick to hammie radio, better yourself, and clean your own backyard prior to attempting another how to operate.

>gee, you put a lot of spin on that one.

MR. Oyen,,In the context in which you deliberately removed it from and re-presented it, one may actuall believe such bullshit,,,but it was in response to the comment of you made and snipped:

>otherwise, stick to 11 meters (the class D
>channels if you please) or get your ticket
>(amateur radio) and rgchew with a bunch of us
>on bands you only dreamed of operating.

It isn't spin at all when presented in it's original context that for some reason, you went out of your way to snip and eliminate. And speaking of spin, you actually introduced what you refer "spin" when you made your initial comment concerning myself, which you know nothing of. Add to that your selective snipping, and your "spin" is quite noticeable. Are you another hypocrite, eric, that cries like Frankiestein when he gets back what he dishes out to others?

>perhaps we should take this up on the O'reilly
>factor?

And about as non-sensical as the crank-happy (oh excuse me, ex-crank,,,you know, like ex-illegal cber) user (the Hypocrite) Hall.

_
That explains it,,...555 is locked up in Phoenix and s free-for-all... Perhaps the fact that all that lawlessness on 555 in your own back yard that has been going on for years has angered you to the point of no return,,no wonder you have a hard-on for freebanders. Buy a better radio, prehaps something with better rejection, perhaps a beam,,or maybe, give it up altogether if it makes you so upset,,a hobby is suppoosed to be enjoying and relaxing,,yet, you seem to fit the stereotypical mold of a lid harassing all that he fails to comprehend. Trust me, the majority of those in here want nothing to do with these "dream" frequencies you speak of, if you are the example of what to expect.

_

>small problem with that. I don;t have any
>equipment to go there,

_
What equipment do you run, Eric?

>so how would I know
>thats its strictly a problem in my back yard?

Gee Eric, you just effectively ruined Frankiestein's, WA3MOJ's, KC8LDO's, n8wwm's, and Dave Hall's argument that those nasty illegal freebanders continually interfere something awful with legal amateur services,,,,it's a known fact that Phoenix is about the most lawless radio town in the country for freeband,,,big power coming out of Phoenix on 555 for years on end and you experience nothing.,,nada,,why, you claim you're not even aware of any problems,....LOL

>I only have your word on it,

No, you have the word of the abve mentioned lids, but as they are confirmed liars and not one managed to maintain an original email address from any length of time,,I share your skepticism.

>and so far, you

This isn't about me, as much as you may wish to make it. Cling, Mr. Oyen, cling to those lids who are actively circling your hammie status and adding to your rapid decline. Failure and misery love company.

>haven't exactly proven yourself to be
>trustworthy, now have you?

Addressing your inquiry, to which conversation we had in the past do you attribute such claims, or are you merely advancing your sheople status in keeping with the angry minority lid group among us? But in keeping with addressing your inquiries, such as "how do I know it's a problem in my back yard?",,,well, Mr, Oyen,,YOU wrote....

>sir,
>freebanding is NOT a hobby.
>its a deliberate and amlicious violation of
>federal rules and regulations (those being
>policy, and thus according to the US supreme
>court, have the affact and power of law).
>you want to attract attention, fine. just don't try
>to take others with you when you go down.

Once again,,in the first place,..addressing your claim of "How do I know it's a problem in my backyard?" Well, who were you professing to be speaking for in the above, Mr. Oyen? Someone elses backyard? LOL! And despite your refusal to acknowledge the existence of something merely because your myopic scope prevents you from agreeing with such, freebanding is indeed a hobby. Merely because aspects of it may be illegal in the US does not make it any less a hobby. Misconstruing a

post about freebanding as an attempt to "take others down" illustrates
the gravity of your maleficence, intended or ignorant.

>DE N7ZZT
>Phoenix, Arizona
--
>the difference between intelligence and
>stupidity is that intelligence has its limits.
Too bad ignorance isn't painful.

That's the way to do it. By the time, I got my General, I was actually
pretty used to HF operation. As a tech, I had operated in some contests
that the club participated in, plus a field day. (to the sticklers -
yes, with a control op)

They tricked me! Got me hooked on contesting, and I had no choice but
to upgrade!!! Well they really didn't trick me, but it worked out that
way anyhow.

But every time I try out a different mode, I spen weeks listening
before I ever transmit. I hope these new people will do the same.

> So the "turn off" command would be OK to encrypt, but not the data coming from
> the remote sensors.

I see your point. How about this, though:

97.217:

"Telemetry transmitted by an amateur station on or within 50 km of the
Earth's surface is not considered to be codes or ciphers intended to
obscure the meaning of communications."

97.3(45):
"Telemetry. A one-way transmission of measurements at a distance from
the measuring instrument."

Also, 97.309(b) indicates that unspecified codes can be used so long as
the purpose is not to obscure the meaning of a communication.

Thanks for your input,

-Leo

Well, all I can say is feel free to send me an e-mail ANYTIME after your upgrade and you want to get on the air to practice. We'll find a nice quiet area of the bands and go at your speed. That goes for Len also.

Used to be back in the sixties. Think it was 2 or 3 years actual on the air experience as General or higher (class A, Advanced) then you could take the Extra test.

At this stage of the game. And based on what I read here on USENET, and
what I hear on the bands I would have to say uninformed by a landside.

I am being paid by UC to do research in general. I would not receive
compensation as a result of this specific research, so in my mind I have
no pecuniary interest in the project.

> I would think that the University already has or can easily get

I will look into this suggestion. We are working with someone in another
department who had to get an FCC license to use some VHF spectrum;
either he didn't do his research or the UC doesn't have anything suitable.

The basic problem is that we want to place our sensors in areas where
existing infrastructure is missing (no phone lines for example). We
could buy satellite uplinks, but that would cost a lot of money.

It sounds like my idea is closest to violating 97.113(a)(5), i.e.
regular communications that could be reasonably (albeit expensively)
furnished through other radio services. What is your opinion, does cost
factor into the "reasonableness" of alternative radio services?

S. Sampson wrote:

of the

> research, then the ARS should not be used.

I'll have to check on the patent issue. Our goal for this project, however, is wholly noncommercial. It would simply exist to facilitate research. And ultimate, it wouldn't use ARS. I'm just thinking about the first 1-3 years, when we are setting things up and experimenting, that ARS would be very suitable and (possibly) appropriate.

Thanks again for your valuable input!

Yes to bothya'! It really isn't just the book learning.

Seriously, I learned so much in that first year that I really only now consider myself a "real" extra, and at the bottom rungs of the ladder.

But I'm a quick learner.....

Steve:

What do you mean, "no excuse remaining?" There are plenty of excuses remaining. As long as a written theory test (if you can call a multiple-guess test a "written" test) is required, there will be people whining and complaining about having to prepare for it and take it in order to obtain a license in whatever's left of the ARS. So, we'll change the debate over to whether or not the ARS is a "technical" service and whether the testing should be changed into something more dumbed-down than it already is. After that, the next bone of contention will be whether or not a prospective ham should be required to know how to spell his name correctly on the application!

> extra 100kHz to us too. It would be nice to be able to use 40m for
> SSB to the U.S., something I can't do now.

The bottom line biggie with respect to the 20+ year effort to
"harmonize" 40 has always been to open up more spectrum space for what
we consider "the DX". Finally being able to SSB transceive with the DX
on 40 should be an added benefit but I have reservations about how
well that will actually work in practice. Under the best of conditions
decent reliable copy by both stations between 4X4 and W3 is going to
be difficult to find. It's simply the nature of the beast we call 40M
phone.

> Since the novices are just about gone, IMHO the U.S. should drop the
> 7.1-7.15 mHz CW band.

The U.S. "CW band" is 7.000-7.3000 . . .

> Actually what I would like to see is a worldwide
> 7.0-7.2 mHz 40m band, with the following "band plan"
>
> 7.000-7.050 CW

As a CW contester I disagree with this one. All the major CW contests
(I can count at least four of those per year) take over at least the
lower 40 kHz +/-. If only the remaining 10 kHz were available for

non-contest CW operations on those weekends I think the howls of protest would set some new records.

> 7.050-7.100 Digital
> 7.100-7.200 SSB voice, no SSTV, packet, etc.

Methinks *nothing* should be done along any of these lines until (a)there is a significant volume of Region 1 & 3 operations in the 7.1-7.2 segemnt and (b) the impact of the elimination of code tests in many countries can be gauged via experience. Fixing things we don't even have yet is not going to have much sex appeal at the FCC or amongst the bandplanners.

The writtens WERE restructured back in 2000. The number of tests and the total number of questions were reduced.

There were all sorts of suggestions in the comments submitted about how to improve the writtens, but the FCC ignored all of them and reduced the written testing as well as the code testing.

You shoulda been here a couple years ago when certain folks were telling us what wonderful technologies we'd have it weren't for the code test. One of the

most vociferous is now Executive Director of NCI. He'd lecture us on how primitive Morse Code and other modes hams use are, compared to what was possible.

A year after the 2000 restructuring, he went from Tech Plus to Extra and went on HF SSB, working DX with a manufactured transceiver. Last I heard he had over 70 countries. Surreal.

>Do people who do not have the time to take the morse code test have the

>be rude, but I'll take over now". I came back the next morning and saw
>the results of his work. Six QSO's! He was woring at the rate of 1 QSO
>per hour under *good* band conditions!

Been there, done that.

In fact I recall a certain FD a few years ago. Another rrap regular whom you may know was working 20 CW, making about 40 QSOs/hr with a terrible antenna. He was pressured into shutting down so that some folks could use 20 phone. Two hours later, they had put maybe 4 contacts in the log. They complained that the

band was dead - so he sat down and proceeded to put a couple dozen in the log on the "dead" band.

I recall another FD when somebody came over to the CW tent 3-4 hours into the contest and wanted to know how I was doing. I said "just OK - only about 150 so far". Guy cussed me out and called me a liar. So I showed him the log sheets. bwaahaahaa

Until 1952 when the license class was closed to new applicants, one year of
experience was required before you could try for the Class A/Advanced.
"Experience" did not include time as a Novice or Technician. When the Advanced
was reopened to new applicants in 1967, there was no experience requirment.

From its origin in 1951 until the mid 1970s, the Extra required two years'
experience. The requirement was then reduced to one year, then eliminated in
the late 1970s.

Of course there was no requirement to actually use your license during that
time.

I got my Advanced in the summer of 1968, age 14, and counted the days until I
could try for the Extra. On the first day it was legal to try, I was at the FCC
office to take the Extra exam. Passed it on the first go. No big deal, there
were Extras a lot younger back then.

Good point!

As I interpret it, what this means is that the telemetry message doesn;t have
to be self-explanatory. For example, a remote sensor might report "534A0" as a
telemetry message in, say, ASCII, which is a "specified code", but there's no
need to have the remote sensor indicate what the symbols mean.

From: yodoc@aol.comnospam (Larry Roll K3LT)

>So, we'll change the debate over
>to whether or not the ARS is a "technical" service

The ARS will not be a "technical" service with the current Ham radio culture. Most homebrewing is for show or to boost the image of the ARS. They are too snobby to include someone that is interested in Homebrewing. Or its some EE that usually doesn't attend meetings.

The clubs and Hamfests focus on antennas, contesting, and CW. With the exception of antennas, ARS is primarily an appliance operator hobby. One example is people coming from scanner or CB to ARS. Another example is the comparison that "without CW, its just CB". Note that CW is an operator skill.

ARS is not a technical service because Hams have "voted" by their actions to not do these things. Furthermore, they discourage other amateurs from doing other than what they like to do. They also strongly encourage others to learn CW. At several antenna setups, club meetings, ham gatherings, I have participated in, often Hams try to persuade me to learn CW.

>and whether the testing
>should be changed into something more dumbed-down than it already is.

>After that, the next bone of contention will be whether or not a prospective
>ham should be required to know how to spell his name correctly on the
>application!

To you, taking away one requirement (the CW test) is dumbing down because its one less requirement. If more people focus on the written material, ARS could be more than an operator's hobby and more of a technical hobby. That's not dumbing down of the hobby.

It is only required 5 wpm CW speed, yet many Hams take pride in increasing their code speed. The easy written test is not the problem. Its lack of interest in the technical material, and achieving skills in these areas - that's the problem.

Fill out the questions on the back of the box (the written test). Then, you
just need 2 UPC codes from 2 boxes. Mail 2 UPC codes with written test and you
will get your license..

Yeah, I know many of the newbies and rusties complain about how the
GOTA station "isn't working" when I know it is. Lots easier to make
QSO's on thos 1KW stations.

It really is about 80 percent OP and 20 percent rig.

Som Extras are going to look mighty foolish.

It isn't the long winded messages, Kim. The header comment refers to the message reference list in the messages you replied to (part of the header information included with all reply messages, used by news programs to thread messages). Since that reference list was so long, your news program or ISP cut some of the information off. This was neither your fault (it came from the message you replied to) or anything for you to really worry about.

The message you replied to was posted many days ago as a commentary on the speculation at that time surrounding the test requirement issue at the ITU meeting. Clearly, since that message, the issue has been resolved - ending the speculation.

> Thus it is now up to someone to petition FCC to
> remove the requirement from US regulations.
>
> Let the games begin (again).

Yes, now the speculation has begun concerning possible future FCC actions in response to the ITU decision. That should be good for many weeks of additional speculation and argument.

You are correct in one regard....."Don't hold your breath" is about the best comment I have heard here. Existing technicians may choose to utilize their new privileges but the dropping of morse code completely is not going to bring up our numbers any more than where we are at right now from a month to month basis.

You could hand out free licenses with $100 bills attached to them but if people are not aware of that, they are not going to be giving out that many. It's all about the public relations/promotion of the hobby.

"N2EY" wrote in part ...

In fact I recall a certain FD a few years ago. Another rrap regular whom you may know was working 20 CW, making about 40 QSOs/hr with a terrible antenna. He was pressured into shutting down so that some folks could use 20 phone. Two hours later, they had put maybe 4 contacts in the log. They complained that the band was dead - so he sat down and proceeded to put a couple dozen in the log on the "dead" band.

When I started working CW, one of the first things I did was get involved with traffic nets. Slow ones at first, then the State net, then Regional. One of the advantages of working high speed traffic nets is learning how to copy fast under very poor conditions. Seems to pay off during Field Day. I had the same experience this year at FD as you. Between the two of us, we were logging an average of 75 or so contacts per hour, while the SSB boys were doing about 10. Dead bands plus QRN, QSB and all those repeats, I guess. :-))

ARS is not a technical service because Hams have "voted" by their actions to not do these things. Furthermore, they discourage other amateurs from doing other than what they like to do. They also strongly encourage others to learn CW. At several antenna setups, club meetings, ham gatherings, I have participated in, often Hams try to persuade me to learn CW.

And they SHOULD. I always strongly encourage Hams to learn CW. It's a great skill to have. I didn't blink when someone encouraged me to learn about SSB operation, Manual tuning, PSK, Antennas, and APRS. I found all of them very interesting and it added more tools to my ARS toolbox. You make it sound like CW is something that should be avoided at all costs. You couldn't be more wrong. It is narrow attitudes like yours that hurt the ARS.

That depends on how many existing Hams on HF take a crappy attitude towards the upgraded newcomers on the bands. After seeing the poor attitudes shown by several of the more frequent posters on this news group over restructuring etc., I wouldn't let them near a radio, with or with out a code key. They are a perfect example of what Ham Radio is not all about. On the other hand the only good thing about them is many are old timers, who if we wait long enough will be SK's, then we can get on with things without the name calling etc. The only choices they have is either go with the flow, get out of the way, or get run over by the changes. Rolling back the clock is not an option.

Well DUH! So it isn't FREE through the AARL either or are you
saying the ARRL will pick up the fee for renewing a vanity call
sign? Yea right. Renewing a non-vanity call license is FREE if you
do it directly with the FCC.

Welp, since the name of the operation is No Code Test *International*
their work is far from done. Seems like code tests will continue in a
number of countries, Russia, Germany, China, the Arab states, etc. NCI
will have to schmooze the likes of Putin (Col, ret. KGB), Jiang and
the lop-yer-head-off Arab sweethearts before they can claim mission
complete. Squiggy gets Yemen, Sohl gets Mongolia for openers. Oughta
be interesting.

You are the one being the smart ass. You said that license renewal
was free through the ARRL if one was an ARRL member. I did not
disagree with that, but I stated that license renewal was free
through the FCC and ARRL membership has nothing to do with it. You
then, with a smart ass comment, said "Sorry...ain't so. Vanity
calls require a payment." No one, including you, said anything
before that point about vanity call signs. Well DUH! Vanity call
signs require a fee to obtain in the first place. So to your
comment that renewing is free through the ARRL for members, my
reply is, "Sorry ain't so. Vanity calls require a payment." So
YOU need to stop being such a smart ass.

Actually as a point of interest, and maybe a little trolling, Just WHY
should there be testing for a ham license?

Isn't limiting access to the Airwaves to only those who pass some kind
of test Elitist?

What of those who simply aren't smart enough to pass a test? are they
not human and have rights?

As for RF safety, I would point to the successful efforts of Motorcycle
riders to abolish helmet rules. It should be the individual's
responsibility to decide if RF safety matters are important to him or her.

As for mode specific questions, they have no business asking me about
modes of operation that I am not interested in.

No Test International could be born now!

Thoughts?

And which "one less requirement" WILL be "dumbing down", Vippy?

We've castrated the written tests and now the last vestige of
operator competencey has taken it's final breaths.

> It is only required 5 wpm CW speed, yet many Hams take pride in increasing
> their code speed. The easy written test is not the problem.

The "ease" of written tests is subjective, Vippy. If the present
tests were sequestered, like they should be, the tests wouldn't be as
easy as they are now.

Other bands, particularly 15 and 20, have been offered in the past by Belcom, Tokyo HiPower, Mizuho and others. I think more of this kind of thing will surface in the near future.

I simply *refuse* to buy a box of Cheerios just to get a Ham license.
Although my interest in the ARS is boundless, It IS unfair to make a
person buy a box of Cheerio's! it is keeping thousands of Technically
competent Cheerio's haters off the air!

I never intend to eat Cheerio's, and I know I never will. So why should
I have to buy a box of Cheerio's just so I can get a Ham license?

Unfair, Unfair, Unfair!!!! It's just another ham cult hazing ritual.....

Here's and interesting query...and probabbly a tad trollish, but I wonder...

How long (or short, actually) will it take for many of the No-code Techs
that used to proclaim that their VHF and up allocation was all they wanted
because it completely satisfied their "technical" needs to suddenly become
Generals and Extras. I seem to remember reading how they could pass Element
1 if they wanted to but it would gain them nothing. I wonder if that's
changed?

Source record: 70339
Cross-posted to: rec.radio.amateur.policy,alt.ham-radio.vhf-uhf

From the July 2003 issue (pg. 37) of PC World Magazine...

A brazen new competitor to DSL and cable is
"within striking distance of being the third
major broadband pipe into the home," says FCC
Chairman Michael Powell. Broadband of power
line, or BPL (currently being offered in pilot
programs by a dozen or so utilities around the
country), promises to deliver high-speed
Internet access straight from the electrical
socket in your wall. Long written off as an
also-ran technology, BPL has new spark, thanks
to technical advances that address problems of
interference and in-line transformers that
scramble signals. The last hurdle will be getting
FCC approval. Considering Powell's enthusiasm -
the general belief that BPL will cost less than
cable and DSL - a green light could be imminent.

While everyone would obviously like cheaper broadband internet access, my principle concern is the possible interference with ham radio out here in the real world - the real world of corroded and rotted old power lines, decades old transformers and power stations, and the ancient (often poorly grounded) electrical wiring in old homes and buildings throughout this country. Like many others, I suspect this technology is going to have a dramatic impact on ham radio.

Does anyone know about these touted "advances that address problems of interference" mentioned above? Are these "advances" really going to prevent potential interference problems out here in the real world?

>at any particular time.
>
Back in the early days of my HF career, I figured that if the band seems empty, well either
propagation is out or everyone's asleep or at work or such. In any event, there's nobody
to qso with, so check other bands.

After a while, one figures out that on say ten meters, you can (when the sunspots are in)
talk to Texas from NJ, but not Ohio. That the coverage looks more like a ring instead
of a disc. Which also means that the ham in Texas can hear a ham in Ohio that you
cannot hear. Thus you could QRM a Ohio to Texas QSO while doing a QSO from NJ to California. Thus you should realize that the Texan isn't talking to himself, but
to someone you cannot hear. And QSY up or down a little. But say you're using
a kilowatt linear to QSO from NJ to California, and the Texan is only using 50 watts
and is S1 on your receiver and thus you don't know that he's there. BUt things like this
happen, and it is understood that it is not malicious.

Its all hype Dwight. Ask the brits what it sounds like. At 3 meters it is 30db over S9. So if your in the house, or next door, or down the street, or if the band is open, on the next continent....you aint gonna hear nothing but trash.

Last count was FCC got about 1800 replies to the NOI. Boy that shows the hams are really aware don't it?

The current writtens are a mixture of rules and regs, theory,
operating practices, and RF safety. They have been in constant
revision and development for over 20 years. I don't see them changing
all that much.

What sort of "practical operating knowledge" questions would you have
the QPC add? (Anyone can submit questions for review, btw).

> I've long
> felt that it was time for the CW testing requirement to go, but the

> need to change.

One of the problems with skill testing is that the test has to
actually include the skill - it can't be a purely paper test and
actually mean anything. (You can't judge my bicycle-riding or
stick-shift skills with a written test). And such testing means a
separate test element and the same problems that come with the code
test.

> advantage of the opportunity.

I agree with all of the that - but a lot of it comes down to publicity
for the ARS, and the simple fact that most people are not interested
in radio as an end in itself. There's a limit to how much we can
"sell" amateur radio. The trick is to identify those who are really
interested, and help them out.

> Those of us who spend our time coming up with witty and derogatory
> names like Extra Lite and insist on distinguishing between No-Code and
> Know-Code and go out of their way to make people feel like

Agreed - and I challenge you to find any postings of mine where I have
done any of that.

> >The dropping of the code test will not be accompanied by a significant change

> >technorevolution, nor big increases in experimentation or homebrewing. Just
> >more of the same of what has been going on.
>
> Again, this depends on us.

To a certain extent. There are not many hams who will homebrew
themselves a multiband multimode transceiver from scratch. Even if
someone has the time and tools, it's usually not cost-effective.
>
> Hmmm...lemme see...we're faced with the possibility of having a lot of

Sure.

> of those in this forum where I know the subject has come up
> previously? How many hams in your local club know what ALE is? How
> many would be willing to accept and use it if they did?

Many of us know what ALE is, and even how it could be used on the
amateur bands.

The bigger question is - why would hams want to use ALE for normal
amateur operation? The whole point of ALE is to reduce/eliminate the
need for a knowledgeable operator. In fact, if you look at most
nonamateur radio equipment design philosophies, one of the driving
forces behind them is to replace the skilled "radio operator" with a
relatively unskilled "user", who doesn't really know what's going on -
and doesn't have to. Consider the nearly-ubiquitous cell phone - none
of the radio-specific functions are controlled by the user at all! In
fact, far too many people don't even realize a cell phone is a radio
transceiver. (I recall an indignant fellow airline passenger telling
me "I can use this while we take off! It's a TELEPHONE, not a
RADIO!!")

> once upon a time.

All true. Actually, it doesn't seem like that long ago that I was a
newcomer.

But there is also the reverse problem: Newcomers who do not want
advice or elmering from the "old f@#$S", no matter how it is offered.
I've been on the receiving end of that more than a few times. What's
the right approach - just ignore them?

It sure will, if it's allowed to be implemented.

FCC Docket 03-104 addresses implementation of these systems. Comments
close today. ARRL submitted a 120 page paper on the effects of the
proposed systems. None of it is good news for hams.
>
> Does anyone know about these touted "advances that address problems of
> interference" mentioned above? Are these "advances" really going to prevent
> potential interference problems out here in the real world?

Basically they come down to two ideas:

1) spectrum masking, which consists of not allowing the BPL systems to
use frequencies in the ham bands. Which is fine until something
nonlinear in the system causes intermodulation products, harmonics or
other spurious signals to fall in the ham bands. This method was used

to stop HomePlug and other in-building systems from tearing up 80 meters - AFTER our own W1RFI and other ARRL folks got the manufacturer to recognize the problem.

2) "improved modes and modulations", which permit the use of lower signal levels and hence lower signal leakage. Supposedly.

The BIG problem is obvious to anyone who actually goes out and looks at a typical aerial distribution system. Lots of nice, long wires, way up in the air, running all over everyone's neighborhood. Put a little RF in them and watch it radiate.

Heck, one of the biggest problems in access BPL is that the lines are "lossy" at RF. They're "lossy" because they radiate!
>
You can read the comments of others and leave your own at the FCC website, via the ECFS system. Check out what the ARRL is saying and doing at the ARRL website.

> and one for full HF privileges in addition to that).

I disagree!

The only reason to separate HF and VHF/UHF is/was because of the code
test. HF licenses had to have code tests because of the old treaty.
Once the new one is ratified, that reason goes away.

Seems to me that in a nocodetest future it would make much more sense
to let all hams have access to at least partial privileges on most ham
bands, rather than continuing the artificial HF vs. VHF-UHF
separation.

How about this: Three classes of license - call them Third, Second and
First for discussion's sake.

Thirds have a simple written test and get to use a few modes (CW,
SSB/FM phone, some data) on parts of all bands. Power limit is below
that requiring RF survey. Callsigns are six characters, and Thirds
can't be repeater control ops or VEs.

Seconds have more modes, more space on the bands, and more power.
Callsigns are five or six characters. Seconds can be repeater control
ops and VEs. One year experience as a Third required.

Firsts have all privs, callsigns with four, five or six characters,
etc. One year experience as a Second required.

You get the general idea.
>
> 1. FCC remains under a congressional mandate to simplify regulations.

I think what FCC wanted several years back was pretty close to what
they actually did - 3 classes of license, minimal or zero code
testing. No medical waivers. Less written testing, too.

Kind of early ain't it? Or are you talking about the 12 cities that are participating in the initial test?

You really need to just put every licensed hams callsign in the complaint. Because that is who will be affected.

Well Scott Unit 69...the facts are this. If you operate on HF or VHF they
you will be blasted off the air by this new/old technology.

They will be sending data on RF CARRIERS through the power grid.
Effectively connecting RF to extremely long radiators that will propagate
all over the spectrum and totally trash your radio. Clear enough?

What I would LOVE to see is a set of 50-question elements on EACH
of the topics which you listed plus operating practices. Make it an
all-at-one-sitting procedure. Just like the olden days......

Let's make it more fun, and do it like the Nursing Board exam that
my daughter took several years ago:

The questions come out of computer at a speed which is dependent on
how fast the applicant is answering them. Scramble the qyestions
and the multi-choice answers so that if one memorizes the "little
red book" of all the questions and answers it won't help unless
s/he understands and knows the material.

The machine keeps feeding questions until it is a guaranteed "pass"
or a guaranteed "fail" and then it terminates the exam session. The
applicant does not know whether s/he passed or not until the
results are sent by mail. Just like the olden days.....

I'm sure that there are enough ham-programmers that can write such
a program.

> get an Advanced any more.....I had to wait until 1968 to get mine,
> and that was before the "incentive licensing" splitups started.

Musta been a really interesting time back in 51-52. First FCC restructures (1951). Back then you needed an Advanced (old Class A) or the newly re-created Amateur Extra to have full privileges. Also, no new Advanceds after the end of 1952! Which meant that newbies who got Generals or Conditionals after Jan 1, 1952 would have to go for Extra instead of Advanced if they wanted any amateur HF 'phone between 2 and 25 MHz.

There was a big rush for those with the required experience to get Advanceds before the end of 1952. A few even got Extras. Then, just before Christmas, FCC does a complete 180 and says "never mind, all Generals and Conditionals get full privs as of mid-February, 1953". Huh?

I can just imagine the squawking of those who had invested serious time and $$ to get the licenses before the door closed, only to find it carried no additional privs after a few weeks. (Back then the Advanced and Extra were only available at FCC exam points unless you lived in the remote parts of some of the territories and possessions. For many hams, just getting to an FCC exam point in those pre-interstate-highway days was a major undertaking. And FCC gave no credit for by-mail exam elements - if a Conditional wanted an Advanced, he/she had to retake the 13 wpm code and General written at the FCC exam point before being allowed to try the Advanced.

--

I got my Advanced in the summer of 1968. I went to the Philly FCC office early in the summer and passed General theory and flunked 13 wpm code because the examiner could not read my writing. So I got a Tech to go with my Novice, back when you could do things like that. One callsign for HF, different callsign for VHF/UHF.

Went home and taught myself how to block-print and copy code at 18-20 wpm. Showed up at FCC office after the required 30 day wait and passed 13 wpm easy. Examiner says "why not try the Advanced while you're here?" so I did. Passed

with no problem even though I had not studied for it. Not too bad for a kid of 14, between 8th and 9th grades.

Doesn't seem like almost 35 summers have gone by since then.

Actually, that makes sense IF the effects can be contained to just the person
making the decision. But that's rarely the case.
>
> As for mode specific questions, they have no business asking me about
>modes of operation that I am not interested in.

I learned about televison screen aspect ratio and interlaced scanning because
it was in the Extra study guide back when. I've never operated ATV.

You DO know that Federal case law vests the FCC with exclusive
jurisdiction in radio interference matters. See _Broyde v Gotham
Tower, Inc_, 13 F 3d 994 (6th Cir. 1994). Save yourself the trouble
of having thr case removed from whatever court you intend to file in
to the FCC.

That's what happens when you don't have to have non-technical
politicians ratify a technical treaty and then send it to an
agency/department for ministerial action.

No doubt they were ready to go even before the WRC began.

Wrong. For license renewals filed via the [ARRL's] volunteer examiner program by non-ARRL members, a processing fee is still supposed to be applied. Some VE teams do not enforce this.

1) Because they don't have the time (and don't realize it only takes 5 minutes)?
2) Because they're computer illiterate?
3) Because they're stupid?

I consider #2 above to be the only semi-valid reason (and semi-valid only
because they can often get help or a friend who is literate to do it for them).

If #1 is the reason, then when do they even operate?
If #3 is the reason, then how did they get a license in the first place?

BS. I use dial-up and it took me 2 minutes about 2 months ago.

Now, if one were to try to renew via a chain of 300 baud HF TCP/IP packet radio links, then timeouts would become an issue. :-)

Robert Casey <wa2ise@ix.netcom.com> writes:
>
> Why do people outside the USA call countries "states"?

Because "state" means "country". It meant that to the US founders,
too: in 18th century English, they named us "The United Nations of
America", and envisioned each state as sovereign except in matters of
war and commerce.

Subsequent developments robbed states of their autonomy, and reduced
them to provinces. Pity.

I don't know, Phil. My license expires in .. um ... September? I'd get my wallet and check, but I know I'm close. The question is, can I renew and get the call change all at once (you can get the call sign you want, but it doesn't extend the expiration date of the license), or do I renew a day after it expires to ensure a 10 year period before I shell out some serious micro-buck$:)

Your experience, NOT mine. I have a dial-up 56k and it took over 4 hours.
The Java software had to load, then it took another hour to send the info
and confirm my renewal. If you already had the software on your system,
then that could account for the speed.

Aw, Phil. You're spoiling the fun. There shouldn't be tests. Not even driving tests. That way, the drunks who kill folks won't have a license to take away. That would violate their rights. Of course, they'd still end up in jail, but if they don't cause any injuries nor accidents, let 'em drive on! Say, btw, I hadn't thought of hunting since they outlawed lead. Phil, could you put me in touch with someone in the government that would sell me some spent uranium so I could use that for the 12 gauge? It would carry a lot farther than lead shot!

Jim,

I'm going to have to look up that one. I recently went to Burger King (sigh ...). They were running a special - two burgers and two small fries for $2.22. I ordered four burgers and four small fries only onions and ketchup on the burgers (this is a very difficult problem; break out the slip stick and multiply $2.22 times two). Now add two Whopper Juniors at $0.99 each. Um ... about 2 seconds to come up with $6.42. Then the sales tax. Ok. This poor gal starts pressing all these buttons and comes up with something very close to $10.00. I asked her what the sales tax was. 8%. Wrong. 8.25%, but I was being accessed nearly 50%. She looked hopelessly lost, so I offered that it should be $6.42 plus 8.25%, or something short of $7.00. She started pressing more buttons. She smiled, hit enter (or whatever) and then expressed dismay as the total was now around $15.00. She called the manager over. He explained what she did wrong, hit some buttons, smiled ... and stared at the total - now over $29.00. I was beginning to think I'd be better off at Radio Shack. This problem is a *lot* bigger than amateur radio. They threw out the regents math test in New York since so many kids failed. I recall one point was made that it included geometry (unfair). Huh? I don't know what folks think math includes, but if it is button pushing, I've met one manager that would have failed button pushing 101 :)

Say, have you seen the ad on TV touting one quick oil change place (was it Jiffy Lube?). They have folks that have been 'certified' by an organization called something like 'oil change specialists of America'.

Seeing these sort of events lately, I'm wondering if others have had similar experiences. If they have, is there a chance they might see some wisdom in having some kind of exam before turning someone loose with 1.5 KW of RF and perhaps thousands of volts in their amp? Yep, I didn't think so either. :)

As to the ATV, remember the flying spot scanner? :)

Phil, I doubt you're kidding, but a single wire with a ground return? That is going to have a ton of problems even *without* putting broadband on it. My guess is if it is implemented, everyone should look up all am radio stations that they fall in the secondary service area of (or near the limit of the primary service area) and find one or more that the system interferes with. Then complain to the commercial station and the FCC that you want to hear the commercial station. The FCC tends to react to problems involving commercial radio stations quite quickly (as some outlaw FM broadcasters have found out). I wonder how the broadband will impact the newly developed am stereo broadcasting? At least the commercial stations have deep pockets (since there are only a few owners of almost all the radio and television stations in the US nowadays).

I would renew it now if it is within the 90-day window. That can be
done on-line.

Once that is done (check the ULS a day or so after the on-line
renewal) THEN apply for the change of call sign. You can do that on
line as well.

It's just like when we applied for the club station license - it had
to be issued as a "sequential series" 2X3 license before we could
apply for the change of call sign (which was also a 2X3).

The only contacts I have are folks who deal in spent money - gobs
of it. My overseas contacts, however, know how to "borrow" it but
that's another story.

When I was a street cop eons ago in a bad neighborhood we tried to
find someone who could put a critical mass into a 357-cal. shell but
we weren't successful. My Master's Thesis advisor at UCLA wasn't
interested in me doing that sort of research.

The one guy in our unit who owned a machine shop as his "day job"
would, however, turn mean 3-cell flashlights out of steel pipe in
the era before Mag-Lites. The "powers that be" didn't want to know
about it......

Mike:

In light of recent Supreme Court rulings re: Affirmative Action, I think that any person who considers him/herself to be a member of a "minority" class should be automatically granted an Extra-class Amateur Radio license without any testing whatsoever. After all, amateur radio is supposed to be "inclusive," isn't it?

Dwight:

I've got news for you: Get ready for it! We hams have dumbed ourselves
down to the point of irrelevance, and money-making consumer technology
like BPL that will bring high-speed Internet access to millions of consumers
will always take precedence over the needs of a few hundred thousand
hams who have virtually zero economic impact. Personally, if inexpensive
high-speed BPL Internet service were available in my area, I'd be all for it!

BTW -- the irony of the BPL situation is that the ham radio mode best able
to overcome the potential interference is good ole fashion CW!!! And that,
my friend, would be no problem for yours truly!

>comparison that "without CW, its just CB". Note that CW is an operator skill.

Yup -- got it right that time. CW *is* an operator skill. Do you have something
against operator skill -- or are you one of those New Age hams that think yakking into a microphone is all the demonstration of operator skill that should
ever be required of you?

>ARS is not a technical service because Hams have "voted" by their actions to
>not do these things. Furthermore, they discourage other amateurs from doing
>other than what they like to do.

Funny -- nobody has ever been able to "discourage" me from doing anything I wanted to do. I just went ahead and did it. I could care less what other people think, do, or say as far as my personal participation in amateur radio is concerned. Moreover, I don't waste valuable time whining about it -- as the no-coders apparently are inclined to do.

>They also strongly encourage others to learn
>CW. At several antenna setups, club meetings, ham gatherings, I have
>participated in, often Hams try to persuade me to learn CW.

And this is a bad thing? How so? If you were around me at an antenna party, I'd be nagging you to get involved in PSK-31 and other digital modes in addition to the CW! It's all good!

>one less requirement. If more people focus on the written material, ARS could
>be more than an operator's hobby and more of a technical hobby. That's not
>dumbing down of the hobby.

Well, you no-coders have always claimed that exact thing, but what has
happened is that ALL licensing requirements have been significantly
"dumbed-down." However, in spite of it now being easier than ever in the
history of the ARS to obtain a license with full privileges, our numbers are
not showing significant growth. What is wrong with this picture?

Oooooohhh. I guess it is the "attitudes" of all the CW-loving fossils
like me that is turning off the newcomers. Right. (There you go, Kim --
I saved you a few keystrokes!)

>It is only required 5 wpm CW speed, yet many Hams take pride in increasing
>their code speed.

Well, we can't have any of that now, can we?

> The easy written test is not the problem. Its lack of
>interest in the technical material, and achieving skills in these areas -
>that's the problem.

Once again, I don't disagree. Soooo -- what are YOU going to do about it?

This is not "negativity," just a plainly truthful assessment of the present situation regarding licensing standards in the ARS.

>>So, we'll change the debate over
>>to whether or not the ARS is a "technical" service and whether the testing
>>should be changed into something more dumbed-down than it already is.

>or HT, or an Icom 706MKIIG or Yaesu FT-100 into a club meeting to seek
>help in programming it.

I know what you're talking about -- and I'll concede up front that a lot of these technically-inept OT's are 20 WPM Extras to boot! However, I have always strove to keep up with the times as far as basic technical knowledge is concerned -- and not just the bare minimum required to keep beeping or yakking. I have always been involved in digital modes, for instance, and now use them more than CW! I have been my club's "Digital Mode Captain" for the past four Field Days, and will try to pass that job over to some newcomer next year, if only I could find one willing to open some books and turn some pages to learn everything I have -- instead of being "Elmered" with "hands on" training which only gives them the basic operational procedure and none of the background.

>I'm not talking about relative newcomers
>either, I'm talking about guys who were hams before I was even born.

Yup, I know. They're a real problem, all right. Usually the leaders of the "Don't PL our repeater" pack of whiners.

>Furthermore, sometimes it's a no-code Tech who picks up the
>old-timer's HT and shows him how to program it.

Sometimes, but certainly not often enough. The No-Code Techs are at the top of the list of the technically inept, in spite of their protests to the contrary.

>Never mind that the
>HT's owner could have learned this for himself by reading the manual,
>because many manufactuers' manuals leave a lot to be desired, and
>we're talking about guys who once built microphones out of tuna fish
>cans and can do 40WPM or better in their sleep.

Quite frankly, the tuna fish-can mics didn't sound that great, and the 40 WPM in their sleep would have sounded a lot better if they had used 25 WPM while wide awake.

>How are we supposed to
>be dumbed down if guys who have been extras since Moby Dick was a
>minnow need help from another ham to get a new piece of equipment
>operating? And how are we supposed to be dumbed down when it turns out
>to be a guy with a license the ink isn't even dry on yet that is able
>to provide that assistance, and is happy to do so? I'm not buying the
>dumbed-down theory one bit.

This has always been the case, John -- I was one of the "technical nerds" when I was a newcomer ham as well -- much to the dismay of the OT's in my first club. And I don't claim to be a technical genius or anything like it -- I have strictly "amateur" technical skills. I am, however, technically self-sufficient as far as my own station set-up and operation is concerned, and I have enough know-how to maintain our club's repeaters, do all our computer logging for Field Day and other contests, etc. etc.

I don't disagree with you whatsoever about the technical abilities of hams past or present. However, I don't assign that technical inability to knowledge of the Morse code, either. The two are not related, no matter how hard the no-coders struggle to make that very same connection in their arguments.

>>After that, the next bone of contention will be whether or not a prospective
>>ham should be required to know how to spell his name correctly on the
>>application!
>
>If he can't, he gets a license that doesn't have his name on it and is
>therefore invalid, doesn't he?

Dang it, John, you got it first time! You're a real fart smeller! Er, I mean,

smart feller!

>BTW, Larry, you were supposed to look me up when you came up this way,
>I still owe you a roast beef from a bet we made several years ago and
>you haven't even bothered to collect your winnings.

My apologies. I don't even remember the bet. I guess my brain is too full of Morse code knowledge to retain such things, eh? Please refresh

my memory!

That amazed me too - but there's only one insulator on the pole pig
and one wire crossing the street to same. Three phase primary is
three wire, so there isn't even a Wye Neutral for return.

I first saw this system along the Trans-Canada highway in Alberta in
1970 and I put it down to the rural-ness of the area. But suburban
Portland in the 21st Century?

Back in 1994 I lived in Oregon for a year. The written driver's test at the DMV was done with a computer with touch screen. I knew how many questions I got wrong, but lost track of how many more I had to complete during the test. Then it told me that I passed and my score, around 92%.

Paper tests generated just before the VE session via computer would be cheaper and easier than dedicated hardware like that DMV had anyway.

New privileges if the code requirement is dropped, as mentioned in the
thread in the past, and the basic tone of the thread in the first place.

>
> > but the dropping of morse code completely is not going to

Overall, from what I have seen listed in the N2EY postings, we average about
10,000 new licensees per month on average. There may be an inrush at first,
but for the most part I think it will still flatten back out to the average
10,000 per month growth. That is of course if nothing is done in regards to
promotion outside of the ham ranks more than is being done now.

I imagine, (IMHO) that some may elect to use them, some may not. My crystal ball is a little fuzzy on this one. I know it will be a few years before I could, regardless of what happens.

And those type of remarks, except in a few certain cases, yield no positive results either, except in the mind of the one making the remarks.

Even if you are not an ARRL member and/or disagree with its policy, you should seriously consider contributing to this fund. If the BPL technology ever gets implemented, this may very well be the end of ham radio as we know it. Make no mistake about it - we're talking 60 dB noise increase across the entire HF, not dropping the Morse requirement! And for what? So that people in the rural areas of USA can have a faster download from porn sites?

https://www.arrl.org/forms/development/donations/bpl/

A measly $25 - $100 can help prevent your $5000 equipment from becoming an expensive coffee cup warmer.

Since the RSGB has already destroyed ham radio in the UK - it's little more
than multi-band CB now - we feel there is little to be lost that hasn't
already
been sabotaged by our supposedly "National Radio Society".

So, roll-on BPL in this country - the sooner the better. The king is
dead...etc.

I hope you get mega-flamed for that last sentence. What a disgraceful
comment ! And what an appalling slur on the folks who live in rural
USA..... !!

Most of the FCC senior officials are lawyers who don't have a clue
about the technical side of radio. They wouldn't know a door knob
from a transistor. Come to think of it, a know lot of hams that
don't either.

Where did I state anything about renewing through the ARRL?
License renewal is FREE to any licensed amateur, you don't have to
belong to the ARRL or any other ham radio organization to renew
you license for FREE directly with the FCC.

This is one thing which has changed radically since I was a newbie.

Back in the bad old days, many if not most prospective hams started out with a shortwave rx, listening to other hams on the air. Most of us had many hours of SW listening experience before we ever took a license test. I and many others learned the code by listening to hams use it on the air - no tapes, no software packages, etc.

Starting out this way meant we already had some real hands-on experience in operating procedure, propagation, receiver operation and related subjects before we ever got on the air. We also had most of what was needed for a ham shack of that era - receiver, antenna, key, 'phones, and a desk or table to put it on. When the license test was passed, all that was left to do was add the transmitter and T/R system.

In my case, I built my first transmitter while waiting for the license to arrive.

From what I've read and seen, many newcomers today get the license first, then set about putting a station together. Some did it that way back when, too - and often they were the ones whose Novice licenses ran out before they were ready for the General test.

Cart before the horse, IMHO.

Last time I had to modify my license (change of address, late 1999), I had only
dialup access.

So I just downloaded Form 605 and instructions, read the instructions, printed
a copy of the 605, filled it out, stuck it in a stamped envelope addressed to
the FCC. New license showed up in the mail a week or two later. No special
software, no headaches.

Twenty minutes tops, start to finish.

Where is the NTIA in all this? They sure got their knickers in a twist about hams having broad access to 60M because of the potential interference to vital gummint HF comms from us. BPL is not the same kind of threat to the gummint itself than it is to us? Hams are not the only users of HF, in fact we're close to being bit players overall. What about the SWL's? All the gummint time & frequency standards stations? All the HF military comms we don't know about? The commercial PACTOR users?

Question for Phil: At what point can opponents of BPL take it out of the hands of the FCC and into the Federal courts? I'm thinking in terms of the ARRL taking it to the wall and laying on the expert witnesses Powell Jr. can't brush off like he can at this stage.

It's not just stupid people - tho' there are enough of them around. In
your cited case, the techno-weenies that designed the cash register
accounting system have made things both too simple and too complicated.
So every time there is a special, or if a mistake is made, then all h**l
breaks loose.

The weenies who put those systems together have made it unnecessary to
think most of the time. So a mistake comes along, and the person behind
the register has to use a muscle they may not have excercised in weeks -
their mind.

Last time I had to modify my license (change of address, late 1999), I had only dialup access. So I just downloaded Form 605 and instructions, read the instructions, printed a copy of the 605, filled it out, stuck it in a stamped envelope addressed to the FCC. New license showed up in the mail a week or two later. No special software, no headaches. Twenty minutes tops, start to finish.

Good idea. I should have done that and saved the headache. Good news is -- I received my license in the mail a few days ago, so I have ten years to think about how I want to do it next time. :-))

I just renewed earlier this year. As an ARRL
member I received a nice reminder notice and all I needed
to do was sign it and send it back to ARRL.

I believe I could also have done it "online" via ARRL, but
it'd probably take more time than it did to sign the
ARRL tear-off form and mail it back.

Took 2 minutes at most. :-)

Cheers,
Bill K2UNK

WRONG...

NCI still has the individual administration decisions to address...
and for the uninformed... NCI's charter does NOT address
written testing. If anyone is going to propose a "No Test
International" they'll not get my support nor (IMHO) the support
of any other NCI directors.

Cheers,
Bill K2UNK
Director NCI

That isn't necessarily final, of course. It is theoretically possible for the Supremes to rule contrary to the framers intent. Some justices seem eager to do so.

So the question merely changes to whether we should seize the airwaves, as the Constitution provides, and then defend the Constitution from "all enemies, foreign and domestic", by taking out the supremes. Anyone? Anyone?

Because your transmissions travel on a "public thoroughfare", there is a
requirement to ensure that you have demonstrated the knowledge to
operate without negative impact on the other users of that resource,
sort of like you need a drivers license to operate a motor vehicle on
public highways.

Why limit band privs? Just limit power based upon safety reasons.

> How about this: Three classes of license - call them Third, Second and
> First for discussion's sake.

How about two?

> Thirds have a simple written test and get to use a few modes (CW,
> SSB/FM phone, some data) on parts of all bands.

On all parts of all bands.

Power limit is below
> that requiring RF survey. Callsigns are six characters, and Thirds
> can't be repeater control ops or VEs.

Fair enuf. But call it "limited."

> Seconds have more modes, more space on the bands, and more power.
> Callsigns are five or six characters. Seconds can be repeater control
> ops and VEs. One year experience as a Third required.

Superfluous license class.

> Firsts have all privs, callsigns with four, five or six characters,
> etc. One year experience as a Second required.

Two years as "limited" required.

> You get the general idea.

Yup.

> > 1. FCC remains under a congressional mandate to simplify regulations.
> > The easiest system for FCC to administer would be exactly what I have
> > outlined - either you have HF privileges or you don't.
>
> But is that what's best for the ARS? I don't think so.

Two licenses are simple enough. All band/mode privs for both, with
the distinctions being power, ability to operate automated or remote
transmitters, and VE positions.

Personally, I'd like to see the FCC write TOWER priveleges into the
license as well.

About 150 or so by my count :-)

Ironically, as commented elsewhere by Phil Karn,
the USA treaty approval process may resut in the
USA being one of the last to actually change.

> BTW, apparently the Swiss no-coders are HB3 calls, a new one for WPX

So it appears.

Cheers,
Bill K2UNK

Right. The ARS is simply not for everyone. People who try to make it
that way are just spinning their wheels. You need a technical bent, and
getting a thrill out of sending a teeny signal across the world helps too.

>

I am an Extra lite, I was a No-Code Tech at one time. I'm also a hockey puck and a few other things.

Seriously, there isn't anyone around that someone doesn't like, so we just have to work on being less sensitive.

I was sitting around a dinner table with some friend hams, and the conversation shifted to licensing. One of the guys noted how "Any moron can become an Extra now." I just chuckled and said, "and I am the proof of that!" He was a bit embarrassed, but I took no offense and made a joke of it.

Radio Amateur KC2HMZ is simply wrong here. And old mister No kids, no lids is just the exception that proves the rule.

Most all hams, even those who think that elimination of the Morse code requirement is the beginning of the end of Western civilization, are very welcoming of new people.

Sometimes when we think everyone around us is nasty, we need to look to ourselves for the problem.

Eventually, that's all you can do, if the person insists on being nasty. It's also important to remember that that same peron will probably spend time moaning about "those rotten hams".

> Tower, Inc_, 13 F 3d 994 (6th Cir. 1994). Save yourself the trouble
> of having thr case removed from whatever court you intend to file in
> to the FCC.

Civil lawsuits are not covered by federal FCC regulations. If the utility
corporation has a federal EPA license to distribute a chemical that
doesn't mean if they spill their toxic waste on my front yard that I can't
sue them in State or Federal court.
FCC can enforce interference laws, but the courts can address torts
involved with that interference. I can also sue if someone jumps on
their radio to jam my transmissions and the FCC can enforce their regulations.
The ARRL likes to pass around that lawsuit to attempt to fool home owners
to think they can not sue a radio operator(s) for a tort if there improperly
operated station causes interference, danger and hardship to a home owner and
the occupants. Using your logic if a radio operator improperly installs a
radio tower and it falls the victims of that act can not sue the radio operator.
The tobacco litigation has opened up a whole new world of civil law as
McDonald's and Nabisco are now finding out.

A tort is a private or civil wrong or injury (other than breach of contract) for
which a court of law may provide a remedy through a lawsuit for damages
(compensation). When a person violates his/her duty to others created under
general (or statutory) law, a tort has been committed.

The four elements present in a typical tort lawsuit are:

(1) The existence of a legal duty owed by a person to others

(2) The breach of the duty by one person (negligence)

(3) The breach of the duty being the "proximate cause" of damages suffered by a person

(4) Damages incurred by a person.

Each of the four elements of a tort typically must be present to be compensated.

> will conquer the HF bands.

I said it a few years ago, and I'll say it again. Every ham who wants to be on HF is already there.

The number of new hams who actually show up on HF when the Morse examination requirement is removed (as opposed to showing up as an upgrade on www.qrz.com) will be negligible.

With all kind wishes,

If that is what floats your boat, knock yourself out, but those
who choose not to play the ham radio game the same way you do does
not mean they are any less of a ham, except to your "I am
superior" way of thinking. Why don't you operate all the modes,
too lazy?

> And
> you know something totally strange? My Morse/CW proficiency doesn't

>

And you know something even more strange? For many hams, not being
as proficient as you claim to be in CW, and/or not operating in
that mode does not interfere one little bit with their enjoyment
of other modes either, and that includes myself.

559. So what do we call them?

But--- did you listen carefully for any very weak signals on CW? Often that is the clue to what's happening, or about to happen, on an otherwise seemingly dead band.
Sometimes when you tune around carefully, listening for any hint of signals, you'll start something - you hear a very weak one, peak him up with your receiver filtering, whatever you have to work with, listen long enough to ID him and where he's located. If he signs off with the station he's working, and you've tuned up, you give him a call. If he's copying as well as you, he answers and suddenly you've turned a dead band into a QSO. More often than not, others will hear you two in QSO and next thing you know they're either calling in tailending you, or calling CQ nearby and drumming up their own contact. When you next tune around, there'll be several QSO's going on on the "dead" band.

This scene plays out far more often than you would think, or used to back when HF experienced hams were the norm rather than the exception. Sure is worth trying, anyway.

Dick

OOPS! Maybe this is the move that's on.....If unlicensed stations and entities are afforded no interference protection, then CB is unprotected. Eliminating licensing from ham radio would also eliminate any and all interference protection!

Right on!

Well said indeed, but what if enough people just reject that logic?
What if it is decided that the licenses just need to be bought? Say 200
bucks a shot? Or maybe a yearly sort of thing. Why have any other
qualifications for the license?

Here we go. Glad you brought the spectrum argument into the equation. Perhaps Hams and anyone who want to be a ham should have to pay for the spectrum we want. That would be what qualifies for becoming a ham.

>
> Cheers,
> Bill K2UNK
> Director NCI

Bill is exactly correct ... NCI is NOT "No Test International" ... we have
NO
intention of trying to weaken or eliminate the written tests ... ONLY to
eliminate
the Morse test requirement.

Now that that's gone from the ITU Radio Regulations (effective July 5, 2003,
the day after the WRC closed), administrations are free to drop Morse
testing.
(see http://www.nocode.org/Articles.html for the changes to S25.5 and the
entire text of the new Article 25 ... the amateur part of the ITU Radio
Regs)

Word is that a number of administrations intend to move promptly
(surprisingly
promptly for governments ...) to eliminate Morse testing from their national
rules.

NCI's work is not done just because the ITU requirement has been eliminated.
We will continue to work with administrations around the world to get the

Morse
test dropped from national regulations.

Here's a question. Forgive me if it appears trollish, but I gotta ask.

Is there any individual or dept. within the FCC that folks can send e-mails to in support of retaining the 5-wpm exam? Or, for instance, all Techs would automatically get Novice/Tech+ privies while Element 1 is retained for General and Extra?

Or is it a forgone conclusion that the FCC WILL drop Element 1 despite any volume of sentiments to the contrary?

> Context: Your reply clearly referred to a quoted reply which talked about
> renewals VIA the ARRL.

Context: The initial post to this thread was from someone who went
to the FCC site to renew and commented about how long it took. He
made no mention of the ARRL. Then w4nti made his comment about
joining the ARRL so renewal would then be free (I guess the
payment to join ARRL doesn't count). My comment was that license
renewal was free and ARRL membership was not necessary. In other
words, why waste money on the ARRL to have the advantage of "FREE"
license renewal, when one can do it FREE without the ARRL.

Pay who? Where is the owner?

Milton Friedman, in his work "Free to Choose", would argue that this is a case, like the case of "clean air", which could properly be assigned to government: there is a clear public interest in conserving this resource, but no clear way to allocate costs.

He would probably propose a consumption tax, based on bandwidth, power, duty cycle, etc., which automatically allocates bandwidth (in the long run) according to its most profitable use: if the people badly want a service which consumes piles of bandwidth over a vast area for most of the time, then they would pay enough to offset the immense consumption tax on the provider.

Of course, the effect is that hams will all start using CW. C'mon! You can pay tax on 150 Hz, or pay over 20 times as much for SSB. CW wins, hands down.

Len.

> > > be interesting.

Actually, despite the fact that the word "Test" doesn't appear in NCI's
formal
name, that is clearly the intent ... no CODE test ... NOT "no test, period,"
or
anything to do with eliminating or gutting the written tests (as Bill Sohl
and I have
both stated many times in this venue ...)

If I inadvertently screwed up the attributions in snipping Dick Carroll's
remark,
I apologize ....

The interesting thing is that NONE of the adminstrations listed above had
ANY objection to the changes enacted at the WRC to eliminate the ITU
requirement for Morse testing. We expect that most administrations will
act reasonably promptly (Switzerland has already, the UK, Belgium, the
Netherlands and others are expected to follow suit soon) to allow HF
access to licensees who have met reasonable written test requirements
but have not taken a code test. (In CEPT, the only difference between
Class 1 and Class 2 is the Morse test ... the writtens are the same, based
on the "HAREC" recommendation.)

Russia may retain code testing for a while ...

The German administration has already publicy stated its policy will be to
eliminate Morse testing (despite much hand-wringing and whining from DARC).

China proper (PRC), I'm not sure of, but Hong Kong (which is sort of
separate,

despite its return to the PRC) has expressed interest in modernizing its rules to
drop code testing.

The Arab states are very interested in modernizing communications of all forms ... it will be interesting to see what approach they take.

To see the before/after of S25.5 (the part of Article 25 of the ITU Radio Regs
that formerly specified an ITU requirement for Morse testing) or even the entire
new version of Article 25 (some other modernizing changes were made in addition to the elimination of an international requirement for Morse testing),
see:

> Or is it a forgone conclusion that the FCC WILL drop Element 1 despite any
> volume of sentiments to the contrary?

Bert,

Back a few years ago, when the FCC issued its Report and Order
"restructuring" the ARS, the ONLY reason they gave for keeping
ANY Morse testing at that time was the requirement in S25.5 of
the ITU Radio Regs.

Now that that is gone, all of the countries of the world are free to
drop Morse testing from their national rules.

While I think it's a fairly good bet that the FCC WILL drop Morse
testing, frankly, I don't see the FCC acting on this in any sort of
"automatic"
or "self-initiated" way ... the status quo is 5 wpm for General and
Extra.

And, since there is currently no petition or open docket item at the FCC
proposing to make any such changes, letters and e-mails would, at this
point,
most likely be considered an unwarranted annoyance by the FCC staffers
who would have to deal with them. (and no matter what our respective
views on code/no-code, I don't think that ANY of us want the ARS
to be viewed as being a thorn in the FCC's side ...)

I remember a few years back when the ARRL got the amateur community
all fired up over "little LEOs trying to take the 2m band" ... the result
was
a firestorm of e-mails to the FCC that overloaded their servers and cause
them great difficulty in conducting normal business ... something that they
DEFINITELY did NOT appreciate!

I'm sure that the amateur community will get notice when this question finally does come up at the FCC ... THAT will be the time to comment (when they ASK for comments). In the meantime, a major mail/e-mail "blitz" on the FCC will almost certainly harm the standing of the ARS as a whole at the FCC.

73,

I'd like to see what the CEPT do at the end of this month in their meeting. At present they have two classes : Class 1 (full privileges, requires full theory test and 5wpm, recently reduced from 12wpm) and Class 2 (144 MHz +, reduced theory requirement, no code).

It is not clear why Class 2 operators must stay above 144 MHz, as WARC '79 changed the lower limit for no-coders to 30 MHz, but I guess it is because of countries who had not implemented that at the time the areement was originally written.

They could merge Class 1 and Class 2, but as there is supposed to be a difference in theory level, they may not. If they do merge them, as some rumours are suggesting, then Class 2s (such as both types of US Technician) would have full privileges including full HF access in every CEPT treaty country they visit.

Clearly, though, the CEPT are going to abolish the code requirement for Class 1, whether or not they merge it with Class 2 or reduce the lower frequency for Class 2, and this will come about a month after when the ITU introduced the new s25 rules.

This will have enourmous impact. All of a sudden, no-coders from all sorts of countries will be able to operate HF in other countries, if maybe not immediately in their own. Don't forget, in many countries no-coders have to take the full theory, so those will become Class 1 even if Techs are still Class 2!

So many countries belong to the CEPT agreement that it will place a huge amount of pressure on individual countries to abolish code testing more quickly. In the interim, lots of no-coders would be able to operate HF only by going mobile and driving across a border!

I agree there are a few like that, Kim, but in 35+ years I've only
encountered a few of them. Maybe there are more where you are. There

are certainly more here on rrap than I've encountered in the general
ARS population.

I would also say that your description could be applied to many
different induhviduals, on all sides of the various debates.
>
> I believe that CW testing has promulgated such behavior as above.

How? It's just a basic test of a simple skill.

> It is a
> "governmental approval" for a specific mode, thereby warranting that anyone

If that's true, then the same can be said of the written tests. And
vanity callsigns. Or any other accomplishment by an individual.
>
> Over time, the CW testing has (by many hams) been a filtering device to keep
> their ideas of "no gooders" out of the hobby--promoting a "good 'ol boy"
> concept.

Maybe where you are. Not around here, or anywhere else I've lived.

Some would describe the code test as an "ante" - an initial
investment, so to speak.

> This is attitude is horrendous in a "goodwill" hobby, and displays
> of it are terribly disturbing to me. As amateur radio operators we are
> ambassadors of the United States. And, to get so petty as to some of the
> arguments spoken in this newsgroup, and even more comments I hear on the
> air, it makes me totally embarrassed to even bring the hobby of ham radio up
> to anyone any more.

I don't hear the sort of argument you describe on the air here in EPA,
Kim. In fact, from what I see and hear, the whole code-test thing
seems to be pretty well confined to rrap and a few other outlets.
Maybe where you are it's different, but among the hams I know, putting
someone or a whole group down because of their license class is simply
Not Acceptable Behavior.

> Now, all that given, I respect the tradition of CW.

That's good. But it's more than a tradition - it's a very popular mode
in the ARS today. Second only to SSB on the amateur HF bands. I would
not be surprised if this year it turned out that CW was #1 in total
QSOs during FD.

> Contrary to such people
> as Dick Carroll and Larry Roll, who go off half-cocked thinking they "know"
> who someone is based on their dislike of the mode of CW, most of we who are
> new to the hobby are quite respectful of the tradition of ham radio, and
> know good talent on CW when we see it--indeed even love to watch someone
> doing it.

Many if not most newcomers are as you describe. But a growing number are not - in fact, there are some who consider it a put-down even to be called newcomers.

> Yes, I want CW to stay as a testing element and I think 5wpm is sufficient.

Excellent! But I'm afraid neither you nor I will get our druthers on this. (I'd be happy with 13 and 20 wpm code tests, actually. 5 wpm was an FCC mistake, made more than 50 years ago).

> I also think it should be sending OR receiving (not both), and I think that
> waivers should only be given upon the agreement of 2 doctors that a certain
> handicap is, indeed, the complaint of any particular individual.

I think both sending and receiving should be tested (the two reinforce each other).

Medical waivers were simply a quick way for FCC to please Papa Bush and a now-dead King* he wanted to grant a favor. Their implementation was very poor - any MD or DO could write a waiver, regardless of specialty or experience. But speech and language pathologists, occupational therapists, audiologists and other professionals with far more specialized knowledge and experience in disabilities had no standing at all. That makes absolutely no sense and shows that the FCC was simply looking for a quickie solution to a problem.

Again,I'm afraid neither you nor I will get our druthers on this.

> Heck,
> maybe the Federal Gov't. could even come up with approved doctors--they
> approve VEs, right?

Not gonna happen. The VECs approve the VEs, and the FCC oversees the process.

Last thing FCC wants is more admin work, which is exactly what any sort of waiver system generates.

Reducing routine admin work is a key FCC goal. That's why all the emphasis on reduced testing, fewer tests and license classes, online renewals and modifications, 10 year licenses, etc. It's the whole reason behind the VEC and QPC systems: Get unpaid volunteers to do the work and provide the services and facilities formerly performed by paid govt. personnel. Brilliant, actually.

That's why the smart money approaches FCC with ready-made ideas, at the right time.

> I hear too many stories of hams who have no business
> being any class of ham where CW was required--because they DON'T know CW.

I'm not sure what you mean.

Do you know hams who have forgotten the code? So do I. I also know folks who have forgotten all sorts of things they once had to know to pass various tests, but they don't get their highschool diplomas

pinched for it.
>
> People such as those mentioned earlier here are reprehensible in their
> opinion (in *my* opinion <GRIN>), and it is their behavior that does more to
> harm ham radio than the choices others make NOT to learn CW or who choose
> not to use CW once they've passed and exam requirement.

Agreed - and folks like that exist on all sides of the codetest
debate. Do we really want someone who writes things like "those in the
minority should learn to take 'No' for an answer and get on with
life"? (It wasn't a pro-code-test person who wrote that).

> I am happy to have
> *anyone* in the hobby--even those with not-so-great-operating practices, as
> long as they are friendly, promote ham radio as a positive experience, and
> encourage others to simply JOIN, not to GET TO EXTRA.

I'm happy to have anyone who follows the rules, pulls their own
weight, exhibits a positive attitude towards others, and seeks to
learn and grow.

What gets forgotten too often is that the license test is just the
beginning.

Isn't that putting a lot of faith in the quality of the ground? I still remember
years ago when I serviced a repeater out in the national forest that appeared to be working normally until some remote user keyed it up while I had my VM probes in the AC socket- the primary voltage suddenly dropped from 118 to about 50 volts.

It was instantly obvious what was wrong- the neutral return was open and the keydown load on the AC now found the series resistance of the ground return-actually earth now- was such that it dropped the primary voltage that much. And the pole pig was only a few feet away.

I gotta wonder how in the world a utilitly could reliably use earth for a return
when they have no idea what load the consumer will place on it. I've never seen earth with resistance as low as copper! :^)

Eggsactly! We don't have any idea what's going on behind the scenes, but
if NTIA is no more on the ball than they were in the 60 meter case it may well
be NOTHING! recall they said not a word until well past the comments and reply
comments time, then sent a letter of opposition to FCC. You suppose they're as
asleep again, or worse will wake up to find DC-80mhz QRM a done deal?

I really doubt it. Somebody, somewhere will surely clue Powell etc in before tea time. Otherwise it's egg-on-face time, bigtime.

That surely wouldn't set well, a suit showing where and how FCC abrogated it's statutory responsibility if favor of the$$$$$ set.

And that 's the problem in a nutshell nowdays, Mike - Based on license it's impossible to say with any degree of
certanty that one isn't! Based on the required and demonstrated knowledge and ability level demanded of the testing
today, it's simply not possible to say with any certainty that the new licensee knows anything about the subject
matter, nor is competent to handle radiotelegraphy at effective communications speeds.

FCC might as well gone ahead and did away with license classes, they mean nothing anymore.

No more than I have against someone who chooses to do satellite work,
while I have to test for it.

Rf Safety is required to be calculated for by people when they run over
a certain power. Why should someone who never intends to work over 50
watts have to test for RF safety?

If someone never intends to homebrew, why should they test on any
equations.

Sounds like we should maybe make up our own tests.

I've done some homework on this. There are something like 4,800 Swiss hams, about half and half Class 1 (HB9+2 letters) and Class 2 (HB9+3 letters), excepting only about 70 or 80 (!) Class 3 (HB3). I thought at first that we would hear a new prefix, but the few HB3s will continue to have only 2m/70cm. In fact there are about a couple of thousand Class 2 Swiss no-coders now unleashed on HF with longer HB9 + 3 letter calls.

Switzerland is only the beginning. In a couple of weeks time you can look forward to hearing UK no-coders on HF with G1, G6, G7, G8 and M1 calls. Those are just the ones with full privileges. There will be 2E1s with Intermediate licences to join the existing 2E0s as well (there are at least four times as many 2E1s as there are 2E0s). There are probably about 40,000 UK no-coders.

And it won't stop there.

Ham brains only respond to freqs, they do not do well with channel
tags. Like on 2M. "The .360 machine". "the .195 machine", etc.

Bert, as I see it the basic facts are these:

1)The FCC won't respond to anything filed before congress has ratified the new treaty (no point approaching congress, though, as that part will be a rubber stamp excercise);

2)Everyone and his dog will then file petitions to restructure the Amateur service. You could file one too;

3)This will be followed by requests for comments, and you could then file yours too.

The bottom line is yes, there's still plenty of recourse, but not yet, and very little chance they won't dump element 1 completely anyway (see the previous poster's explanation).

If you want to petition for all Techs getting Tech+ privileges, or file a comment to that effect, that may be worthwhile, all the same.

Are there NO other wires on the pole?

Here in EPA, most residential areas have three-phase going down the
larger streets (like South Devon Ave. here in Wayne), with
single-phase feeders going to the side streets. The return is partly
through the dirt but mostly through the main messenger that carries
the 120/240 twisted wires.

Earth return will work fine, if the ground is good enough. The few
HVDC lines that have been installed can be operated that way if one
conductor fails.

Waiting for the right moment. Or totally oblivious.

> They sure got their knickers in a twist
> about hams having broad access to 60M because of the potential
> interference to vital gummint HF comms from us.

Right - but they waited until AFTER all the comments were in and it
looked like FCC was gonna give us 150 kHz and full power. THEN they
spoke up, directly to FCC.

Prolly same thing going on now. If FCC stops BPL because of the work
of ARRL, IEEE and others, NTIA doesn't have to lift a finger.

> BPL is not the same
> kind of threat to the gummint itself than it is to us?

NTIA isn't going to admit that sort of thing right out in public
unless they have to.

> Hams are not
> the only users of HF, in fact we're close to being bit players
> overall. What about the SWL's? All the gummint time & frequency
> standards stations? All the HF military comms we don't know about? The
> commercial PACTOR users?

Some of them are commenting. The IEEE Power Relaying committee did a
really good comment that recognized the need to protect hams and
others from BPL. There are also interesting safety and electrical
noise issues as well. Example: The access BPL systems use a bypass
filter to allow the signals to go around the pole pig, which is very
lossy at RF. What if the bypass filter develops a short, and tries to
put several KVs to ground through YOUR meter service? What about
electrical noise (besides the BPL signals) on the primary side getting
fed to the secondary side?
>
> Question for Phil: At what point can opponents of BPL take it out of

I'd say that sort of thing is a really, really, REALLY good way to get
the FCC seriously pissed off at the BPL opponents (personally) and the
ARS in general. Even if such a case actually got to court, it would
have a one-in-a-google chance of winning. And if it was actually won,
FCC could make life VERY difficult for the winners, or the winners'
service, in a zillion different little ways.

Trying to "go over the FCC's head" is a last-ditch
nothing-left-to-lose desperation move, I think.

Correct me if I'm wrong, Phil.

60db is a very high figure. Where does this figure come from.
If this is correct wouldn't the VOA,BBC and others nations
broadcasts be shut out from America? Something is odd here,
I can't believe that the FCC would intentionally jam all HF
frequencies from citizen useage.
If the 60db figure is an exageration to get funds then the
augument is lost before it starts !
Even if it is correct Ham Radio could not do anything about
it because its members have shown little interest in
perpetuating the hobby with actual deeds.

>

Correct!
You do know I'm being a devil's advocate here?

Or better said, I really believe that an prospective amateur should get
as much education as possible. Removing the Morse code requirement,
while celebrated by some hams and prospective hams, is not a good
thing. They who celebrate this are celebrating advancement of ignorance.

>60db is a very high figure. Where does this figure come from.

Visit www.arrl.org, take a look at their hot-news article on BPL near the top of the page, follow the link to the full story, and then look for the link which lets you download the ARRL's 121-page response to the FCC inquiry directly from the FCC's web site.

The ARRL response contains a bunch of the studies that the ARRL did. Some of them are based on standard sorts of theoretical calculations (e.g. NEC2 modelling of power lines as antennas, combined with data on the probable spectral density of BPL signals, with power levels assumed to be at or near the FCC's current Part 15 emissions limits).

If I recall correctly, the response also cites a number of studies of BPL systems which have been performed overseas. These studies showed that serious problems do exist.

>If this is correct wouldn't the VOA,BBC and others nations
>broadcasts be shut out from America?

It seems likely.

> Something is odd here,
>I can't believe that the FCC would intentionally jam all HF
>frequencies from citizen useage.

When money is involved, government bodies have been known to do some very strange things.

It has also become apparent that some very senior FCC officials are woefully ignorant about radio. Political appointees, I suppose.

>If the 60db figure is an exageration to get funds then the
>augument is lost before it starts !

So, go read the studies and decide for yourself. The ARRL has had citations for the overseas studies, and preliminary versions of their own sets of calculations, on-line on their Web site for many weeks.

The ARRL pages point out that previous studies in Japan had led the Japanese government to a similar set of conclusions about the interference potential, and that the Japanese government has concluded that BPL technologies of the sort being discussed _cannot_ be put into

production in Japan because of this unacceptable interference potential.

>Even if it is correct Ham Radio could not do anything about
>it because its members have shown little interest in
>perpetuating the hobby with actual deeds.

Feh. Looks to me as if well over 1000 individual Ham operators took the time to write down their responses to the FCC's NOI and post them on the FCC web site (this isn't counting the numerous duplicate uploads, which I suspect occurred because the FCC's upload server appears to be running on a Commodore 64-grade system and had a nasty tendency to hang during the upload/confirm process).

I spent 3-4 hours crafting my own comments on Saturday, and uploaded them successfully on Monday morning.

When the FCC takes that position then I'll fight
against it. For now, that's just empty speculation.
I have long sgo stated my opposition to any
elimination of written testing...and, have made
suggestions to the VCCs on ways to improve
written testing.

Cheers,

And even if congress failed to ratify it would change nothing
in the ITU treaty. In fact, if congress doesn't
ratify, then the USA would simply NOT be a participant
in the treaty. The former treaty is, as of 7/5/03, null and void.

> 2)Everyone and his dog will then file petitions to restructure the Amateur
> service. You could file one too;

Maybe. Time will tell.

> 3)This will be followed by requests for comments, and you could then file
> yours too.

Not necessarily. Since the FCC already stated (in R&O 98-143)
that code was only retained because of the S25.5 requirement, it is possible
for the FCC to just drop Element 1 altogether based solely on
prior consideration.

> The bottom line is yes, there's still plenty of recourse, but not yet, and
> very little chance they won't dump element 1 completely anyway (see the
> previous poster's explanation).

Agree.

That'd be fine with me. I am also in ARRL and have held a
field assignment position (LGL) for several years. I have
repeatedly stated I did not see NCI trying to expand
beyond NCI's core objectives nor do anything else to
try and replicate ARRL functions.

Then your phone line has issues. The only way that could take 4 hours is if the download takes at least three, which means that your effective baud rate was just about 2,400.

All we have is their 2000 year comments on the issue. If you want to keep it
(say for the Extra class, but drop it for General), then you should file a
petition for rulemaking....

Uhhh, this one is even better than Christian Science. What about all the government, military, ship to shore, and navigational use of the HF spectrum? Do you think that the FCC is actually going to allow malicious interference to disrupt these services?

Whether the ARRL is involved or not, and if the statement concerning noise is true, it will never happen.

Save your BPL money and take your girl friend out for a Prime Rib dinner and a night on the town......You'll get a hell of a lot more bang for your buck.

Another angle is to ask "What does the FCC get for requiring element 1
for generals and
extras?" No other American service uses code anymore. The FCC isn't
in the business
of awarding gold stars.

That's because our rigs display frequencies. CBers talk about channel
numbers, TV
watchers talk about channels and so on. But broadcast AM radio talks about
frequencies, as listeners' radios are marked with frequencies (often
incorrectly as
54 to 160 KHz). The FCC talks about FM radio channel numbers, but the
public
only knows about frequencies, as that is how most all radios are marked.

It does make for some awkwardness. My own introduction to the ARS came because I thought it might be nice to make use of the local autopatch in support of one of my other hobbies, 4 wheeling. My wife is reasonable about my getting stuck in the woods and having to dig myself out, but she kinda likes to know about the delay.

So I got the tech license, and then joined the local club. The guys and gals were great, and invited me to the local shack for a contest, and bam, the rest is history.

So I had an unorthodox beginning in the hobby, and my licensing level outraced my operating ability for some time. So it's just my experience that makes me think about the mandatory wait period being a good thing.

Its the new ARRL policy. In the past they tried to get you to give them your money based on shear blind loyalty. Now'a'days they want to scare you into giving them the bucks. Its the old "If you cant coax them, scare the crap out of them" fundraising policy. The Catholic Church has used this for years and years.

Just think, when this Echo-link nonsense takes over (ala the ARRL's and their "Hinternet"), we'll all have $2000 CB radios.....I know I cant wait!

OK, fine. Then let's ALL not send any letters, emails, proposals or petitions
to the FCC about code testing from now on. We'll just wait until FCC initiates
something and asks for comments. Deal?

>I remember a few years back when the ARRL got the amateur community
>all fired up over "little LEOs trying to take the 2m band" ... the result

>
>I'm sure that the amateur community will get notice when this question
>finally does come up at the FCC ... THAT will be the time to comment
>(when they ASK for comments).

OK, fine. I promise not to bother FCC about the subject of code testing if everyone else promises not to bother FCC about the subject of code testing.

Does everyone agree?

>In the meantime, a major mail/e-mail
>"blitz" on the FCC will almost certainly harm the standing of the ARS
>as a whole at the FCC.

The thing to "blitz" the FCC about is Broadband over Power Line. They've only got about 1800 comments - and we have over 685,000 hams.

Did anyone besides me comment to the FCC about it?

Or should I have kept quiet, so as not to annoy FCC? The way the NOI was written, it seemed like BPL was the latest new golden technology. Sure seemed like FCC liked it a lot.

Actually, there is some use of Morse code by other services for auto-ID.

But even if no other service uses Morse code, hams DO use it. A lot. Which is a
valid reason to have it as a test subject.

If the FCC dumps Element 1 but makes no other changes to the rules, the only
folks to get any new privs will be Technicians who have not passed the code
test. They would get the same HF privileges as Novices and Techs who have
passed the code test.

Ironically, most of those privileges are for the use of code.

WHOA THERE!

The number of new ham licenses in the USA has been averaging about 2000 per
month for the past year or so, not 10,000. My posts in "ARS License Numbers"
show the current totals, not the number of new licenses.

Total growth in the 3 years and 3 months since restructuring has been about
10,000 hams.

>There may be an inrush at first,
>but for the most part I think it will still flatten back out to the average
>10,000 per month growth. That is of course if nothing is done in regards to

There's a big difference between the number of new hams and the amount of growth, because of expirations. Growth in the past 3+ years has been about 300 per month, not 10,000.

10,000 per month growth since restructuring would mean we'd be well over a million US hams by now.

>ball is a little fuzzy on this one. I know it will be a few years before I
>could, regardless of what happens.

Exactly the case for many folks. There are three reasons for folks in that situation to upgrade:

1) To nail down a vanity call that they want before somebody else gets it

2) To be able to be a VE or control op without having to worry about privs.

3) To have the license in hand so that when their situation changes, they can take advantage of it. Example: the ham living in an apartment with no HF setup may someday get a big raise and move to their dream shack. If they have the license in hand, they'll be able to use it immediately.

Back in the bad old days I got my Extra for a couple of reasons:

- I wanted all privileges
- it was there
- it was easier and cheaper to get the license than to build or buy a calibrator that could tell me where the subband edges were
- I figured that the requirements would just keep getting tougher, so the thing

to do was get it ASAP.

Whose PC Alun? One of the test sessions I was at had at least 30 people in it. Who is going to pay for those PC's? Will a VE have to supply his or her own PC for other people to use? Maybe have to buy several to allow everyone to test?

Man, that sucks. I suspected that might be the case. In the last place I lived, I had a nearby transformer that absolutely raised heck on the radio. However, someone else was obviously bothered by it also - someone shot it full of holes one evening. Anyway, if the normal devices can do that on their own, signals carried over or through those devices is almost certain to cause problems.

On the HF frequencies, any leakage is significant.

Exactly. That's what got me thinking about this in the first place. My
entire neighborhood is surrounded with power lines, some very high voltage
lines. While none are exactly next door, many are within sight.

> You can read the comments of others and leave

DSP filters can barely keep up with the noise that exists occasionally
now. If that increases, I don't think that is going to do that much.

But let's pretend...for academic discussion. Just what would you
expect the USA position to be with regard to the New vs Old ITU
treaty if the USA doesn't ratify? Remember, ratification, if at all,
is a USA function and the end result of ITU doesn't require
a follow-up ratification process from each administration.

Obviously the ability to submit petitions is a public right.
The point is that the FCC doesn't need a petition to make
changes.

Cheers,

Maybe, but IIRC the FCC, along with the FAA, FEMA etc. etc. operate extensive HF communications systems. It seems unlikely that a source of such serious potential interference to their own communications would be authorized?

Hansl:

Good idea. New rigs that include those freqs could have VFO settings marked with the "E1 - E-5" channel designations, to make it easier for the dumbed-down New Age No-Coders.

In a way, I do -- because their lack of desire to operate CW is usually
based on a lack of willingness to break their inertia and get down to
learning it. It's called laziness. Yup, that's right -- the "L" word.
L-A-Z-I-N-E-S-S. Hams who don't care or "don't want" to learn Morse code
are just plain old LAZY. Period. End of Story. Consider yourself to
have been grabbed by the collar and beaten with a club called The Truth!!!

|
| Are there NO other wires on the pole?
|
| Here in EPA, most residential areas have three-phase going down the
| larger streets (like South Devon Ave. here in Wayne), with
| single-phase feeders going to the side streets. The return is partly
| through the dirt but mostly through the main messenger that carries
| the 120/240 twisted wires.
|
| Earth return will work fine, if the ground is good enough. The few
| HVDC lines that have been installed can be operated that way if one
| conductor fails.
|
73 de Jim, N2EY
The problem is, in most parts of the country the ground conductivity
is VERY poor. Just ask anyone who is familiar with commercial AM
broadcast station operation. They all wouldn't bury literally MILES
of copper wire around their towers in order to get somewhat of a
ground if they didn't have to. Besides our local electric utility
had nothing but big problems with 3-phase feeder lines without a
neutral along with the hot lines. They lose transformers whenever we

have a dandy lightning storm.

As far as BPL is concerned, BIG PROBLEMS LOOM for almost all licensed services, including amateur radio if this is allowed.

73, Sam

Point taken. Maybe buy some cheap PCs from the Goodwill store and run Linux on them? Write something in a portable interpreted language like Tcl/Tk so it will run unchanged on Windows/MacOS/Linux/Unix. Hard to scale up for large sessions, though, isn't it.

Yes sir, guess my lack of desire to play golf can best be attributed
to a lack of willingness to break my inertia and get down
to learing it. Just my basic laziness I guess...nothing at all
involving there's any personal choice, like or dislike involved.

Same ole Larry :-)

Do you mean that the ITU treaty allows the retention of a code test if
the FCC decides
to? It says as much that it is now an option.

There is quite likely many new things in the new treaty that the USA
really wants and
the code thing for hams is likely at the very bottom of the list of
priorities. Most members
of congress are not likely to even know what ham radio is, much less
care about the
code requirement for hams......

We're not banning code. Some new hams will likely start playing it and
find it
easy to pick up, and become good at it. As long as there is interesting
DX to
be had on CW, hams will keep using it. "CW gets thru when nothing else
does,
and only needs the simplest of equipment".

So, the OP said he didn't want to _operate_ CW, but you then launched into
your spiel about him not wanting to take the test because he's lazy. He

probably doesn't want to take it, but I think you're missing the point,
and have been for years. And now it's all over bar the shouting.

KF6TPT: September 29, 2003

I think the FCC already decided this one, when they lowered the code test to 5 WPM, it was solely due to the treaty requirement. In effect, they've already sought, and received, plenty of commentary on the matter.

So once everyone in Washington is back from their vacations, they'll just axe Element 1, and leave restructuring the written tests to whomever is in charge after 2004. Michael Powell is rather busy these days, what with all the brouhaha surrounding ClearChannel and the media consolidation. If we think that he, or anyone all that high on the food chain at the FCC gives a rat's patootie about what's going on in Amateurland, we're fooling ourselves.

As far as I'm concerned, it should have happened years ago. I think the written tests should be harder, and I think you should re-test when you renew your license.

The case cited above involved suit for tort damages in state court,
removed to Federal court. The Federal appellate courts in several
circuits have found that in cases involving interference, The
Congress has granted the FCC EXCLUSIVE jurisdiction.

READ AND SHEPARDIZE THE BLOODY CASE.

Further I will not argue with an anonymous troll.

On 9 Jul 2003 06:07:34 -0700, Brian Kelly wrote:

>Question for Phil: At what point can opponents of BPL take it out of
>the hands of the FCC and into the Federal courts?

After the FCC hands down a ruling and the appellants can show that
the ruling will cause them harm.

The appellants must petition for reconsideration, and then take it
to the U S Court of Appeals for the District of Columbia, but they
will have to show that the Commission did something that was against
public policy or in violation of the Administrative Procedure Act.

If we lose there, we always have the option of petitioning the
Supreme Court of the United States to take the case, but because it
does not involve Contitutional or other high-profile issues, the
chances of them doing so are slim IMNSHO.

The biggest hurdle would be that the appellate courts are loath to
overturn an agency ruling based on facts within the agency's
expertise as long as there was an opportunity for public comment
(there was), there is a record in the proceedings (there is) and the
Commission's order makes reference to the record (I'm sure that it
will, especially to the stuff submitted by the internet and power
utility interests).

The last time that the League tried this route was when 220-222 MHz
was yanked away. We all know how that turned out.

The other way to fight this crap is via The Congress, as if they
know what the dickens it is all about other than "universal cheap
internet".

>Are there NO other wires on the pole?

I checked it out a lot closer - there appears to be a neutral wire
running quite a distance below the primaries but above the cable and
telco stuff. It looked a lot like a messenger or guy wire, but it is
most probably serves as the neutral of a Wye primary.

>Earth return will work fine, if the ground is good enough.

The rocks of western Oregon do not fall into that category.....

Don't know about the emails, but you can send a letter to the commisioner or others in the FCC. I am sure a mailing address would be listed somewhere on their website, as well as maybe even the email addy's you mentioned.

Also, write a letter or email to you senators and congresspersons, as well as other ones not necessarily in your district. You would be pleasantly surprised as to what has been achieved by others over the years as far as concerns and interests, and this without a "big-brotherish, mafioso-like" organization taking your money and not showing where it goes but saying they are there to support you.

I currently write (or bug) my governmental representatives on somewhat of a regular basis. Hell, they may actually learn something as well. (both amateur radio related and other concerns as well.)

I still think that if morse code is so important for the hams to have to know how to do, then all others utlizing public service and business band frequencies should have to know it as well such as law enforcement, fire, ems, governmental entities, transportation frequencies etc. Especially the emergency service people, as if there were ever a case where they may be caught in a position where morse code may be useful, I don't know what would be. Can you imagine if they used it for at least a secondary level of communications if not a primary one?? People in scannerland would have to learn morse code as well to figure out what the hell is being sent!

ALL-CODE INTL.!!!!!!!!

663. BPL interference - reply comments - YOUR ACTION REQUIRED

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-10 06:09:23 UTC
From: robkemp90210@hotmail.com
Message-ID: <6114e4af.0307092209.3569cfec@posting.google.com>

The BPL NOI has now moved to the second stage where reply comments can be submitted to the FCC.

Below are links to the comments from the cretins who want to flood our shortwave with interference.

IMPORTANT to read and tell the FCC what is wrong with their comments - many dismiss the interference issue without any data.

A huge amount of data has been submitted to the FCC that proves beyond all reasonable doubt that BPL is a gross polluter but more submissions are needed.

Please post comments and thoughts to this thread to provide ideas for other submitters.

1 is positive (already filed comment)

One babbled about a "slur on the folks who live in rural USA", forgetting that the vast majority of Internet traffic is comprised of illegal mp3 downloads, Internet phone traffic, mass spam e-mail and porn browsing, i.e. pure garbage traffic. Did I insult anyone? I really don't give a flying fuck. I want my ham radio.

More than one wondered about the reliability of the 60 dB figure, stating that, if it is correct, other commercial users would be affected. Here's why they won't be:

To begin with, unlike amateur radio, none of the other radio services are weak signal users. Whereas in ham radio, DX-ing is more than a rule than an exception, commercial services aim for reliable, strong signal communication. Therefore, while even as little as a 20 dB noise increase (low enough for you, Art?) effectively prevents SW ham radio usage, commercial users will barely notice it.

An overwhelming majority of SW ham radio stations are located in urban areas with a high density of low and medium voltage power grids. Military installations, otoh, are typically found in isolated rural/suburban surroundings where they have a full control over (not) allowing BPL into the bases. Btw, high voltage cross-country power lines will not carry BPL, remember? There is fiber optic already in place for that.

BPL is going to be delivered all the way to your power outlet, as well as to your next-door neighbor's power outlet, and to every single power outlet of every single resident in your city or town. Think you have a hard time from your neighbor's electric toothbrush pwr supply? You ain't seen nothing yet.

FAA does not use SW, afaik, so they couldn't care less. Ship to shore? What ship to what shore? They use satellites. Navigational? Nobody navigates downtown Los Angeles or in Manhattan. Any SW navigation is done thousands of miles away from the power lines. Who's left? Some governmental agencies that will solve a problem by increasing their budgets to allow for stronger transmitters and longer antennas?

The only way I see this being resolved is if there's enough RFI obliterating all of Rush Limbaugh's AM channels. Only then will FCC listen, because they'll have to.

That doesn't mean we have to go down without a fight. In order to fight, ARRL, the *only* American ham radio organization, needs money. However, if you'd rather cut off your nose to spite the face and pretend a turd is not in the punch bowl, it's your funeral...

Then your phone line has issues. The only way that could take 4 hours is if the download takes at least three, which means that your effective baud rate was just about 2,400.

That could very well have been. Normally, it runs very close to the 56k and downloads are fairly quick (for a dial-up), but there are days I notice a definite decrease in speed. Overall, though. I prefer paying the 9 bucks a month for dial-up opposed to the 40 plus bucks for cable.

No, I certainly do not. If someone wants to only operate cw, only
ssb, only 2 meter FM, then fine, and they are just as much a ham
as someone who operates multiple modes. And I certainly do not
look down my nose and take a superior attitude toward those who
might choose to limit their operating to one mode like others here
on the group.

I don't think we need a conclusionary synopsis Zoran, I believe just about everyone here knows full well how to read.

Did you ever stop and consider that because the responses to your original post were such, that perhaps the whole BPL matter is the usual ARRL exacerbated hyperbole?.....In the old'en days they called it "Much ado about nothing".

The effort is of no consequence when judging the need
for any specific requirement. The only thing that matters
is clear and compelling reason(s) to have or not have
a particular requirement. The FCC weighed in on
morse rational in the R&O for 98-143 plus the
subsequent petitions for reconsideration.

Cheers,
Bill K2UNK

> > Where is the NTIA in all this?
>
> Waiting for the right moment. Or totally oblivious.

There was an earlier discussion on this topic. The ARRL petition for
ham ops on 60M was submitted well before the WTC towers came down. We
agreed that the reason that the NTIA finally piped up was probably
because 9/11 was a wakeup call for all federal agencies and they went
back and reviewed their homeland security assets and tightened 'em.

> > They sure got their knickers in a twist

They already did that to some extent ref: The NTIA 60M maneuver. But
this BPL thing has to be another whole level up from their
perspective. Some of it might be underway behind closed doors. We
dunno.

> > Hams are not
> > the only users of HF, in fact we're close to being bit players

> fed to the secondary side?

They're all vaild what-ifs but don't expect Powell, Inc. to bother getting all wrapped around techo details like leaky filters and insulators.

I doubt that the piles of objections to BPL posted by individual hams will carry much weight in the decision process. We're a lousy 0.2% of the national population and a big percentage of that tiny constituency can't operate below 50 Mhz.

Heavy hitters like the IEEE weighing in against BPL is another whole story however. I think the fates of BPL and HF ham radio will hang on the coat tails of The Really Big Guys like the IEEE, NTIA, the spooks, etc.

The ARRL did one helluva thorough job in their comments package and are to be congratulated for that effort. Unfortunately there is a question about ARRL clout.

> > Question for Phil: At what point can opponents of BPL take it out of

> FCC could make life VERY difficult for the winners, or the winners'
> service, in a zillion different little ways.

Don't believe it. Administrations come and go on regular 4/8 year cycles, the top end of the FCC empire comes and goes accordingly. We might piss off the transients at the top but screw them, they'll be long gone shortly.

The pros within the FCC we normally deal with are there forever and know BS when they see it. Professionals who hold grudges ain't professionals. They don't take being dragged into court in civil cases personally, it's just another business proposition they get paid to handle. Engineers, hams and neighbors get pissed off when they get sued. Lawyers and regulators don't.

> Trying to "go over the FCC's head" is a last-ditch

Yup, a celebration of less knowledge.

Its important for informed Americans to get their news from as few,
controllable sources as possible.

If we think that he, or anyone all that high on the food
> chain at the FCC gives a rat's patootie about what's going on in
> Amateurland, we're fooling ourselves.

Some in Amateurland have always done that. As long as they congregate
in PCTA groups and invoke the PCTA double standard, they can insulate
themselves from reality.

> As far as I'm concerned, it should have happened years ago. I think the

I think the written exam material IS "harder," but the format lends
itself to less than stellar results in retained knowledge.

That's exactly what it is. Most of the return current is in that wire.

The system you describe is in use all over the Northeast.

Agreed - but the system described doesn;t use earth return.

The real villians for radiated noise are the medium voltage distribution lines.
For conducted and induced lines, it's the low voltage service wires.

Two words: Skin effect.

Because of skin effect, RF doesn't penetrate the earth very far. Which is why installing radials under a vertical can make a big difference in antenna efficiency.

At DC and low-frequency AC, the penetration is much deeper, and ground return can be used successfully. The old landwire telegraph used ground return for circuits hundreds of miles long. Tests of HVDC transmission using ground return for currents in the thousands of amperes have been successful.

IOW, let's speculate.

>Just what would you
>expect the USA position to be with regard to the New vs Old ITU
>treaty if the USA doesn't ratify?

That depends on WHY the USA doesn't ratify, and how the non-ratification is done. Seems to me that the lawyers could argue it either way. Some would argue that the USA is no longer bound by treaty provisions of the old treaty that don;t appear in the new one, while others could argue the opposite. Plus all sorts of variations.

>Remember, ratification, if at all,
>is a USA function and the end result of ITU doesn't require
>a follow-up ratification process from each administration.

Yet at the same time, if nobody ratifies it, the new treaty means nothing.

Note that at the present time, the USA is acting as if the old treaty is still in force. The fact that there's a new one awaiting ratification doesn't make the old one and its requirements immediately disappear.

Three possibilities, Dave:

1) Those federal agencies are clueless about the interference potential of BPL
(not very likely)

2) Those federal agencies figure that since their facilities are not located in
residential areas and will not get their 'net access via BPL, there isn't much
they need to worry about (possible, but not likely)

3) Those federal agencies are sitting on the sidelines while the "civilians"
hash out the details and do the hard work of making proposals and comments. If
the ARRL and amateurs can get BPL squashed or controlled, those federal
agencies don't have to do a thing. (likely?)

Right there is exactly what I was talking about a few threads ago.
Nothing is lost by learning Morse Code. Why some people seem to think
that learning Morse code will make them forget something else is beyond
me. The one exception to that is learning to make wine or beer, and then
only when you drink the results.

You'll need a better argument than this JJ. I use an automobile, I know
how to ride a horse properly, bicycle occasionally and I walk quite a

bit. And laziness doesn't enter into the equation. If you are trying to equate transport modes with ARS modes, you simply use the one that is appropriate at the moment.

As it should be. We should have standardized long time ago.

> So many countries belong to the CEPT agreement that it will place a huge

As it should be. Maybe the travelling amateur will spend a few
dollars and help the accomodating countries economy.

Why is it when a person shoots a rabbit out of season he is called a
poacher rather than a hunter, but when a CBer uses illegal power, he
is still called a CBer?

There we go.

Now we're on the same wavelength, I did give some thought to the matter, and say if the ARRL were to be interested in doing something like this, a program could be put together to run on a Win95 minimum system. Then an effort could be made to purchase older laptops, like early Pentium systems. These can be picked up pretty reasonably.

A pilot system could be tried in a few places to see how well accepted the system is.

My only negative thoughts are that very seldom will we get a system that relies on used equipment. But there it is, I think the cheapest way of introducing computer testing.

I believe that the only difference between CEPT Class 1 and Class 2
is the Morse requirement for Class 1 ... the written tests come from
the "HAREC" standard ... and I *believe* that they are the same.

FWIW, I support keeping the code in and I am a technician that is
trying hard to learn this. Code still has a use and it makes one
commit effort to upgrade to higher classes. It causes those that are
not willing to work to be left out and does anyone want people in this
activity that are not willing to put effort into learning?

Sometimes the US does the right thing even though the rest of the
world makes another choice. Lemmings march into the sea. Are they
right?

Remember, the ARRL *did* sue the FCC some years ago, seems like it was in the 80's, and IIRC the issue was
the 220 mhz reallocation, though I'm not certain of that. Sure seemed a poor idea to me.

Didn't say it was, JJ, and it became far more common with the commercial phone licenses before it descended on ham radio in spades with the question pools among other things. Today it's much worse than ever. But you already knew that.

Surely you know more about how treaties work than to believe that. No treaty--nor the recension of one-is effective until ratified by the governments involved.

And since "concensus" is a term totally foreign to ham radio, Bill Cross himself, the big stick at FCC for ham radio, the guy who makes all the rules that are rubberstamped by the other otherwise-occupied staff, will make the new rules for us, himself. He said so at Dayton a couple years ago.

> radio, not even close.

Actually, I was a "Private Sector Advisor" member of the US Delegation
(that's different than an "Observer" ... IARU was an "Observer" not a
member of a Member State Delegation)

I was officially listed on the Delegation as a private sector expert on
Agenda
Item 1.7, as well as the agenda items that my employer sent me for. (This
is
because I was heavily involved, through NCI, in the US prep process for the
WRC on 1.7.)

There were also two other private sector "experts" on the US Delegation
for Agenda Item 1.7 ... Paul Rinaldo and Jonathan Siverling of the ARRL.
(However, before anyone "flames" ARRL for not retaining the Morse
requirement in the ITU Radio Regs, I would remind them of two things:
1) the IARU postion was that that requirement should go
2) members of the US Delegation are *bound* to support the US position,
which was also that the Morse requirement should go.)

Interestingly, when the US presented its Proposal on 1.7 at the CITEL
meeting in Mexico City last year, the FCC International Bureau rep asked
me to present the document in Plenary (I was also attending that meeting
as a member of the US Delegation) ... I asked him "Why me, not you?"
His response was "You know more about the issue and the background."

What can I say? I participated in the process ... I don't recall you as
having
participated in any of the US WRC prep meetings, Brian ... nor did I see you
listed as a member of the US Delegation to the WRC.

I fully agree with Bill ... I will also oppose any attempt to eliminate
written testing on technical, RF safety, rules/regs, etc. THAT's
what separates ham radio from "personal radio services."

Since folks have attempted to disparage me in the past by referring to me
as "Squiggy," I will assume you are referring to me ...

I never have, nor would I, make such a stupid assertion.

Access BPL *does* present a MAJOR threat to HF operation.

My good friend Ed Hare, of ARRL, and his colleagues, have done
an excellent job in the technical analysis that the ARRL filed with
their comments in the BPL NOI ... I would suggest that everyone
read it and be prepared for the next round of comments ... assuming
that the FCC moves from an NOI to an NPRM on this issue.

I still wonder about that AM tower I once passed in Santa Clara,CA that was sitting on a salt marsh right at sea level....do they have all that wire in the ground, er, water, too?

That was exactly what I said in my comments to FCC on the docket:

"The use of the HF part of the spectrum as we have always known it will be ended".

I doubt it, but for sure one can't be sure.So many organizations seem populated with something other than proficient talent that such things seem to get overlooked.
One wonders about that with NTIA and the 60 meter fiasco.
I know if I was in a position of responsibility in *any* organization I'd sure not sit by and allow this to go forward opposed only by other users when my organization had a serious vested interest in the outcome.

One more hint-some of the best DX contacts I've ever had occurred when I called
CQ
on a "dead" band. You get to work the rare one who answers without the "benefit"
of
the hounds, no pileup, no QRM, at least until enough others hear you working him
to
draw a crowd.

Carl has obviously been on a Jihad against Morse code for most of his adult
life.
Seems he must have flunked his 13wpm code test for the General in San Diego many
years ago and wound up getting enough of that 13wpm to qualify for an
old-category Tech. That daunting experience seems likewise to have left him with
a load of bile that has taken all these years to find a relief outlet for...NCI
and its
"mission" have been right up his alley.

And you're right, of course- it would have been much easier for him to have
just
tuned in W1AW code practice a few more sessions and retested, but what the hey!

These systems, as well as military HF systems, usually operate in relatively
strong signal
environments. A lot of ham HF operation (especially DX chasers like myself)
try to work with
very low signal levels. Hams are possibly the only HF users in this
category. It seems likely that
the proposed BPL operation could substantially hamper weak-signal operation
while not really
impacting strong-signal operation.

I think the threat is quite real --- an yes, I did file a comment (although
it was a rather small one).
And yes, I am sending a contribution to the ARRL---it seems they are
fighting as best they can.

Phil,

As an expert in dealing with the FCC, what is your recommendation on
the issues to bring to the FCC's attention? And how should our
comments be phrased?

Is preventing reception of shortwave broadcasts a first amendment
issue?

Thanks

"Making one commit effort" is not a legitimate regulatory purpose
for the FCC.

If YOU want to learn and use Morse, fine ... same for anyone else
with the same desire. But that does not give you (or anyone else)
the right to force it on everyone else.

> It causes those that are
> not willing to work to be left out and does anyone want people in this
> activity that are not willing to put effort into learning?

I want all the technically competent folks we can get ... with homeland
defense spuring increased demand for use of HF frequencies, we need
to increase our numbers to protect our spectrum

NOTE: I said "technically competent folks" ... I am NOT in the
"ham license in the Cracker Jacks box" camp AT ALL.

I just don't believe that forcing folks to learn Morse to get an HF
license is a reasonable requirement. Those who want to use it
will have to (voluntarily) learn it ... those who have no interest in
Morse, but could contribute technically, in public service communications,
etc. should not be excluded because of their lack of interest in Morse.

> Sometimes the US does the right thing even though the rest of the
> world makes another choice.

I'm confident that the FCC will do the right thing ... they will ultimately
eliminate the Morse element from US amateur license tests.

> Lemmings march into the sea. Are they right?

I don't see the relation ... lemmings are animals acting on some instinct
...
(most) hams are reasonably rational human beings ... big difference.

I am sure the Coast Guard and Navy are trembling in their boots
that the day will come when the only thing they may have to rely
on is CW and no one will have the skill.
The other services realized that CW has been outmoded for
communications for some time and finally gave it up. For hams it
is just another mode to communicate and those who like that mode
will learn it whether it is required or not. Don't set on the edge
of your chair Larry and Dick, anticipating the day when you and
your code skills are going to be the only thing to save the day.
With all the different types of coms available today, it ain't
going to happen. CW is outdated, but it will be a part of ham
radio for some time to come just because of the tradition, but
that is the only importance CW can hold in ham radio, tradition.

I doubt Mr. Powell has much knowledge of what the ARS is, let alone
what the issues are. That's his staff's job.
>
> As far as I'm concerned, it should have happened years ago.

Why? Hams still use code. It's very popular. Learning enough code to
pass the test is about as hard as learning to recognize about 40 words
in a foreign language.

> I think the
> written tests should be harder,

That's easily arranged. All you have to do is write up some "harder"
questions and answers in multiple-choice format, and submit them to
the QPC.

There were a bunch of structural changes for the written tests
suggested to the FCC back in '99 as part of the restructuring, but
they ignored all of them and instead reduced written testing.

> and I think you should re-test when you renew your license.

Nice idea - are you volunteering to be a VE? Because requiring retest upon renewal would just about triple the tresting workload of the VECs.

Retesting would be a very tough sell because you would have to convince FCC that there is some sort of serious problem caused by lack of it.

They'll look it up in the book and learn it then. Most of my hamming
today is QRP.

> > If someone never intends to homebrew, why should they test on any
> > equations.

> What is they suddenly get the urge to build a homebrew transmitter
> or amplifier?

They can learn it then. Besides, the knowledge required to pass the writtens is not nearly adequate to actually homebrew a transmitter.

> > Sounds like we should maybe make up our own tests.

If the argument that we shouldn't require code tests of those who don't plan to use code is valid, then we shouldn't require knowledge of other things of those who don't plan to use them.

> Maybe you had rather be call in to be tested on a new mode each
> time you decide to operate a new mode.

Why? FCC doesn't do that now.

The last time I was required to take an FCC amateur radio exam was in 1970. The tests I took had no questions on satellites, no questions on RF safety or exposure, no questions on PSK-31, Hellenschreiber (sp?), DSP, frequency synthesizers, APRS, spread spectrum, or anything related to VEC testing. Heck, I don't even think there were any questions on FM repeaters! There were no questions on 30, 17 or 12 meters, nor 902 MHz, because those were not hambands yet.

There WERE questions on the bands and subbands allowed to the various license classes - most of which have changed since then. (Didja know that 75 meter 'phone used to be only 3800 to 4000, and 40 meter 'phone was only 7200-7300?) There were also a lot of questions on stuff I'd

Yet for 33 years, FCC has trusted me to keep current with the rules, regs and operating practices, and I've done a pretty good job of doing so, I think. Homebrewed a lot of stuff in that time, most of which required knowledge not on any test.

Why was I forced to learn radio stuff I've never used just to pass the test? Why didn't the test give me credit for radio-related things I already knew that were not on the syllabus?

Who says it was a fiasco? All NTIA had to do was send a letter to FCC.
Proposed amateur access of 60 went from 150 kHz with lots of modes and
power to 5 channels, one mode, and a severe ERP limit.

But NTIA waited until AFTER comments and reply comments were closed to
send the letter. That way, nobody could officially refute them. Slick,
very slick. You think the only barracudas in radio are hams?
bwaahaahaa.

> I know if I was in a position of responsibility in *any* organization I'd > sure

Only if you weren't sure you could control the outcome. All NTIA, FEMA
or anybody else has to say are the HS words and BPL is history, baby.

But they don't want to do it unless they have to.

Why not remove 2x1 & 1x2 from none 20WPM
extras? You can get your HF privileges.
Everyone will be able to know that you
can hack CW with your XXXX callsign.

It will separate the men from the
anti-code whiners.

As a new tech that has yet to pass the
CW exam I have noticed that a lot of
1 land extra calls were taken by folks
that could not make 13 wpm GENERAL before
restructuring. Hehe

Let's stir up the hornets nest.

Bill

P.S. Why doesn't everyone take a break
from this? Let's go back to SSB versus
AM.

N2EY <N2EY@aol.com> wrote things. They're marked like this: N2EY>
KF6TPT (me) wrote things in a prior post. They're marked like this: TPT>

N2EY> The Senate has to ratify the new treaty first.

I keep hearing this getting thrown around, and certainly, my civics teacher told me this. However, I can't seem to find any mention in the congressional record of the ratification after WRC-2000.

Can someone point me at it?

TPT> Michael Powell is rather busy these
TPT> days, what with all the brouhaha surrounding ClearChannel and the media
TPT> consolidation. If we think that he, or anyone all that high on the food
TPT> chain at the FCC gives a rat's patootie about what's going on in
TPT> Amateurland, we're fooling ourselves.

N2EY> I doubt Mr. Powell has much knowledge of what the ARS is, let alone
N2EY> what the issues are. That's his staff's job.

That's exactly my point. Chairman Powell (and other high-ranking FCC staff) doesn't need to know or care about the ARS. It makes absolutely no difference to those in charge of the FCC, whether we have a code requirement or not.

In this current incarnation of the FCC, I think it's reasonable to say that if code testing doesn't provide a benefit to the FCC, then the FCC will be eliminating it as quickly as they reasonably can.

TPT> As far as I'm concerned, it should have happened years ago.

N2EY> Why? Hams still use code. It's very popular.

I would even just say "Hams use code". But hams use AM, and RTTY, and PSK, and FSK and yes, even phone. Some of us like satellites. Should you have to prove that you're capable of tracking and hearing UO-14 before being granted a license to transmit on 145.975 MHz? Or that you know all 26 phonetics and how to locate your grid square (a useful item for a VHF+ operator to know)

CW is the only mode that is -required-. Sure, even hams who never use RTTY had to answer written questions about it... but the difference is, you don't have to get all written questions correct. A person can become at least a General, if not an Extra, without ever answering a question about RTTY... just skip them, and make sure you know the rest of the material.

The end of code testing does not mean the end of CW, nor should it. But as far as I'm concerned, CW is just another mode, albeit one with a certain history and artistry to it. With regards to testing, it should have about as much importance as the rest of the modes (i.e. a handful of questions in the pool, and perhaps a reference in the questions on frequency allocations, nothing more, nothing less)

N2EY> Learning enough code to pass the test is about as hard as
N2EY> learning to recognize about 40 words in a foreign language.

That's not the point. The fact that just about anyone can learn it given enough time and practice really just means that all that is really being tested is a potential ham's level of dedication (and how much free time he's had in the last few months)

There are plenty of people out there who will say that testing someone's dedication is a _good_ thing for our hobby. They're the ones that want to keep the "riff-raff" out. Or at least, that's how it seems.

I just don't see that. The enforcement actions taken by the FCC don't reflect that either. Many of the people cited for illegal operating practices have taken 13 and 20wpm code tests.

What I see is a generation of people to whom technology is second nature. I see hardware engineers and electrical engineers building amazing commercial applications up in the SHF frequencies. Most of these people aren't hams. I don't see them knocking down the doors to come join our ranks, but I don't see us reaching out to them and giving them a reason to join us, either.

We're doing just the opposite, not entirely with the code test, but with the attitude that goes with it.

I'd love for some of the current high-tech talent to bring their knowledge into the Amateur HF arena. We've seen what happens when we bring them into VHF (I'm thinking about APRS, WSJT/JT44, lots of software DSP stuff).

But to do that, we need to change. By telling a 22 year old engineer with a 10-hour a day job and a girlfriend that he needs to spend "just an hour a day" sitting and listening to code on headphones for the next month, we are essentially telling him to get lost. He won't have that kind of free time until he's retired. Plus he's got other methods of global communication, so the overall gee-whiz factor of HF is definitely not as much of a draw as it was years ago.

But show the same engineer a PSK31 pileup and his eyes light up. Perhaps he's thinking of a better way to discriminate between the colliding warbles and pull yet another call sign out of the morass. Maybe he's a software engineer. Maybe a DSP guru. Whatever he is, he could be an asset to the ARS, and play a part in enhancing the radio art. But he's probably not very interested in CW. Perhaps he will grow to work CW, perhaps not. But he definitely won't learn it until he has been exposed to other modes of HF. So, under today's rules, he

moves on to other things... and we'll never know whether his DSP ideas would work.

There was a time when children were frequently exposed to ham radio, but those days are past. Not every EE graduate has a dipole in his attic anymore. The fact is, if the kids and the geeks aren't joining us... something's wrong, and maybe we should fix it.

I think that it's time for us to grow up, evolve with the times, welcome newcomers into our ranks, and continue furthering the radio art.

-Jeff

PS.

TPT> and I think you should re-test when you renew your license.
N2EY> Nice idea - are you volunteering to be a VE?

Yes. I'd be happy to be a VE.

hey!

Talk about a "load of bile"! NCI followed all the rules, participated
actively in the preparation for WRC and had an NCI Director at the
WRC itself and all Dick can do is whine. Seems like the PCTA
folks didn't care enough about morse to even try to retain it. Guess
morse will really die off if the PCTA folks are the sole recruiting
effort for morse going forward.

Cheers,
Bill K2UNK

is
> done.

There's only two ways non-ratification can be done:
1. No action is ever taken at all to ratify or
2. The vote for ratification fails.

> Seems to me that the lawyers could argue it either way. Some would argue
> that the USA is no longer bound by treaty provisions of the old treaty
that
> don;t appear in the new one, while others could argue the opposite. Plus
all

Arguing for the old treaty makes no sense since the rest
of the world is on the new treaty.

> >Remember, ratification, if at all,
> >is a USA function and the end result of ITU doesn't require
> >a follow-up ratification process from each administration.
>
> Yet at the same time, if nobody ratifies it, the new treaty means nothing.

Nobody has to ratify. Many, perhaps most, administrations
simply abide by the new treaty having empowered their
repective delegations to negotiate/participate on their pehalf.
The USA has a specific ratification process for ALL
treaties as a matter of USA law.

> Note that at the present time, the USA is acting as if the old treaty is
still
> in force.

Actually I disagree. I believe the official posture is that the USA
acknowledges the new treaty but makes no effort to change
USA law/rules until after USA ratification. I don't believe the
FCC has any expectation that the rest of the world is
respecting old treaty obligations.

> The fact that there's a new one awaiting ratification doesn't make
> the old one and its requirements immediately disappear.

That's only true to the extent that any specific country has their own
ratification process...and failure to ratify by one or more
countries does NOT nullify the new treaty.

Cheers,
Bill K2UNK

You could say that to a certain degree. The old treaty is dead
as far as the rest of the world is concerned. The USA process
of ratification is a unique post WRC approval process for
the USA only. The rest of the world isn't
waiting for USA approval.

So tell us Dick, if the USA doesn't ratify does the WRC-03
become null and void? Ratification is a USA process that
may or may not have similar process in other administrations.

Cheers,
Bill K2UNK

> I fully agree with Bill ... I will also oppose any attempt to eliminate
> written testing on technical, RF safety, rules/regs, etc.

The way it works is a slow, gradual reduction of written testing, not complete elimination all in one go.

Consider the 2000 restructuring. IIRC, to get a full-privileges license, we went from 5 written tests totalling 190 questions (30/35/35/50/40) to 3 written tests totalling 120 questions (35/35/50). For a General, it went from 3 written tests totalling 100 questions to 2 questions totalling 70 questions. Technician got the biggest reduction - from two tests totalling 65 questions to one test of 35 questions.

Yes, the Q&A pools were merged and the rules simplified, but does that account for the large drop in both the number of tests and number of questions? Note that the NPRM comments were full of suggestions to improve the written tests. Indeed, if there was any subject in which there was general consensus among those responding, it was that the written tests were either adequate as they were or needed to be improved. But all that was done was to reduce written testing and remove the requirement that each test contain a certain number of questions from each category.

In fact I recall that several of us were in agreement back before restructuring that the then-current tests for a Tech were inadequate for the privileges granted, particularly being able to run 1500 W output at meat-cooking wavelengths. But FCC disagreed, and cut the testing for a Tech almost in half.

Some folks here have proposed either a single license class, or at most two license classes. It is logical to conclude that such changes would result in even less written testing.

Perhaps the rewording of S25 wrt written testing standards will have an effect - but I sincerely doubt it.

I have read that W5YI, Fred Maia, has proposed making the license tests "less technical" in order to attract more newcomers. Perhaps this is where the misunderstanding about NCI's stand on written testing originated.

> THAT's
> what separates ham radio from "personal radio services."

That and a lot more. Like the use of a wide variety of bands and modes - including Morse/CW.

But to ask the devil's advocate question:

Why MUST there be so much written testing for an amateur license, given that most hams use modern, manufactured equipment today, and that almost all FCC enforcement actions against hams are for "operating" violations rather than technical ones?

> Maybe the noise floor is pretty low at WA7AA! :0)

I am not trying to be derogatory just trying to be reaslistic
but my logic may be incorrect!!!
60db I suppose could equate to an S9 signal. Is this in error?
Are we saying to the FCC that in all cases the noise will be at
a S9 level? Say the proponents Prove that the noise level will
never exceed S1 and state that the ARRL is over reacting !
If they also state that this benefits the majority of internet
users (or total population)in that it can reduce costs by half,
then ham radio would be in a very sad position.
Now I have heard it stated that from 14 thru 30 Mhz the actual
noise level is far below the normal radios thresh hold, so what
will be the TRUE noise level that we would have to compete with?
If it was declared specifically what 'S' noise level increase that
we would have to contend with on EACH band rather than the inuendo
of S9 level, we would be better positioned to determine whether we
were complaining for complaining sake and frittering away any
possible influence we do have for the future.
If we are to use our number strength wisely for the benefit of
the hobby then it would behoove the ARRL to be very specific
with respect to the possible danger so that the label of
obstructionists will not be aplied at a future date.

>60db I suppose could equate to an S9 signal. Is this in error?

No, I don't think so.

>Are we saying to the FCC that in all cases the noise will be at
>a S9 level?

They're saying that an Access BPL system, based on the technologies which have been proposed (and tested in other countries), would induce enough energy on nearby amateur-radio antennas (e.g. a dipole located within 30 metres of the power line), to raise the broadband noise level at HF frequencies on the rough order of 60 dB above the ambient noise levels which are now generally present in urban areas.

> Say the proponents Prove that the noise level will
>never exceed S1 and state that the ARRL is over reacting !

As far as I've been able to tell from reading the various materials, the BPL proponents here in the U.S. haven't made this sort of claim, nor have they performed any significant number of actual field trials to measure interference and noise levels.

They seem to be evading or ignoring the issue.

>If they also state that this benefits the majority of internet
> users (or total population)in that it can reduce costs by half,
>then ham radio would be in a very sad position.

I don't think they've made that level of claim either.

> Now I have heard it stated that from 14 thru 30 Mhz the actual
> noise level is far below the normal radios thresh hold, so what
> will be the TRUE noise level that we would have to compete with?

You have, I think, heard incorrectly.

What I have heard and read in the past... and what I've read in the noise specs posted in the ARRL's response to the FCC NOI - is that on the HF bands, the noise floor is dominated by atmospheric (QRN) and man-made (QRM) noise, *not* by the noise floor of the receiver's own electronics. The ambient noise level most of us face today is many dB up *above* the radio's threshold, not "far below".

It isn't until you get up into the VHF bands that the receiver's
self-noise becomes equal to, or greater than the ambient noise level.

That's the problem with BPL. It's not just that the noise levels it
generates would be quite a lot above the noise floors of our
receivers' electronics - they'd be well above the typical ambient
"band noise" levels present today on most of the HF bands.

In other words, BPL *will* bury a lot of the weak signals we can
receive today, and will bury 'em deep.

>If it was declared specifically what 'S' noise level increase that
>we would have to contend with on EACH band rather than the inuendo
>of S9 level, we would be better positioned to determine whether we
>were complaining for complaining sake and frittering away any
> possible influence we do have for the future.

So GO READ THE ARRL's RESEARCH, won't you? As I recall, the 121-page
analysis they posted a couple of days ago shows the typical
receiver-self-noise and typical ambient-band-noise levels in each of
the HF bands, and also shows the noise level which could be expected
to be created by an Access BPL system running on power lines located a
typical distance from an urban amateur's HF antenna.

They've done the research, Art, based on what appear to me to be very
reasonable (and probably conservative) models of BPL behavior,
powerline configuration, and radio sensitivity. The data's out there.
Go look for yourself.

> If we are to use our number strength wisely for the benefit of
>the hobby then it would behoove the ARRL to be very specific
>with respect to the possible danger so that the label of

Well put, Jim. It's what I've been trying to say, without getting into
a "slippery slope" argument. You've phrased it very well indeed. Thanks much

I've been trying to say the same thing as devil's advocate, and I fear
that Carl and Bill may not quite grasp the concept.

Whether or not the Morse Code is an anachronism, whether or not it
should or should not be tested for, the elimination of the Morse code
test *is* a reduction in the amount of knowledge needed for a amateur
radio license; undeniable unless a person wants to look silly.

Those responsible for such a reduction in knowledge needed for a
license, regardless of their reasons, now find themselves in league with
those who propose even less knowledge needed for that ticket. Politics
makes for strange bedfellows.

I understand that Carl and Bill do not support lessening of the
knowledge needed. But that does not really matter. Those who want the
tests to consist of nothing but sending in an application (if that)
applaud their efforts That is another thing that is pretty hard to deny.

Let's put it this way: Those who do not believe that the tests should
be radically simplified or eliminated, but believed the Morse code
requirement should have been eliminated may some day find themselves on
the losing end of the proposition, just as those who support Morse code
testing have lost the battle at this time.

I remember when you had to have a license to use CB.

just something to think about......

No, that's not what I meant. Several have mentioned the treaty changes have to be ratified by the Congress. What I'm asking is if there isn't already a clause in the current treaty (the one already ratified by Congress) that allows minor changes to comply with ITU changes without additional ratification by Congress.

Another words, isn't there already a mechanism in the previous ratified treaty that would allow the changes to the treaty without further action by Congress. If so, wouldn't this allow the FCC to drop code without seeking additional Congressional ratification.

Of course not! But if you live in an area criss-crossed by active lines, and have the sigs coming into your house you can expect some pretty strong interference.

> Say the proponents Prove that the noise level will

I will accept Ed Hare's (and the other testers) figures. You could if you like come up with some of your own.

> If they also state that this benefits the majority of internet
> users (or total population)in that it can reduce costs by half,
> then ham radio would be in a very sad position.

It isn't just hams who use HF. Some homeland security type services do also.

Would you ever design a system that spills rf all over the place like this? Why on earth should we shield televisins, radios computers, etc if we are going to put a huge antenna up to negate all that shielding?

There are good ways to get a broadband signal into a person's house without messing up everything else.

Adn why should the internet have priority over everything else?

The problem with your analysis is that you are attempting to
apply some mystical "amount of knowledge" criteria which
is NOT what licensing is about. Certainly, as a separate
knowledge base, the end of morse testing reduces one speciifc
piece of knowledge and testing. BUT, that is all it does.

> Those responsible for such a reduction in knowledge needed for a
> license, regardless of their reasons, now find themselves in league with
> those who propose even less knowledge needed for that ticket. Politics

FALSE - As Jim will attest, I have been an advocate of better written testing for a long time. Working to eliminate an unneeded (IMHO...but shared by WRC) requirement does not automatically put me or anyone else inleague with those that have a desire to lower or eliminate written tests.

> I understand that Carl and Bill do not support lessening of the

My own feeling is that anyone who would whine about having to
"prepare" for the Element 2 written exam probably has never touched a
radio in his/her life other than maybe an AM/FM broadcast receiver.

With that said, and upon further consideration, I have to admit that
you're probably right, there probably will be some...and telling them
about how we used to have to hike barefooted 50 mile suphill both ways
to and from an FCC office to take the code test and the gawdawfullest
written exams anybody ever heard of isn't going to cut it with those
folks either. I myself might prefer to take a more positive
approach...yes, it's a pain in the neck to have to read that silly
book but look at the privileges you get once it's all over with, etc.

I dunno if I'd call them technically inept. These are guys who've
probably forgotten more about theory than I've ever learned. There are
other reasons for their difficulty with programming today's radios.

>always strove to keep up with the times as far as basic technical knowledge

The last two years at Field Day, the only guy attempting any digital
mode other than CW was a no-code Tech. He made a few SSTV contacts.

>>I'm not talking about relative newcomers
>>either, I'm talking about guys who were hams before I was even born.

>
>Yup, I know. They're a real problem, all right. Usually the leaders of
>the "Don't PL our repeater" pack of whiners.

We were forced to PL ours about a year ago when a temperature inversion brought in signals on the input from users of four different repeaters 50-75 miles or more away from ours. Our repeater's transmitter was keyed down almost nonstop for about three hours one day. That was the end...the technical committee decided it was easier to beg forgiveness than obtain permission and enabled CTCSS on the input (we'd been transmitting the tone on the output for years to benefit those with radios with CTCSS decode). Funny thing was, nobody really complained to the board or to the committee. There was one group of four or five guys whose regular chitchat on every other morning moved to another repeater because one of the guys has an older radio that can't even transmit the tone let alone decode it on receive, but they seemed to understand why we had to do it. They were all older hams, but none of them has so far brought in a 2m rig to get help programming it.

>>Furthermore, sometimes it's a no-code Tech who picks up the
>>old-timer's HT and shows him how to program it.
>
>Sometimes, but certainly not often enough. The No-Code Techs are at the
>top of the list of the technically inept, in spite of their protests to the

In our club there are basically two guys they usually bring 'em to. One is me (current General) and the other is a Technician. We've done so many now that we generally just sit down and program the club repeater into a memory (proper offset and tone of course) while they stand there holding the manual and shaking their heads...but when we first started we read a lot of manuals that were very obviously written in Japanese and then translated into English and were very little help even to us - and we've been programming programmable radios almost since the first programmable scanners hit the market (remember the old Bearcat 100?).

>>Never mind that the

>25 WPM while wide awake.

Perhaps...but some of these guys are really amazing. We have at least one guy in our club who can sit there and hold a conversation with five other people, while across the room two guys are working a CW contest, one operating and the other logging, and all of a sudden

he'll turn around and tell the ops, "Work that guy, we need him!"
Invariably when the call is punched into the dupe checker, we do in
fact need that contact for a multiplier, too.

>This has always been the case, John -- I was one of the "technical

>contests, etc. etc.

I've always set up my own station equipment too. It hasn't fallen to
me to maintain a repeater yet. I understand the theory behind 'em but
haven't gained practical experience working on a repeater.

>I don't disagree with you whatsoever about the technical abilities of

Yet above you said (and I cut and paste here):

>Sometimes, but certainly not often enough. The No-Code Techs are at the
>top of the list of the technically inept, in spite of their protests to the
>contrary.

Presumably, then, this means that the lack of technical proficiency is
not related to the lack of CW skills. Well...Technician is the
entry-level license. A Tech isn't expected to have attained the same
level of technical proficiency as an Extra or a General. When they do,
they take another test (or currently, two tests) and upgrade.

>>BTW, Larry, you were supposed to look me up when you came up this way,

This happened during the weeks just prior to restructuring. There was
a discussion of how many license classes we were going to end up with.
Your prediction of three classes turned out to be correct. I'd
predicted two, and so still owe you a roast beef sandwich at Swiston's
in Tonawanda...when you get up to the Northtowns on one of your
occasional trips back to western NY.

The question becomes, qualified to do what?

The fact that I do not have a license to drive a motorcycle does not
make me any less qualified to drive a car. Similarly, the fact that I
choose not to operate in CW purely out of personal preference makes me
no less qualified to operate phone, packet, PSK31, etc.

Still on that kick, eh?

How about a ham who learned it (at least well enough to pass a 5WPM
code test) and now chooses not to operate in that mode anyway? Is that
laziness too, or is it a ham exercising his/her right to operate in
whatever mode he/she chooses from among those permitted to him/her
under the privileges granted by his/her license? (and it is not my
intention to trip you on the point that no-code techs are permitted to
operate in CW anywhere that they have privileges)

>>There are many different modes of operation in ham radio, do
>>you operate them all?
>
>Nope, not all -- but certainly a whole lot more than most hams do. And
>you know something totally strange? My Morse/CW proficiency doesn't
>interfere one little bit in my enjoyment of other modes!

Even though I learned the code well enough to pass a test, I don't
consider myself proficient at it. My lack of proficiency doesn't
interfere one little bit in my enjoyment of other modes.

The only reason I learned code was that it was required to upgrade
beyond Technician class. Passing the code test would have made me a
Tech Plus and earned me some phone privileges on 10m and CW on several
other bands...except that I took the General class written at the same
VE session, and passed it, walking out with General class privileges.

At that point, I could communicate using CW at 5 WPM. At the same
point, I could also communicate using phone at a significantly faster
rate than 5 WPM since I can speak a lot faster than that. I could
also communicate using PSK31 at a significantly faster rate than 5 WPM
since I can type a lot faster than that. Thus, for me the use of
another mode is more efficient for me than to use CW. I would actually
be a less capable communicator if I used CW than I am using another
mode. My facing the code testing requirement did not affect my ability
to speak or to type.

>Well, everyone's estimate of their "enjoyment" of ham radio is a subjective

>atmospheric conditions and man-made interference do not operate in our
>favor.

These days, the vast majority of emergency communications is done on a
local basis, primarily on 2m using FM repeaters and simplex. 70cm is
probably the next most widely used band for this purpose. Neither is
subject to the propagation difficulties often encountered on HF.

In my own estimation, the biggest problem with emergency
communications in the ARS right now isn't the people who don't know
CW, it's the people who think their 5-watt (or 2-watt, or 150
mkilliwatt) HT and its 650mAh battery pack is all they need to
function as an emergency communicator when the proverbial merde hits

the proverbial ventillateur.

>Morse/CW allows us to overcome the majority of those obstacles,
>but only those who know how to effectively employ this mode are qualified
>to make that judgment.

Actually, it's the agencies served by our ARES and RACES and other emergency communications groups who are best qualified to judge the effectiveness of our contributions. The ones I've worked with so far have expressed high praise for the efforts of our team of hams, and we have yet to use CW during an activation.

>Therefore, your argument about "enjoyment" is,
>as are most NCTA arguments, self-serving at best.

Apples and oranges, perhaps. Only the most masochistic among us would claim to actually enjoy pulling a 12- or 14-hour shift in a chilly EOC or standing in a street in the middle of an ice storm. Emergency communications isn't done for enjoyment. DX'ing, contesting, and casual ragchewing are done for enjoyment, and if one enjoys using CW for such activities, there's nothing stopping anyone from doing so. For those who do not enjoy using CW, the same activities can also be enjoyed using other modes.

Allow me to rephrase:

....the USA is still acting *internally* as if the old treaty is still in force.

IOW, the VEs are still giving code tests, and FCC won't allow any hams to operate on the HF/MF ham bands unless those hams pass a code test.

>> The fact that there's a new one awaiting ratification doesn't make
>> the old one and its requirements immediately disappear.
>
>That's only true to the extent that any specific country has their own
>ratification process...and failure to ratify by one or more
>countries does NOT nullify the new treaty.

Agreed. But as far as FCC rules are concerned, the old treaty is still in force in the USA. That's my point.

"Technically competent" as defined by whom? At what level? Competent enough to
use a ham rig, or competent enough to design and build one from scratch, or
something in between?

>with homeland
>defense spuring increased demand for use of HF frequencies, we need
>to increase our numbers to protect our spectrum

Every increase in technical competency requirements works against increased
numbers.
>
>NOTE: I said "technically competent folks" ... I am NOT in the
>"ham license in the Cracker Jacks box" camp AT ALL.

Again - "technically competent" as defined by whom? At what level? Competent
enough to use a ham rig, or competent enough to design and build one from
scratch, or something in between?

Are the current written tests adequate for the technical competency
requirements of the ARS, or not?

If YOU want to increase your technical competency, fine ... same for anyone else with the same desire. But that does not give you (or anyone else) the right to force it on everyone else.

>I just don't believe that forcing folks to learn Morse to get an HF
>license is a reasonable requirement.

Yet even if the code test disappears tomorrow, to get an HF license with reasonable privileges, folks are forced to take a written test that goes beyond the test required for ALL VHF/UHF privileges. To get all HF/MF privileges, folks must take two written tests that go far beyond the test required for ALL VHF/UHF privileges.

>Those who want to use it
>will have to (voluntarily) learn it ... those who have no interest in
>Morse, but could contribute technically, in public service communications,
>etc. should not be excluded because of their lack of interest in Morse.

Those who want to be involved in the technical end of amateur radio will have to (voluntarily) learn it ... those who have no interest in technical subjects, but could contribute technically, in public service communications, etc. should not be excluded because of their lack of interest in technical subjects.

Excerpt from the ARRL Release:

"Studies appended to the League's comments suggest received signal levels of BPL broadband noise at typical amateur stations would be anywhere from 33.7 dB to 65.4 dB higher than typical ambient noise levels in the worst-case situations. "BPL cannot be deployed using amateur allocations in the MF, HF and VHF bands without severely high interference potential," the ARRL reiterated. "

DD, W1MCE

The ARRL has submitted 120 pages of comments including analysis and related data.

The BPL grid includes power distribution on medium power lines right down to the 240 volt feed that comes right into your house!! Is that close enough to create a +60 dB noise level??

DD, W1MCE

So a ham who operates all modes except that he cannot operate radiotlegraphy
because he doewn't know Morse code, is just as well qualified as a ham who
operates all those and also can operate radiotelegraphy.

Surely you can understand the fallacy of your own argument,
all other considerations aside.

It is very easy to skip over my message if it annoys you. Just hit a
down arrow button. I wouldn't agree on the reading skill point, though.

> Did you ever stop and consider that because the responses to your original
> post were such, that perhaps the whole BPL matter is the usual ARRL
> exacerbated hyperbole?

Yes, I considered it for about a millisecond and then promptly dismissed
it based on my previous knowledge of the anti-League posts and feelings
from a small but vocal group of people. The only way you could get those
types on board against the BPL is if the ARRL took a pro-BPL position.
Then you'd never hear the end of it, and demonizing the League would go
on for years, like it has with no-code, for example.

> ....In the old'en days they called it "Much
> ado about nothing".

Yeah, sure. What, if I may ask, is your profession? If you are an
electrical engineer and you don't consider BPL (a dense, unshielded,
unbalanced grid of random-length wires carrying packets of digital
signals with all their harmonics straight to your shack) a huge
potential source of HF noise, then I don't know what to say. Have you
read on the subject? Have you seen the measurements from the field in
other parts of the world? All of this fails to convince you because you
know for a fact that this is just a conspiracy on the part of the ARRL
to swindle you for a couple of bucks?

Fine. Don't support it if you don't want to. Don't join the ARRL. Work
against it any chance you get. After all, CB has no representation and
organization and they've never been in a better shape, huh?

> Then why all the different classes of license?

Different levels of knowledge, of course. Many people already
HAVE the technical knowledge to pass the written tests with ease.
The issue is that SOME people think that those who are in that
position "should be made to expend some (additional) effort" to
get their ham license (they ignore the effort ALREADY spent in
acquiring the aforementioned knowledge).

> >If YOU want to learn and use Morse, fine ... same for anyone else

or
> something in between?

According to the FCC, competent enough to pass the written tests.
I'd like to see folks even more competent than that, but everyone has
to start somewhere.

> >with homeland
> >defense spuring increased demand for use of HF frequencies, we need

Competent
> enough to use a ham rig, or competent enough to design and build one from
> scratch, or something in between?

See above.

> Are the current written tests adequate for the technical competency
> requirements of the ARS, or not?

That's the FCC's call ... as I said, I'd like to see folks actually learn
more
than the tests require (and would welcome more folks who ALREADY
know more than that, but aren't interested in Morse).

The point goes back to Garry Coffman's statement of some years ago
(where is Garry anyway? anybody know?) to the effect that too many
people view the license as a "graduation certificate" rather than the entry
permit into a lifelong learning experience. And too many people value the
license for what they had to do to get it, rather than what it allows them
to do.

> If YOU want to increase your technical competency, fine ... same for
anyone
> else with the same desire. But that does not give you (or anyone else)
> the right to force it on everyone else.

I'm not bitching about today's tests ... the only issue I have is that I
think the Tech test is "light" for the power level it allows at frequencies
that can cook meat. Other than that flaw (IMHO, it's a flaw and the
power limit should be more in line with the technical knowledge required
for the license), I'm content with the tests we have today ... they are
"entry level" for the priveleges granted.

> >I just don't believe that forcing folks to learn Morse to get an HF
> >license is a reasonable requirement.
>
> Yet even if the code test disappears tomorrow, to get an HF license with
> reasonable privileges, folks are forced to take a written test that goes
beyond
> the test required for ALL VHF/UHF privileges. To get all HF/MF privileges,
> folks must take two written tests that go far beyond the test required

for ALL
> VHF/UHF privileges.

Again, I think the Tech test/priv ratio is flawed WRT the power levels
allowed.

I think that the FCC uses HF as a "carrot" to induce folks to learn more
about radio ... and that they are more comfortable with Tech privs because
propagation generally limits the ability for Techs to cause interference
beyond
our borders. (note I said "generally")

> >Those who want to use it

Read your paragraph above ... it's flawed ... how can "those who have no
interest
in technical subjects" "contribute technically" ???

Bill:

Fine with me. I think AM sounds great! I think we should use more of it on all the bands, not just HF. How about including the AM mode on VHF/UHF transceivers?

Some of the best fun and the most enjoyable QSO's I had on phone were on 10-meter AM from the mobile HF station I had in my '78 Plymouth Horizon when I was stationed at Andrews AFB, MD. I used to get consistent 59 signal reports with good audio using 50 watts on my Icom IC-730 and a Hustler fold-over antenna with the 10-meter (low power) resonator.

JJ:

The difference is, I can ride a bicycle, ride a horse, and walk anytime
I want to because I've done all of the above and know how to use these
modes of transportation should the need arise. And, before the question
is raised again in yet another specious argument, No, I was not required
to ride a bicycle or a horse in order to get my driver's license! However,
nobody's going to tear up any roads and return them to use as farmland --
but I can't say the same thing about HF CW allocations!

>>>There are many different modes of operation in ham radio, do
>>>you operate them all?
>>
>>

>superior" way of thinking. Why don't you operate all the modes,
>too lazy?

It is a plain fact that future hams who do not face a code tesing requirement
for licensing are going to be less capable communicators than myself and
others who did. The only thing that got me into the use of the Morse/CW
mode was the requirement to learn it. It made me a better ham in every

respect. The New Age non-code tested hams will be inferior for the lack of this requirement.

>> And
>> you know something totally strange? My Morse/CW proficiency doesn't
>> interfere one little bit in my enjoyment of other modes!

>And you know something even more strange? For many hams, not being
>as proficient as you claim to be in CW,

I don't make any claims to Morse/CW proficiency other than I can effectively employ this mode. I'm certainly a lot less proficient at CW than a lot of other hams, but I can use it when I want to or need to, and I don't get any complaints on-the-air about my technique.

>and/or not operating in
>that mode does not interfere one little bit with their enjoyment
>of other modes either, and that includes myself.

Well, everyone's estimate of their "enjoyment" of ham radio is a subjective thing. However, in this age where we're trying to justify our hold on literally
billions of dollars worth of commercially viable spectrum, we place a great emphasis on our capabilities as "emergency" communicators. Unfortunately, the least reliable modes we employ are those that depend on voice communication -- and these modes are the first to "go South" when atmospheric conditions and man-made interference do not operate in our favor. Morse/CW allows us to overcome the majority of those obstacles, but only those who know how to effectively employ this mode are qualified to make that judgment. Therefore, your argument about "enjoyment" is, as are most NCTA arguments, self-serving at best.

Bill:

Nice try, but not quite the same thing. A prospective ham not wanting to learn and/or use the Morse code is like a prospective golfer not wanting to learn how to putt, because all he wants to do is drive golf balls for distance. Well, even I can drive a bucket balls at the range to kill an afternoon, but I'd never call myself a "golfer."

Morse/CW is an essential communications skill for anyone who is going to consider him/herself to be an effective amateur radio operator. This is the one skill which gives them the ability to keep on communicating under adverse conditions that put an end to communication using less robust or more equipment and electrical capacity-dependent modes. It gives us the ultimate in emergency backup communications capability, which is ever-so important and politically-correct for hams these days.

So, it's your blatant disregard for the possibility that "future hams" will be quite interested in CW and will learn the mode just because they *WANTED* to and not because it was required? You didn't learn CW because you wanted to but because you had to. So, what're you gonna say to those who will obviously be a better ham than you because they learned CW out of wanting to, not needing to?

Of course there is a fallacy since "operate" gives no indication
as to actual level of expertise, the ham who operates all modes except
CW could well be far more qualified then the ham who operates
all modes including CW. For the record, the opposite could also be
true and they might actually be equally qualified.

>They may not want amateurs transmitting on a VHF-Low TV channel.

ISTR that most European countries dumped VHF-low channels many
years ago and that the UK dumped both VHF-Lo and Hi when they
went to the 625 line PAL colour system from the 405 line b/w system.

Perhaps someone "over there" can correct or update that info.

Alun ??

The ARRL took the lead and emphasised the interference with
essential communications. That is the only thing that will be of
any value.

In any event, the Comment phase is closed, and only Reply Comments -
support or opposition/rebuttals to the comments already filed - can
be accepted at this stage.

>Is preventing reception of shortwave broadcasts a first amendment
>issue?

Not at all - the SCOTUS has been very clear in First Amendment cases
that the free speech right is that of the speaker to speak, and does
not guarantee an audience to to hear/receive what is being spoken.

I was told that the then Board of Directors of the League went over the General Counsel's head and insisted on hiring a law firm supposedly specializing in Federal appeals cases, which the client is always free to do. Said firm didn't have a clue about the radio spectrum and who uses what. Their performance proved it. At least the GC is a long-term active ham.

>was in the 80's, and IIRC the issue was the 220 mhz reallocation,
>though I'm not certain of that. Sure seemed a poor idea to me.

It was a good idea - it showed the FCC management (which is no
longer there) that the ARRL can do what the broadcasters do every
week - take an adverse decision into the Court of Appeals.

The problem was, it was done by an outside law firm which didn't do
a very good job because they didn't understand what was at stake as
precedent. Hence, the Amateur Spectrum Protection Bill which, at
long last, has a chnace to be passed during this session.

Well Arnie, nice of you to take my text out of context.
You try to imply by my stating the obvious, that I am
saying we should end tests and that is BUNK. The
point I was making was simply that even a multiple
choice test is sufficient a barrier to keep 99%
of the population from even considering becoming a ham...
that said, the statement does not then lead to any
position or support by me of ending written
testing.

Cheers,

If you are doing this research project within the scope of your paid position, then you DO have a pecuniary interest, and Amateur Radio is not an appropriate communications medium.

There's no AM tower in Santa Clara (or at least none in the last 40
years that I know of), let alone one that meets that description.
There's one in Palo Alto (1220 kHz) and yes, it has the standard
120-radial ground system. The ground there isn't all -that- wet.

In "the good old days" the radials were 8 AWG copper, but after
several stations got their ground systems torn out by thieves who
sold the copper on the scrap metal market, almost everybody replaced
them with 8 AWG Copperweld, which has the same rf electrical
properties but has no value on the scrap metal market.

> I haven't ever seen AM towers with salt marsh surrounding it,

There are several other AM stations in the Bay Area whose antenna
arrays are located right at the water line. In those cases, the
radials go out from the base and into the Bay, which is tidal.

> but in that case they sure would put out a much better signal than a
> tower located away on dry rocky ground with all the buried radials.

The ground system and conductivity are but two elements in the
antenna efficiency. Other factors are the electrical height and the
spacing and phasing of elements in a directive array.

AM antenna design is more of an art than a science.

You forgot to add in the cost of a second phone line for the dial-up
(I keep my LAN on line 24/7), which used to be $26 per month. That
put the cable only ten bucks ahead of the dial-up and the extra
speed sure was worth that.

I might do that some night. I'm not saying I can
copy anything that fast, but not everyone does 20
wpm either.

> But, don't hold your breath waiting on someone
referring to a
> "code key" or sending 73's. You'll be waiting a
very long time.

Maybe, then again maybe not. I've heard the terms
used before by other long time Hams. Just think
about how many times you, and others, probably
used the term "Power" when you really, and to be
technically correct, should have used the term
"Energy". Same idea.

Anyway the comments in this thread have been
interesting to read.

As I knew it always would. I would upgrade my ham license without EVER taking a CW test. Do I wish CW "Exterminated"- No. You old farts need the CW to pass the time away. I do not. Something like a CW test, keeps many good people like me from enjoying the ham bands. This is 2003, not 1955. Alot has changed.

I speak for many people. They feel the same way I do. We want the CW requirement dropped SOON. I can live with taking a written test(s) to get my HF.

I will be e-mailing my ARRL section manager soon. We will get the code dropped. Then on to bigger things.

Not by KFS/KPH, though. AT&T closed their SF HF station (KMI) a
couple of years ago so I don't know who is furnishing that service
now. It may be ARINC (Aeronautical Radio, Inc) which is big in HF
SSB. I'll try to find out.

>Also in-flight comms over oceans are done with HF.

That's ARINC.

It can be cheap, though. It costs me $ 10/mo for regular PPP (no ads, no
weird extra software required). You have to shop around to get connected
for that price, but I haven't seen a high speed connection for less than $
35/mo.

>
I agree 100%. I'd go one step farther - eliminating it reduces the FCC's admin
work, so they have a reason to get rid of it.

>TPT> As far as I'm concerned, it should have happened years ago.
>
>N2EY> Why? Hams still use code. It's very popular.
>
TPT>I would even just say "Hams use code".

I just got off 40 meters. CW QSOs from the low end of the band to up above 7050, whcih is as far as I listened. Even though there's lots of QRN tonight, things are jumping. Worked a guy at a campsite in NH near Franconia Notch running 25 W to a dipole.

TPT>But hams use AM, and RTTY, and
>PSK, and FSK and yes, even phone. Some of us like satellites.

Sure - but except for FM and SSB voice, all of those modes are far less popular on HF/MF than CW. None of those modes require that the user learn a new skill in order to use them.

TPT>Should
>you have to prove that you're capable of tracking and hearing UO-14
>before being granted a license to transmit on 145.975 MHz?

Might not be a bad idea, if satellites were as popular on 2 as CW is on HF.

TPT>Or that you
>know all 26 phonetics and how to locate your grid square (a useful item
>for a VHF+ operator to know)

I'd say the phonetics, definitely. Grid square, maybe.
>
TPT>CW is the only mode that is -required-.

You mean the only mode where it's necessary to demonstrate an operating skill at a very basic level. That's certainly true - but there's no way to test Morse skill with a purely written test.

TPT>Sure, even hams who
>never use RTTY had to answer written questions about it... but the
>difference is, you don't have to get all written questions correct.

True - but then again, you don't know how many RTTY questions will be on the test you get. All it takes is one too many wrong answers and you flunk the written.

TPT>A
>person can become at least a General, if not an Extra, without ever
>answering a question about RTTY... just skip them, and make sure you
>know the rest of the material.

Ah, but that means learning stuff about other things you may never use.
>
TPT>The end of code testing does not mean the end of CW, nor should it.

Not as long as there are folks like me using it.

TPT> But
>as far as I'm concerned, CW is just another mode, albeit one with a
>certain history and artistry to it.

Have you ever really tried it?

N2EY> With regards to testing, it should
>have about as much importance as the rest of the modes (i.e. a handful
>of questions in the pool, and perhaps a reference in the questions on
>frequency allocations, nothing more, nothing less)

But it's far more popular than any HF mode except SSB. Does it make sense to
have as many CW questions on the test as, say, PACTOR questions, when CW is at
least 10 times more used by hams than PACTOR?
>
>N2EY> Learning enough code to pass the test is about as hard as

They're professionals, doing it because it's their job. They have the time, the
resources and the training. Most hams don't, because it's a part-time avocation
for them.
>
>We're doing just the opposite, not entirely with the code test, but with
>the attitude that goes with it.

I don't know what you mean.

I'm an EE, with bachelor's and master's degrees from accredited universities. I was led to EE because of amateur radio, not the other way around. I also build my own ham gear, mostly from scratch with the occasional kit thrown in. I know very few EEs who are also homebrewers.
>
TPT>I'd love for some of the current high-tech talent to bring their
>knowledge into the Amateur HF arena. We've seen what happens when we
>bring them into VHF (I'm thinking about APRS, WSJT/JT44, lots of
>software DSP stuff).
>
But if you check into who designed and promoted all that stuff, again and again it turns out to be hams who are code-tested.

TPT>But to do that, we need to change. By telling a 22 year old
>engineer with a 10-hour a day job and a girlfriend that he needs to
>spend "just an hour a day" sitting and listening to code on headphones
>for the next month, we are essentially telling him to get lost.

I disagree!

For one thing, it takes perhaps 20-30 minutes a day for 30 days to learn enough code to pass the test - not an hour a day. For another, if said person hasn't got the time to study for the test, when's that person going to have the time to use the license?

I was once one of those 22 year old engineers, btw. Now I'm a 49 year old engineer.

TPT>He
>won't have that kind of free time until he's retired.

Then he better not have any kids, get married, or buy a house.

TPT> Plus he's got
>other methods of global communication, so the overall gee-whiz factor of

>would work.

I have to disagree with this characterization of engineers, as if we're all alike.
>
>
TPT>There was a time when children were frequently exposed to ham radio, but
>those days are past. Not every EE graduate has a dipole in his attic
>anymore. The fact is, if the kids and the geeks aren't joining us...
>something's wrong, and maybe we should fix it.

I think you've got it backwards. Ham radio led a lot of people to EE, not the other way around. Look at many famous engineers, and you often find they were hams long before they became engineers.

>
TPT>I think that it's time for us to grow up, evolve with the times, welcome
>newcomers into our ranks, and continue furthering the radio art.
>
OK, fine - exactly how is that going to happen? I predict the code test will be gone very soon after the Senate ratifies the new treaty. In fact, I predict that there won't be an NPRM, comments, etc., just a Memorandum Opinion and Order from FCC saying, in effect, "we argued this back in 98-99 and again in 2000 and now we're just finishing the job that was delayed by the old treaty" Bye bye code test.

Now, what else has to change?

73 de Jim, N2EY

OK . . .

> There were also two other private sector "experts" on the US Delegation
> for Agenda Item 1.7 ... Paul Rinaldo and Jonathan Siverling of the ARRL.

There's a couple more internationally well known ham radio power
brokers. Who the hell are Rinaldo and Silverling?? Never mind, don't
bother . .

> (However, before anyone "flames" ARRL for not retaining the Morse
> requirement in the ITU Radio Regs, I would remind them of two things:
> 1) the IARU postion was that that requirement should go
> 2) members of the US Delegation are *bound* to support the US position,
> which was also that the Morse requirement should go.)

Making the point to having this squad of "experts" on hand in Geneva
moot before the conclave even it got off the ground eh?

I find enormous humor in *you* of all people floating around Geneva
posing as an "private sector expert" in the testing and use of Morse

in ham radio in the U.S. Sez it all.

> Interestingly, when the US presented its Proposal on 1.7 at the CITEL
> meeting in Mexico City last year, the FCC International Bureau rep asked
> me to present the document in Plenary (I was also attending that meeting
> as a member of the US Delegation) ... I asked him "Why me, not you?"
> His response was "You know more about the issue and the background."

That's worse than appalling. One more chunk of evidence that the FCC has been seriously dumbed down and is dragging ham radio down with it. Phil is right.

But the FCC is apparently still smart enough to use tools of convenience to support it's own agenda. That's all you've been since the gitgo Carl, an FCC tool.

At no point has eliminating the code tests ever had anything to do with "modernizing" ham radio, "outdated modes", "taking ham radio into the 21st century" or any of the rest of transparent bullshit which has been touted as the rationales for eliminating the code tests Carl. This whole flap has been based on the "need" for the FCC to bail away from the labor (cost) associated with governing the code tests, dealing with waivers, the VEs on code test issues, etc. and nothing more.

You stuck your head up as a "leading proponent" of the FCC's agenda so they seized the opportunity and paraded you around the assorted conferences which have dealt with S25.5 as an "expert". . You've simply been used as a expendable tool Carl and that's all you've been. They basically made an ass of you. It's done all the time.

Let's see how your "clout" holds up when you weigh in on BPL. You being a self-proclaimed "expert" on wideband wireless technologies.

> What can I say? I participated in the process ... I don't recall you as
> having
> participated in any of the US WRC prep meetings, Brian

No kidding! Do you think the FCC or the ARRL would have wanted me espousing MY position on S25.5?

... nor did I see you
> listed as a member of the US Delegation to the WRC.

Spare me, nail your WRC 2003 Delegate "appointment" to yer shack wall along with all the rest of your ham radio achievement awards. Whatta hero.

By the way who paid yer air fare to Geneva? You? NCI? The FCC? Thought so. Otherwise you wouldn't have been there huh?

Back to Genesis here Tool: The NCI mission statement has been the elimination of S25.5. Ya blew it, S25.5 lives on. Now what?

So, in other words you're not looking for independent opinions at all (as per you original posting) because you've already made up your mind that the BPL is a valid issue and anyone who disagrees with you is a simp. Sorry Zoran, some people wont throw their hard earned money at an issue just because you say they should..........

My god, do I actually have to explain this: The Amateur portion of the HF spectrum is not even 1/6 of the total spectrum. The remainder is controlled by COMMERCIAL and GOVERNMENT interests that have a hell of a lot more to lose with BPL's than amateurs ever will. Do actually believe that the ARRL is going to be the sole group that will rescue the bands from these evil power companies? Get real Zoran.

If you cant take someone disagreeing with you, try arguing in front of a mirror.

But only AFTER that adverse decision had actually been made, right? In
the BPL case, it seems to me, such a move would only be advisable if
FCC decided to authorize uncontrolled BPL in ways that were sure to
cause massive interference, AND turned down petitions for
recosideration.

Bill, welp, I brought out the fine-toothed comb and swept it through the citation. Nowhere did I pick up the words "reduced technical material" or anything remotely like it. Exams that "Rationally and Directly relate to priveleges" could be quite difficult, making some of these long-time hams glad that retesting isn't required every 10 years.

It is a PCTA ploy that they continue to cry for no exams. Since we won't let them take their ball and go home, they want to damage the ARS for all. They're tring to scuttle the ship rather than let it fall into unworthy hands.

They all wanted to be extra's. In their own
notions an extra class callsign really conveyed
some sort of accomplishment. I bet that most
of them are NOT contesting. Ones that can do
20 WPM code and above with an extra call before
restructuring are more likely to be contestors
than 5 WPM extras of today IMHO.

>
> (my emphasis
>
added)_____
> _______

Arnie ... I think you read FAR too much in to the words you emphasized
above.
(I take you at your word that the quotes are accurate ... I haven't bothered
to
check against the NCI filings because the language looks familiar and I
don't think
you'd "fiddle" with the words ... only that you seem to misinterpret their
meaning.)

In the first paragraph ... what's wrong with the test requirements
"rationally and
directly relating to the privileged the licensee receives by virtue of
passing the test" ???
This does NOT mean "weaken the test" ... it means "make the test fit the
privs" ...

which COULD result in a tougher test (or changed privs) ... my favorite example
(though the FCC didn't do it) would be what I view as the disparity between the
technical knowledge required in the Tech test vs. the 1500W power limit at the
frequencies authorized.

As far as the second paragraph goes, the study guides ARE revised as the QPC
updates question pools ... which they are, IIRC correctly, required to do periodically
to make sure the tests cover "the right stuff." And again, "reasonable tests for the three
new classes of license contemplated ..." does NOT imply "weaker" tests ... the tests
need to be reasonable (i.e., up to date, comprehensive enough to meet the FCC's
legitimate regulatory purposes, yet not so onerously tough that they present an
unreasonable barrier to folks who are not technical professionals in the radio field.

> First, I was never a PCTA ... and you know that. But that aside, above are
> the quotes from the reply comments of NCI to the NPRM. Of course, they
> don't come out and directly say it, but it is clear where they are going
> with this.

You're reading more into the comments than they meant ... it is NOT "clear"
that NCI is/was/will ever promote "no test" ... we have stated publicly MANY
times that that is not the case. And those NCI directors who participate here
from time to time have specifically stated that we would NEVER support
such a direction, but would rather fight HARD against it.

Finally, there are other passages in NCI's comments in that Proceeding
that you don't mention ... for example, ARRL wanted to grandfather
certain licensees who had not taken all of the prescribed written elements
to General, as I recall. NCI's position was "no freebies, they should have
to take the additional written elements to upgrade." Does THAT sound
like we have a "No Test Agenda" ???

> Now, add to that, the comment from an NCI Director -- "Just
> having a test...any test, serves as a barrier to millions of people. That
> an actual learning effort is required (even if it is straight memorization)
> will continue to act as a barrier for 99% or more of the population." - Bill
> Sohl, NCI Director, 02/01/97 on this NG.

That is not an advocacy for eliminating testing ... just a simple statement of

opinion ... if it said "a large proportion of the population" instead of speculating
on a specific number (99%), I'd say it was a statement of fact.
There are many people who have no interest in ham radio and, for them, ANY test is a barrier ... but again, I am QUITE sure that Bill was not in any way
advocating the wholesale elmination of amateur testing.

> So? CB, even then, had NO testing to get that license.

And now there is not even that....

Look, I seriously doubt that there will ever come a time when there is
no test at all. We would probably lose the spectrum allotment before
that happens. That is just some slippery slope stuff.

But I have NO doubt whatsoever that there will be pressure to simplify
and reduce the difficulty of the testing process. Its all conjecture, so
we'll just have to wait and see.

Well Arnie, nice of you to take my text out of context. You try to imply by my stating the obvious, that I am saying we should end tests and that is BUNK. The point I was making was simply that even a multiple choice test is sufficient a barrier to keep 99% of the population from even considering becoming a ham... that said, the statement does not then lead to any position or support by me of ending written testing.

"Not so fast there, Brian. NCI has been on the record as saying that the tests should be made less technical. Not a far leap at all to presume they will try and "dumb" them down even more." - Arnie (7-8-2003)

Once again, I have been accused of saying that NCI wants to END testing. Never said it. BRIAN said it, then tried to attribute it to me. What I said (above) and stand by, is that NCI is in favor of less technical tests. They would favor written tests that concentrate more on rules and operating skills and less on knowing the alpha of a bipolar transistor.

Your ignorance of amateur radio regulatory matters never ceases to
amaze me, Brian ...

Actually, Paul Rinaldo spends a great deal of time in Geneva representing
ARRL at the ITU-R. And when he's stateside, I frequently run into him
in the halls of the FCC.

Jonathan Siverling also works for ARRL in the DC office ... he's a
"Chapter Coordinator" in CITEL and also does ITU-R work. Jon
was the "country outreach coordinator" for the Americas, due to his
CITEL experience/contacts and ability to speak Spanish. (I was
assigned several Latin American countries to work with because I
also speak Spanish pretty well and know delegates from Latin America
from my participatin in CITEL, and I also participated in the US review
of the Spanish translation of some documents from the editorial
committee to make sure the Spanish version was consistent with
the English text ... found some misuse of verbs that we had to have
corrected because they changed the meaning in the Spanish version.)

> moot before the conclave even it got off the ground eh?

Not really ... the WRC is a VERY complex activity, involving both
technical and political considerations ... sometimes when there are
contentious issues, some "horse trading" goes on behind the scenes.
USG relies on Private Sector Advisors to help develop the strategies
and fallbacks and "talking points" that are used to lobby other delegations
to achieve the delegation's goals ... sometimes it means "giving" a little
on
an issue that's important to another delegation (or group of delegations),
where you have some flexibility, in order to obtain their support on some
other issue that is important to the US. In such cases, the USG folks
consult with the private sector advisors on things like "What can your
constituency live with?" so that they know how much they can "flex"
without hurting US private sector interests. They also often "assign"
private
sector advisors to "work the floor," lobbying other delegations (within
the bounds of the US position) for support (in many cases, the private
sector advisors know and have good relations with members of other
delegations that can be used to the Delegation's advantage in achieving
its overall goals.)

> I find enormous humor in *you* of all people floating around Geneva
> posing as an "private sector expert" in the testing and use of Morse
> in ham radio in the U.S. Sez it all.

I fail to find the humor ... it must be you. Having been licensed for
over 25 years, having learned Morse, passed a test (albeit 5 wpm,
but my skill increased as I *used* it in the early days), then losing
interest in using Morse, seeing Morse keep many of my engineering
colleagues from becoming hams over the years, and being involved
in this issue for a number of years, both before the FCC and in the
WRC prep process, I knew all the background, the issues, the US

position, etc. I also knew the postions of many/most other
administrations and regional groups. What's so funny about that?

> > Interestingly, when the US presented its Proposal on 1.7 at the CITEL

> > His response was "You know more about the issue and the background."
>
> That's worse than appalling. One more chunk of evidence that the FCC
> has been seriously dumbed down and is dragging ham radio down with it.

It's not reasonable to expect a single VERY high level person from the FCC
to know every detail of every agenda item ... their job at such meetings
is to rely on the lower level staffers and private sector experts,
overseeing things
to make sure everyone's doing their jobs, and (frankly) to do some high
level
"shmoozing" with important people on other delegations to help "grease the
skids" a bit.

It is not uncommon for a private sector member of delegation to be
tasked to present a document that he/she has been intimately involved
in crafting.

> But the FCC is apparently still smart enough to use tools of
> convenience to support it's own agenda. That's all you've been since
> the gitgo Carl, an FCC tool.

Attempt to disparage if you must, but it's simply not accurate.
The US position on most WRC agenda items was VERY substantially
driven by the private sector (the FCC's constituency) ... of course
the result had to be acceptable to NTIA, representing DoD and other
USG users of the spectrum, and to the State Dept. as well, but the
bulk of the prep committees that developed position papers, talking
points, strategies and fallbacks, etc. consisted of representatives from
the private sector.

This was, IMHO, truly an example of good governance ... the govt.
REALLY listened to those who actually use the spectrum and took
their technology, spectrum needs, etc. into account.

> At no point has eliminating the code tests ever had anything to do

> from the labor (cost) associated with governing the code tests,
> dealing with waivers, the VEs on code test issues, etc. and nothing
> more.

Under the VE system, code testing essentially costs the FCC zilch ...
there are no waivers, the VEs do the work ... where's the beef?

> > What can I say? I participated in the process ... I don't recall you as
> > having
> > participated in any of the US WRC prep meetings, Brian
>
> No kidding! Do you think the FCC or the ARRL would have wanted me
> espousing MY position on S25.5?

The process is open to all interested parties ... under the law you have
a right to participate. If you don't, then don't carp about the outcome.

> By the way who paid yer air fare to Geneva? You? NCI? The FCC? Thought
> so. Otherwise you wouldn't have been there huh?

Not that it's REALLY your business, but my employer paid my travel
expenses ... I was also there to follow two agenda items that were
important to my employer (non-ham stuff, of course).

ARRL paid the expenses for their reps ... IARU probably paid those
for Dave Sumner and the other IARU observers.

Again, where's the beef?

> Back to Genesis here Tool: The NCI mission statement has been the
> elimination of S25.5. Ya blew it, S25.5 lives on. Now what?

Actually, your statement is not correct. The NCI mission statement
makes NO mention of S25.5 ... (see the web page ... that text hasn't
changed in the time I've been Exectutive Director of NCI ...

You are also wrong that "I(we) blew it." The mandatory Morse requirement
in the ITU Radio Regs ceased to exist July 5, 2003 ... the new language of
S25.5 has EXACTLY the same effect as if S25.5 had been "suppressed"
(eliminated entirely) ... it states that administrations have the right to
decide if
Morse testing will be a part of their national requirements. (In the
absence
of a mandatory requirement, soverign nations ALWAYS have the right to
choose to have a requirement (or not) in their national rules, whether it's
said
so explicitly in the Radio Regs or not. Similarly, if the Radio Regs were
to
say, for example, "Stations in the Amateur Radio Service shall not employ
transmitter output powers in excess of 1500W PEP." that would NOT preclude
an administration from enacting a national rules limit lower than 1500W PEP.
However, an administration could not enact national rules permitting a power
limit greater than 1500W PEP without being in derrogation of the Radio
Regs.)

The Morse requirement is GONE from the ITU Radio Regs ... administrations
are free to drop Morse testing (many are planning to do so with surprising
rapidity ... we in the US are used to government moving slowly, so the speed
with which some administratons plan to allow access to HF by no-code hams
seems surprising to us ...)

These are facts that you can't change, so I suggest you simply learn to live with them.

73,
Carl - wk3c

Last time I flew to Seattle aboard a 757 I stuck my GPS up to the window and
read out the aircraft speed....526MPH.
Seems like they could use a more upscale comm system aboard planes when such
technology is that common.

Bill, welp, I brought out the fine-toothed comb and swept it through the citation. Nowhere did I pick up the words "reduced technical material" or anything remotely like it. Exams that "Rationally and Directly relate to priveleges" could be quite difficult, making some of these long-time hams glad that retesting isn't required every 10 years. It is a PCTA ploy that they continue to cry for no exams. Since we won't let them take their ball and go home, they want to damage the ARS for all. They're tring to scuttle the ship rather than let it fall into unworthy hands.

"This will permit a practical combination of existing study guides and testing materials to be used until such time as such materials are REVISED and will result in REASONABLE tests for the three new classes of license contemplated in these comments."

First, please show me where I said that NCI wants to END testing. You can't because I never said it. Second, please explain what "revised" and "reasonable" mean within the context of the above quote from NCI? (that you conveniently snipped from my answer) Does it mean that NCI wants to make the test MORE difficult? Even a blind man could see where this is going.

You forgot to add in the cost of a second phone line for the dial-up (I keep my LAN on line 24/7), which used to be $26 per month. That put the cable only ten bucks ahead of the dial-up and the extra speed sure was worth that.

I don't use a second line for my modem. I have online answering, so if I "really" want to take the call I will. That said, I was never all that impressed with the difference in speed -- other than for downloads. Regular surfing, NGs etc are close to the same for my system.

Yup - which is 99% of what US hams care about, anyway.

> And, as you note above, USA ratification is just a matter of time.

As Carl/WK3C predicted, the whole deal was/is a "slam dunk". Really
just a matter of waiting for the various bureaucratic gears to turn.
I'm predicting that there won't even be an NPRM or NOI on eliminating
the code test, just a neat little MO&O from FCC very soon after the
treaty is ratified. Bye bye Element 1, game over, thank you for
playing. Or maybe FCC will tack it onto the R&O for the petition to
refarm the Novice/Tech+ subbands. Would be ironic as heck: "No more
code tests, Novices and Techs get lots more HF access on 80, 40 and 15
- but they can only use CW/Morse on those bands". Stranger things have
happened.

--

Stuff like code tests, written tests, technical competence, appliance
operating, hi-fi-ssb and license numbers are all red herrings compared

to the real threats to amateur radio, like BPL, CC&Rs, and
enforcement. Those real threats are where we have to focus our
resources and efforts. What good are licenses, tests and technical
competence out the ying-yang if you can't put up a decent antenna for
any band, and the antennas you *can* put up hear nothing but noise?

I can visualize this phase being a real nit-picking and repositioning
exercise, perhaps a source of fodder for appeals.

What's the relationship between an NOI and an NPRM? Doesn't the FCC
eventually have to publish an NPRM and go thru the whole comments and
rebuttals drill again?

It may be conjecture but it sure is supported by history, both in the long and
particularily the short terms.

That the NCI mavens can't understand that shows the extent of their myopia.

Hi Dick,

It's a matter of economics and regulation more than design, but also
about design.

Electronic gear in the air must meet stringent considerations. These
are based on the simple fact of weight and power consumed. There is a
heat budget to meet, there is a power budget to meet, and there is a
physical volume budget to meet. Equipment must be designed to
co-exist with other equipment (they share the same heat vent, thus the
heat budget). There is also legacy systems to consider and to
interface to. The flight controllers had or have been using tube
equipment (no, not just their screens, some computers).

Much of this is probably already anticipated by state of the art
designs (except for the packaging). Heat and power issues are by and
large far less imposing than older stuff, but packaging still must
conform to other equipment that has no "modern" replacement.

Then back to the economics and regulation. ARINC places stringent
requirements that are by and large stringent in the top loading of
engineering time. That is, it takes a cadre of support personnel to
research and cross-correlate all the various issues demanded to find
its way into a product. When I designed the flight recorder, it was
to MIL-SPEC 883B which is no regulatory slouch. How much do you think
your HF rig would cost against such a standard? $30K would be a good
place to start. Then there is the retro-fit cost to meet the new
system. Abandoning HF for satellite means air and ground systems must
change to follow the trend (it is only a trend after-all) and this ups
the ante such that a large cadre of support people must be
co-ordinated to follow to a long-term schedule of mods and upgrades
(the schedule, in turn, having taken a couple of years to fashion).
Even changing the antenna type to follow the migration from HF to SHF

impacts the air frame and issues of flight safety. This may seem absurd on the basis of civil aviation which can opt into some gear, but commercial aviation must be done across the board.

I await the influx of all these engineers and the advances they will
bring Amateur Radio.

Did anyone seriously say they were really interested in Ham radio, but
the Morse Code test kept them out? just har dto imagine that someone
really interested would do that.

Not to disagree with your point Paul, but the part that makes me uneasy is the
fact that government may wind up with little or no choice because of the
big $$$$$ politicos who seem to be able to buy their way into most anything
given the right connections to the right....well, you get the point.

But the ARRL sure won't be able to stymie that fact, either, with or without
our
piddling amateur contributions. Only knowledgable, responsiple people in the
right places -with the intestinal fortitude to hang tough and fight the $$$$
flow-
will be able to head off this impending HF disaster. I have no idea if such
individuals in such places even exist today.

Since we have all this in one place now, just exactly is meant by that
statement?

REVISION means a change, obviously. It happens from time to time.

REASONABLE tests mean what?

You could poll 10 people and get 10 different answers. running from
virtually no esting to those who believe that the test process should
require the equivalent of a Bachelor's in EE. Reasonable means different
things to different people.

That quote is exceptionaly vague. Witness people here with different
interpretations.

Here is a golden chance for NCI to clarify and say *exactly* what they
mean. What is reasonable testing for the ARS?

Hi Paul,

Given the poor service rendered by the present administration across
the board, it takes very little attention to recent FCC events to
observe their wholesale indifference to the consequences of their own
brand of one-answer-fits-all.

To expect that the other 5/6'ths of those affected will rescue this
mis-step is dreaming in technicolor and surround sound. Those who
might be affected will simply exercise their right to veto local
implementation. Follow the money, there are one or two principals
involved and their legislation and regulation has been paid for. The
sad fact of the matter is that the current administration employs the
balkanization of issues so that no single community has clout against
the indifferent neighborhood. The FCC has attempted to consolidate
the commercial market through the abandonment of serving community
needs. They entirely ignored every comment that rejected this path;
the people had to go to Congress to reverse this attitude. Those same
aggrieved are wholly unaware of this new plight, and lacking their
motivation, it will be a tougher hill for us to climb. I saw little
discussion in this regard of consolidation, even though we watch the
FCC closely which is to say we were just as indifferent, as a
community, to this plight of community service. The simple fact of it
is that our ox is being gored (we are not all that concerned about
public service as we are about having fun). To put it bluntly, your
neighbor will simply shrug off your problem and suggest you go to
Radio Shack for one of those filter thingies - you may note the hint
of an ironic smile offered.

For those who have NOT read the NOI, the FCC has carefully couched
this BPL in the jingo of Homeland Security (sic) and describes this
expressly as part of the solution of "the last mile problem"
something I have already described in past posts.

Getting real means climbing out of the grave already dug before they throw in the dirt.

WRC-03: GOOD NEWS FOR HAM RADIO - BAD NEWS FOR SUPPORTERS OF CW

The 2003 World Radiocommunications Conference in Geneva is over and there is some generally good news for ham radio. Q-News Graham Kemp, VK4BB, has been following this story and has a complete wrap up on the way that amateur radio fared:

--

The 2003 World Radiocommunication Conference concluded its discussions of the issues on its agenda on Thursday afternoon, 3 July, after marathon Plenary sessions that tested the patience and stamina of the conferees. The big news for radio amateurs is that there will be a dramatic improvement for we here in region 3 in regard the 40-meter band!

7100-7200 kHz band reallocated to the amateur service in both region 3 and 1, Region 2 7000-7300 kHz remains exclusively amateur. The change will take effect on 29 March 2009, less than six years from now!

Now the "but".. A footnote containing the names of countries that are mainly in Region 3 and the Arab States makes the band also available to the fixed and mobile services in those countries on a primary basis.

It was not easy to achieve such a positive outcome on this issue. A last-ditch effort to bridge differences was chaired by Alan Ashman of Australia.

Perhaps the magnitude of what has been accomplished for radio amateurs can best be explained this way: Never before in the history of radiocommunication has an HF broadcasting band been shifted to accommodate the needs of another service. This is not simply an accomplishment of the IARU. It would not have been possible without the cooperation of a number of broadcasters and many, many others. The people who worked with us who are not radio amateurs -- including some who were strongly opposed at the start but who acceded to the compromise --deserve much of the credit. For example, Australia came to the conference

with a strong "no change" position and had to shift its position dramatically in order to embrace the compromise.

Agenda item 1.7.1 (Article 25): A package of revisions to the international Radio Regulations that are specific to the amateur and amateur-satellite services, takes effect on Saturday, 5 July 2003. Michael Owen, VK3KI, has guided the work of IARU on this issue since 1996.

Agenda item 1.7.2 (Article 19): 432-438 MHz secondary allocation for satellite-borne synthetic aperture radars was approved in Plenary.

Agenda item 1.1 (footnotes): "Footnote fever" seized some administrations in the closing hours of the conference. Fortunately, the amateur service escaped serious damage from "footnote fever" although it may be a problem in the future if countries want to climb into the footnote for fixed and mobile at 7100-7200 kHz.

As Secretary David, K1ZZ said in wrapping up his report... "It's Over! Well, the work is over; the ceremonial closing of the Conference will occur on Friday afternoon, 4 July. Then we will
all be heading home, except for those who are staying for a two- day meeting to plan the preparatory work for WRC-07.

Yes, it's all beginning again...."

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.
--

There are two very important documents that came out of WRC 03 that every radio amateur should read. Both were issued at the close of the conference by the International Amateur Radio Union. The first is a final wrap up on the conference by Dave Sumner, K1ZZ. The other is an in-depth explanation of the changes to the worlds radio regulations authored by Michael Owen, VK3KI. You will find links to both of them on the front page of out website at www.arnewsline.org (Q-News, IARU, ARRL, WIA, others)

**

60 METERS: A LOOK AT NIGHT ONE ON THE NEW GENTLEMENS BAND

Its being called the “New Gentlemans Band” by some. At least thats what monitoring the first availability of the new 60 meter band as it opened to the East Coast on July 3rd. Newsline’s Don Wilbanks, was listening in from the deep South:

--
The ‘New Gentlemens Band” may well be a title that will stick on 60 meters. Even as the new frequencies came to life, there was none of the on-air pushing and shoving thats so prevelant on other bands like 20 and 40 meters. Instead, those observing, operating and posting thir thoughts to the Internet seemed to agree that calm and order was the way most approached 60 meter operation.

Ron Wray, WB5HZ, was one of those listening in. He says over the qrz.com website that it seemed as if someone had kicked an anthill at 11:00 PM Central time. That’s when hundreds of stations were conducting simultaneous QSO’s on all five frequencies.

According to Wray, there were explosions of activity that continued throughout the night as each time zone jumped onto the new band in sequence. And Wray notes the apparent success of the 50 watt effective radiated power limit. He says that from his location in Dear Park Texas, the low power limit made it so that no one signal was sufficiently strong to completely control any particular frequency. And because of this amateurs were able to make solid contacts despite the unbelievable level of QRM.

Robert Harper, AFZ0H, of Park Hills Missouri was another early user of 60 meters. In his posting to QRZ, Harper said that he was very impressed by the discipline of the amateur community on opening night. Despite the noise and the crowd, everyone seemed to keep a level head. He says that it was an atmosphere that reminded him of the "good ol' days," adding that he cannot recall when he last observed such gentlemanly behavior under such crowded conditions.

And Bill Collins K8NQC, may have summed it up best. In his QRZ note he said that multiple QSO's on the same frequency will greatly help the utility of the band. He adds that the absence of big signals is really a plus.

For the Amateur Radio Newsline, I’m Don Wilbanks, AE5DW, in New Orleans,

--

So far there seem to be no complaints about the new spot frequencies that comprise the current 60 meter ham radio allocation. In fact, one ham was heard to say that the rest of high frequency Amateur Radio can learn lessons in sportsmanship and courtesy by simply tuning in. (ARNewsline(tm), from QRZ.com and other sources)

**

RADIO RULES: ANTI-ENHANCED SSB PETITION ASSIGNED RM 10740

Its taken some time, but the FCC has now assigned the designation RM 10740 to the petition by Michael Lonneke, W0YR, of Round Hill, Virginia, and Melvin Ladisky, W6FDR, of Camarillo, California to limit the bandwidth of Single Sideband an full carrier ampletude modulated signals on all ham bands below 28 MHz. As previously reported, W0YR and W6FDR want SSB signals to be limited to 2.8 Kilohertz and AM to be no wider than 5.6 kilohertz.

The petitioners make no secret that their regulastory request is aimed squarely at those hams who are experimenting with enhanced SSB signals which are wider than the 2.8 kilohertz that they believe should be the maximum bandwidth. They claim that enhanced SSB is bothersome to other operations and that some users of the pseudo mode are unwilling to cooperate in minimizing harm being caused.

What Lonneke and Ladisky have not bothered to explain is why they also targeted users of AM whom even they they freely admit are not causing a problem for other radio amateurs.

Either way, RM 10740 carries a commentary cutoff date of August 2nd. You can let the agency know how you feel by submitting commentary by mail or using the FCC's Electronic Comment Filing System. It'sated in cyberspace at www.fcc.gov. Once there use the websites search function to locate RM 10740. (ARNewsline(tm))

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WO1E repeater serving Templeton Massachusettes.

(5 sec pause here)

**

YHOTY 2003: JAY THOMPSON, W6JAY, NAMED ARNEWSLINE(tm) YOUNG HAM OF THE YEAR

He is not yet 18, but he is a champion class hidden transmitter hunter as well as a young ham devoted to public service and to bringing more kids into the hobby. And for these reasons and more, a select committee of judges has named Jay Thompson, W6JAY, of Santa Ana California to receive the 2003 Amateur Radio Newsline Young Ham of the Year Award. We have more in this report:

--

If the name Jay Thompson and the call sign W6JAY sound familiar, its because Jay has made news several times in the world of hidden transmitter hunting. In the five years that he has been licensed, W6JAY has participated in three championship hunts has won virtually every type of medal offered in his age group. One hunt took him all the way to China. And when you travel the world, hidden transmitter hunting can leave you with moments to remember:

--

Thompson: "In China it was raining. And in the bamboo forest, when you shook the trees, you would get a mini-shower fall on you and it would just cool you off after you had been running for a while."

--

But his exploits in T-hunting is not the only reason that Jay was chosen as this years Young Ham of the Year. He is also heavily involved in emergency communications and is a member of the Orange County Hospital Disaster Emergency Communications System. This is a medical communications support group that gave W6JAY his first taste of what responding to a real emergency is like:

--

Thompson: "During the Plecencia Linda train crash I was stationed at a hospital with my dad where we helped to allocate information where patients were going. That helped the hospitals a lot from what I heard."

--

If Jay Thompson sounds enthusiastic about his T-hunting and emergency communications work, you have to hear what he has to say about recruiting youngsters into the hobby. Jay believes that the future of ham radio is with the young:

--

Thompson: “I noticed that there were not very many active young Amateur Radio operators, so I have tried to do my part to get more of them in so that Amateur Radio can have a better future. It starts with the kids and as they grow up they realize that it is such a good activity and will get more people to join. If there are not any kids, then there is not very much of a future for Amateur Radio.”

--

A lot of people seem to agree. In fact ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, calls Jay Thompson: “...a magnet for other young hams to become actively involved in the Amateur service.”

The Young Ham of the Year program is co sponsored by the Amateur Radio Newsline, Vertex Standard which manufactures Yaesu brand ham radio gear and C-Q Magazine. Jay Thompson, W6JAY, will receive his award at a presentation on Saturday August 16th at the Huntsville Hamfest in Alabama.

Right now we ask you to join us in congratulating Jay Thompson, W6JAY, as he is named 2003 Young Ham of the Year.

For the Amateur Radio Newsline, I’m Mark Abramowicz, NT3V, reporting.

--

2003 marks the 17th consecutive year that the award has been presented. (ARNewsline(tm))

**

ENFORCEMENT: FCC ACTS IN THREE CASES

The FCC has contacted three hams on various enforcement matters. The agency’s Daryl Duckworth, NN0W, has more:

--
Audio report only. Hear it at www.arnewsline.org
--

According to Duckworth, that’s the FCC’s enforcement actions through the period ending June 28th. (RAIN, FCC)

**

RESCUE RADIO: PERSONAL LOCATOR BEACONS NOW LEGALLY SOLD IN LOWER 48

Hams could have a new emergency communications job in the near future. T-Hunting down people in distress wearing Personal Locator Beacons.

The CGC Communicator reports that retail stores in the continental United States are now being allowed market the pricey beacon transmitters which can be activated when a person is in a dangerous situation. Proponents of Personal Locator Beacons claim that they will assist rescue teams in finding lost persons in emergency situations.

According to CGC, each beacon must be registered with NOAA before alert activations can be relayed via satellite to the Air Force Rescue Coordination Center at Langley Air Force Base in Virginia. Actual beacon alerts are recieved over the SARSAT COSPAS satellite system which is a long term cooperative effort between the United States and Russia.

More information is on line at www.sarsat.noaa.gov (CGC)

**

RESCUE RADIO: THE DEAN OF ARRL SECTION MANAGERS RETIRES

The dean of ARRL Section Managers, New Mexico's Joe Knight, W5PDY, stepped down from his post on July 2nd. Knight cited poor health in his decision to retire from the volunteer position after serving for nearly 27 years. This is a record of volunteer service longer than any other sitting SM.

Assistant Section Manager Bill Weatherford, KM5FT, of Albuquerque, has been named to fill the remainder of Knight's term, which ends on December 31st. In his departure statement Knight said that he plans to try to help Weatherford as much as he can to assume the Sectiin Managers job. He also thanked his constituancy for the wonderful job that they have done and asked that they support KM5FT in the same way as they did him.

Knight had recommended Weatherford's appointment as his successor. KM5FT is an ARRL life member and has served as an Assistant Section Manager for the past two years. (ARRL)

**

ACCIDENTS HAPPEN: OMAHA’S KETV-TV TOWER COLLAPSES

Joe Eisenberg, K0NEB reports that a broadcast tower being converted for digital television has fallen in Omaha Nebraska. According to a story supplied by Joe, KETV's main broadcast antenna fell to the ground Friday July 4th.

Crews had been working to install High Definition TV technology on the tower since May 30. A new antenna was to replace the aging RCA TW-15 skyhook. A station spokesman said that it is not yet clear how much the tower collapse will set back the stations conversion to digital transmission or how long it will take to clear debris and rebuild. Nor is it known what caused the main tower to fall. (K0NEB)

**

RADIO CONFLICT: PENNSYLVANIA TOWN DISCOVERS WATER AND RADIO WAVES DON'T MIX

Officials in Chambersburg, Pennsylvania have asked the FCC to intercede in a dispute between that township and Radio Station WCBG on 1590 kHz. This, s the borough hires a Louisiana attorney to try to force the owners of the radio

station to cease operating long enough for workers to finish a 2-million-gallon water storage tank project in the nearby Chambers-5 Business Park.

Chambersburg's effort to build a new, elevated, 150-foot-high water storage tank on land adjacent to WCBG's towers have stalled because workers complained of receiving RF burns. Complicating the situation are allegations that the storage tank interferes with WCBG's signal, presumably warping its radiation patterns.

WCBG operates 5 kW non-irectional daytime and, 1 kW directional at night. The whole story is on-line at http://tinyurl.com/g1dk (CGC)

**

ARRL: LOOKING FOR MULTIMEDIA PRESENTATIONS AND VIDEOS

The ARRL’s Field and Educational Services is seeking donations of Amateur Radio related presentation programs or slide shows that utilize Microsoft PowerPoint or similar computer-based slide-viewing software. The department is also interested in VHS and digital video programs to add to materials that it offers hams through the ARRL Video Series. For guidelines on whats acceptable contact Mary Lau, N1VH, 225 Main St, Newington, Connecticut 06111 or e-mail herat mlau@arrl.org. (ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: 40 METER DX’ER AL HIX, W8AH, - S.K.

On a sad note, the changing of the guard continues with news that an internationally known dx-er has died. And this news hits very close to this anchor desk. As local hams gathered for field day here in Charleston last month, word was received that Albert Hix, W8AH had become a silent key. Al passed away at his home here in Charleston on June 25. He was 85.

W8AH not only loved amateur radio, he loved his country and the freedom she provides. Al was a skilled member of the US Army signal corps, serving during world war 2 when he was appointed radio officer to General George Patton. He also served during the Korean war and returned to Paris to climb the Eiffel tower again for the daily net with the Pentagon.

After his military service, Al returned to Charleston with his wife and worked as an engineer for Union Carbide until his retirement in 1985. He pursued his beloved hobby with a new vengeance, earning his place on the DXCC honor role with 388 countries confirmed. On 40 meters, he holds the top honors with 362

entries. Al made hundreds of friends around the world through amateur radio, many of them he visited with his wife, Connie.

Avid DX'ers knew one side of Al Hix. Many of us knew another side, as WV ARRL section manager Hal Turley, KC8FS, explains…
--

(KC8FS audio)

--
A US Army chaplain presided during Al's funeral and he was laid to rest with military honors. Meanwhile, local hams seemed to man the field day CW station with a special vigor… and without the traditional W8AH at the key at start time.

(KC8FS audio)_

Al is survived by his charming wife, Connie, brother James and by hundreds of ham friends around the world and here at home in the West Virginia hills… where we knew that the only thing bigger than his signal, was the kind heart of W8AH. (ARNewsline(tm))

**

RADIO PUBLICATIONS: CQ RELEASES HAM RADIO MAGAZINE ANTHOLOGIES

Fans of the old Ham Radio magazine, take note: A new series of anthologies, reprinting selected articles from the pages of ham radio, is now available from the folks at CQ Magazine

The first four books in the series were introduced two weeks ago at the 2003 Dayton Hamvention. The topics covered are: "Antennas, 1968 to1972;" "Antennas, 1973 to 1975;"Homebrewing Techniques" and "Troubleshooting Techniques."

Ham radio magazine was published from 1968 to 1990 and is generally acknowledged as the premier amateur radio technical publication of its time. CQ Communications now owns the rights to Ham Radio magazine and decided to release to compilation books based on requests from the Amateur Radio community. They can be ordered on-line at www.cq-amateur-radio.com. (CQ)

**

CONVENTIONS & HAMFESTS: CINCINNATI IN JULY

On the ham radio social circuit word that the sixth annual OH KY IN Hamfest is slated for Saturday July 26th at the Diamond Oaks Caerrer Development Center in Cincinnati Ohio. The event features a giant outdoor flea market, ham radio test sessions, vendor exhibits, door prizes and lots more. Fur further information e-mail Lynn Ernst at wd8jaw@arrl.net (Via press release)

**

CONVENTIONS & HAMFESTS: DENVER COLORADO IN AUGUST

And the Denver Radio Club Hamfest is scheduled for Sunday, August 17th at the Jefferson County Fairgrounds in Golden Colorado. Doors open at 8:30 AM. For more information contact Bryan Steinberg, KCZ0CUA via e-ail to kcØcua@arrl.net, or via the club website at www.qsl.net/w0tx (Via press release)

**

HAM RADIO IN SPACE: ARISS MARKS SUCCESSFUL EURO SPACE CENTER CONTACT

Another big success for Amateur Radio on the International Space Station. This as U-S Astronaut Ed Lu, operating as NA1SS made contact with youngsters on Space Camp at the Euro Space Center in Belgium at 08:25 U-T-C on Monday July 7th. .

The center operated as ON4ESC with bout 150 children gathered in the auditorium. Some of them were Dutch speaking, others spoke only French speaking and 45 were Americans living in Europe.

Ed Lu answered the call from ON4ESC the very second the ISS was in range of the Euro Space Center. He answered 17 questions during the nearly 8 minutes long pass. At its closest approach, the space outpost was 2000 km south of Belgium, over the Pyrenees mountains. AMSAT Vice Chairman Gaston Bertels, ON4WF, was on hand to oversee the operation as well as introducing the young audience to the amateur radio service, amateur radio satellites and the ham radio stations used by astronauts and cosmonauts while operating from space. (ON4WF)

**

DX

In DX, the question is -- did you work them? Of coarse we are talking about DL6LAU, DL8OBQ, OH2BH, OH2NB and OH3BHL who have been Albania in preparation of setting up a training program to enhance amateur radio in that nation. They have also been on the air as ZA1B operating on several new bands and modes including 6 meters and 2 meters. Their operation was scheduled to conclude on July 13th with QSL’s to be handled together with the April and May ZA1B operation by OH2BH. (OH2BH via N4GN)

Bob Cumming, W2BZY, says that he will be active on 50.110 MHz from Costa Rica TI2 through July 27th. This, in an attempt to activate some of the less common grid square in that nation including EJ79. When not on 6 meters, Bob will be looking for contacts on the high frequency bands. QSL as directed on the air. (VHF Reflector)

Also, look for Desertas Island on the air from July 23rd to the 27th. This as the Madeira DX group activates CT9D and CT9M on RTTY from that rare location. The main purpose of this trip is to mount a VHF repeater on the island to enhance F-M coverage across the Madeira Archiplego. The operators will also be active on SSB, CW and RTTY during their stay. Q-S-L to CS3MAD, P.O.Box 4694 - 9000 Funchal -Ilha da Madeira - Portugal. (OPDX)

THAT FINAL ITEM: MISSING LILLY FOUND

And finally this week, the story of a ham radio operator and his dog. It happened back in January, but only recently was the story forwarded to us. Here’s Amateur Radio Newsline’s Bruce Tennant, K6PZW with the details.

--
Peter Kringle K-C-9-B-I-W of Superior Wisconsin tells it this way. Back in January Peter came home for lunch to find his dog Lilly missing. She has some how unhooked the standard dog clasp and a locking carabineer.

Peter first walked around the area looking for his dog. He then got in his car and drove their normal walking loop. But he was unable to find Lilly.

At this point he began asking people in the area if they had seen her. He found out that she had been seen in the area a few times and that she had escaped around 10:30am. So Peter called the local dog shelters, leaving a description of Lilly in case some one found her and brought her in.

By this time it was 3 P.M and Peter decided to try something that he had not heard of anyone else every trying before. He turned to ham radio for assistance in finding his mising pup.

Peter picked up his Yaesu VX-5, and called out on the local 146.94Mhz repeater asked if anyone his area could help my look for Lilly. Two amateur radio operators answered his call. This meant that there were now two in cars and K-C-9-B-I-W on foot looking for her. This meant that the searchers were able to cover much more ground in a very organized fashion.

It was just before 4:00 p.m. when one of the hams spotted Lilly and was able to pick her up. He then called out on the repeater to let every know she was safe. A bit later Peter was able to rendezvous and take the wandering Lilly back home. And thats a perfect happy ending to the story and to this weeks newscast as well.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW reporting.

--

Peters Internet positing about the help he received came with an apology. He wants to thank the two hams who helped out, but unfortunately he has forgotten their call signs. He adds that he hopes they will e-mail him so that he can give proper credit where credit is due. And if you want to see what Peter and Lilly look like, look up KC9BIW om the www.qrz.com website. (WA9ICU)

> need for new bandwidth is minimized.

How about this motivation:

One of FCC's biggest headaches in the avocational-radio area is the pirate/freebander/bootlegger, who simply ignores FCC rules and goes on the air using whatever mode/frequency/power/equipment/ID strikes their fancy. Enforcement agains such folks is more challenging because they're not in the database and they don't really care about "the rules" anyway.

This is not a new problem - the FCC rules about RF power amplifiers covering 12 and 10 meters were a response to these folks and the manufacturers who sold to them, not any problem in ham radio. Those rules date from 1978.

Perhaps FCC figures that if they make it easier to get an amateur license, there will be more hams and fewer pirates/freebanders/bootleggers. And if they get out of line, enforcement will be easier.

A few weeks ago, FCC went after several hams who were operating illegally on about 26 MHz. These were relatively new hams - wonder what they did before they got their tickets?

Waddya think?

BS, the services realized that with modern technology CW is an
outdated, antiquated mode, no longer useful to them. You are
living in your ham radio dream world too stubborn to see the truth.

John, you have to realize that Larry and his huge ego are just
waiting for the above scenario to happen so he can "save the
world" with his CW skills. He is in complete denial that when this
big disaster happens, he and his CW skills will mean nothing. I
can just see him waving his code key shouting "I can save the day
with my CW" at the officials who will laugh their ass off at him.
Read his "step aside Sonny" above and the picture of Larry and his
ego becomes very clear.
I have been a ham for over forty years, have participated in many
disaster situations, and I have never seen conditions where CW
was the only means of communication that would get through, even
at the bottom of the solar cycles. Guys like Larry live in a "I am
superior to you because of my CW skills" dream world.

You mean you and Larry boy don't know semaphore Dick? Why that is
just plain LAZINESS. You know, when conditions are so bad that you
and Larry have to rely on CW and your faithful CW rigs gives up
the ghost or conditions get SO bad that CW can't even get through
you and Larry could save the world by using semaphore, if you had
that skill, that is.

Who does that?

What most find irritable about you is that you insist that they learn
your favorite mode, not that you use it.

And the following Richard, is why, when I wrote my own professional answer and filed it timely, that I noted as to the issue of security that we absolutely could not afford this for that among many reasons. I stressed that not only do we have the massive problem for intereference from the proposed service, but that a carefully contrived attack on the service itself from the outside made us terribly vulnerable to security issues if we were to allow this technique.

The real issue for security is the deliberately contrived attack on the services. Who in the devil wants to risk all the network to terroristic threat from a purposeful intervention into the service. As I pointed out in my personal reply, the purpose of the service is really a point to point data link through a transmission line. To me it is bizzare that anyone would contrive to perform a service needing confidentiality on a transmission line technique that is wide open to disaster.

Tnx for the treatise, Rich, it clears up a few details that were hanging out there.

Clearly the revolution in technology is dependent on *other* factors more than on
the state of the art itself .
Which shouldn't, but as so often it happens, brings us back to
to the problem of "where do we go from here when the map is so ill defined?"

I can't help it, I keep being diverted back to the basics...all it takes for two
real radio operators to communicate is a basic radio transcieving system with very
minimal or even maybe no external support, and the skill to send and receive
radiotelegraphy....
Shucks, many of us recall when they used that system on aircraft!

Dick

Mike, you can Google up enough of Carl's stuff to show clearly what it means.
Which is exactly what Carl wants it to mean.

Hi Mike,

You didn't go far enough. The leakage is prima facia evidence of
security loss. The government is the poorest employer of standard
civil encryption services (government meaning those various agencies
that are not affiliated with black box funding).

What was it - a couple of months back some (friendly ruski?) diplomat
sat in his car outside of a government office downloading their
activity with his snooper attachment?

Hi Dick,

One need only look at the defunct 500KHz emergency radio operation to observe that two radio operators was abandoned long ago. And it was "modern" technology in the form of a signature tone that moved it the first step away. And that was after the rules were relaxed (or put in place originally) to require 15 minutes monitoring of each hour.

In less than 100 years we went from spark gap to satellite technology from the Titanic to flight 800 - and neither of those two fared very well for it. In the millennium before, it was semaphore and smoke signals.

Clearly technology is taken up quite quickly by comparison. When I was in DC last year this time, my girlfriend was adjusting the rear view mirror and engaged the OnStar system by mistake (the buttons being located on the mount). Two decades before the best you had was CB, a decade before it was disposable cellular phones.

> Different levels of knowledge, of course.

Why do such different levels of knowledge need to be tested? FCC sez a
Tech is qualified to use any authorized mode/power anywhere on the 2
meter band - but nowhere on the 20 meter band. Code test or no code
test. Why does 20 meters require more technical competency than 2
meters? Why does 14.020 require more technical competency than 14.030?

Yes, there's rules, regs and propagation. But the General and Extra
tests cover a lot more than those three things. The written test
system we have now, and which we have had for decades, FORCES more
technical stuff on prospective hams whether they want it, need it, or
plan to use it, or not.

> Many people already
> HAVE the technical knowledge to pass the written tests with ease.

And many do not. For non-technical types, learning the written
material can require quite a bit of effort. It took me far longer to
learn the written material than the code way back when. Heck, I was
licensed and on the air long before school got around to things like
electricity and basic trigonometry, let alone how even the simplest
radios work.

> The issue is that SOME people think that those who are in that

We'll see how that works out in a short time, when FCC dumps Element 1. I'm predicting that there won't be an NPRM or NOI or anything like that. FCC will just do a MOO or equivalent and say "This was all argued before, the treaty was the one reason to keep Element 1. Treaty's gone and so is the element. Game over, thank you for playing". As you predicted, a "slam-dunk".

Biggest unknown is how long it will take The Congress to rubberstamp the treaty.

btw, you put a date in The Pool yet? (see thread of that name).

I'm not one of those people.

> And too many people value the
> license for what they had to do to get it, rather than what it allows them
> to do.

It is simply human nature not to value highly what is acquired easily.

But let's talk about this "graduation" thing. In a way, a license IS a "diploma" or "graduation certificate" - it says you have met the requirements for that level of privileges. It does NOT say you know everything there is to know about the subjects covered, or that your education is complete. Just that you met the minimum requirements.

> > If YOU want to increase your technical competency, fine ... same for
> > anyone
> > else with the same desire. But that does not give you (or anyone else)
> > the right to force it on everyone else.
>
> I'm not bitching about today's tests ...

Which means you think that it's OK to force more written testing on everyone else if they want a reasonable-privileges HF license or a full-privileges HF license. Because when Element 1 disappears, Elements 3 and 4 will still be there. Sure - they were easy for you ~3 years ago, and their predecessors were easy for me ~33 years ago, but they're NOT easy for everyone.

> the only issue I have is that I
> think the Tech test is "light" for the power level it allows at frequencies

So you would either beef up (pun intended) the Tech written or lower
the Tech power level. (I think the latter is more reasonable, btw)

> Other than that flaw (IMHO, it's a flaw and the
> power limit should be more in line with the technical knowledge required
> for the license), I'm content with the tests we have today ... they are

Still doesn't explain why we need the Extra, or even most of the
General.
>

>
> Again, I think the Tech test/priv ratio is flawed WRT the power levels
> allowed.

But we're talking about a lot more than the power level. Most hams I
know don't ever run even 10% of the maximum allowed power. The past
two Field Days and Sweepstakes, I've used QRP. Did pretty well, too.
>
> I think that the FCC uses HF as a "carrot" to induce folks to learn more
> about radio

Ah - a "carrot" to get them to "jump through the hoop" of more written
testing. Or, to put it another way, it's OK to force people to learn
lots more written-test material, whether or not they are interested,
in order to grant them an HF license, but it's not OK to force people
to learn even a very basic level of Morse code/CW, whether or not they
are interested, in order to grant them an HF license.

Seems like a contradiction, since the Tech written test is obviously
adequate for all VHF/UHF modes and frequencies.

>... and that they are more comfortable with Tech privs because
> propagation generally limits the ability for Techs to cause interference
> beyond
> our borders. (note I said "generally")

Sure - but at the same time, VHF/UHF is where many if not most of the
public safety services are. Interference with those services can
easily cost lives.

FCC sez Techs are technically competent to operate all amateur
VHF/UHF, but not on most amateur HF/MF. Sounds like an artificial,
arbitrary barrier to force those without a technical background to

expend effort learning more technical stuff just to pass the test so
they can get on HF.
>

> Read your paragraph above ... it's flawed ... how can "those who have no
> interest
> in technical subjects" "contribute technically" ???

You missed the point that they could contribute in public service
communications and other ways. If there is any logical reason to make
ham licenses easier to get, it's so that there are more hams available
for public service comms - 'specially emergency comms.

Example: When the shuttle Columbia blew apart on reentry, it was
amateurs who provided much of the communications between search
parties (according to posts here by people who were there, on the
ground). Neither "technical competency" nor code speed made a bit of
difference then - just operating skills.

As for technical contributions, the writtens cover a wide variety of
subjects at a very basic level. Meaning you have to know a little bit
about a lot of things to pass, but knowing a lot about a few things
doesn't help you.

The person who is really interested in, say, antenna systems, is
forced to learn all sorts of stuff about other subjects to pass the
written tests - stuff that he/she may never use and isn't interested
in. Stuff which is not needed for the proper and legal operation of an
amateur station. Sounds like a hoop-jump.

> exactly that. Whether they would get a licence once code testing is
> abolished might be another matter.

Nonsense and a big copout

If you want a BS/MS/PHD Degree -- pass the tests
Want a driver license -- take a test
Want a job - take a drug test and physical exam and perhaps a professional test
Want insurance -- take a physical exam
Want to be an apprentice (JourneyPerson) -- take the test
Want to advance in the Military -- take the test
Pass the Bar (Legal that is) Pass Da Test
Nurses CPR for sure and maybe ACLS Tests
Sobriety Test -- Try to dodge this one
et al tests
Want an HF Ham license -- take the code and Technical/Rules et al test
Otherwise we have CB and FRS. And one who listens on these bands ought to be totally inspired to get a Ham Ticket !!!

Simple as that.

Anyone who used the code as an excuse for not becoming a ham, just wasn't serious about it.

If 10 to 17 year olds can do it, why can't an engineer or any other college grad ???

Did any of those "Engineers" get a No-Code Tech license ??
Didn't think so !!

That is right. Section 402 of the Comm Act permits an appeal when
the party filing for same is challenging an actual action (order,
grant or denial of application, etc) of the Commission. Federal law
requires that actions can be brought in the Federal courts only where
there is an actual "case or controversy", IOW no "advance rulings".

Ah yes - KSCO, whose long-time owner/engineer, the late Vern Berlin.
was colloquially known as "The Radio Sheriff of Santa Cruz". Anyone
do anything that wasn't kosher - bang, here comes the phone call
from Vern. IIRC he was an olde-tymer ham as well.

He's been gone for many years now.

But yes, the multi-tower array is in a salt marsh (protected
wetland) and the radials dribble off into the water. The use of a
120-radial counterpoise ground of proper length gives some stability
to the antenna impedance and to the vertical pattern which is
important in MF work because of night-time sky-wave factors.

That never worked here. And as I said, I kept the system on line
24/7 because of real-time updating the home office workstation to
and from the office server and instant e-mail connection.

As you know, Arnie, when HQ calls they expect you to be there on
the other end. I thought that I was finished with that when I
retired from the Feds but my private-practice clients expected no
less.

>That said, I was never all that
>impressed with the difference in speed -- other than for downloads. Regular
>surfing, NGs etc are close to the same for my system.

You apparently never had to download massive files. I frequently
had to download 150-300 MB worth of data bases or operating
system updates from IBM - "fixpacks" which are cumulative even
though only 10-20 MB of files are changed in each round.

The difference between "56K" running at 40K and the near-T1 speed of
a cable modem download has to be seen to be appreciated. It makes
the difference between doing it overnight or doing it while I go
get a cold drink from the 'fridge.

Isn't Code more of a skill than a knowledge? Any person can look at a piece of paper with a code chart on it and translate code, but that doesn't mean they have the skill to send or receive code over a radio. Wasn't the latter the ultimate purpose of the code test?

Lying? Hmmm...actually, Bill, I have no idea if you're lying, sitting,
or standing. I do, however, have a pretty good idea that even if you
do have a golf bag, full of golf clubs, you probably won't find
Larry's club called The Truth therein.

Of course, Larry was talking about an entirely different sort of club,
although a well-aimed hit in the head with a golf club would have
pretty much the same effect as the kind Larry's referring to.

At any rate, you could have a set of golf clubs lying around in the
basement and still have no desire to play the game. The equipment then
simply becomes part of the junk in the basement/garage/closet/attic
that you pay no attention to...kind of like my straight key and
Larry's microphone.

>growth in the numbers of licensed amateurs.

Heckuva lot of growth in the number of no-code Techs, though. So if
the total number of hams hasn't increased, the number of hams with the
other classes of license must have decreased accordingly in order to
keep up. Or are guys reverse-upgrading to Technician nowadays?

Don't look now, but it's about to get reduced even further, to a zero
WPM maximum. The result will be that there will be fewer and fewer
people on the bands that know any code at all...which means that there
will be fewer and fewer people for you to contact on CW. Unless, of
course, you manage to start convinging some of them that CW is
actually fun to use - and if you keep on going with the same
derogatory comments about no-code hams that you've been treating
people to for at least four years now, you'll have a tough time
getting anyone's attention even if you do decide to try.

No, that's when FEMA and the U.S. military will start shipping in
trailerloads of frequency-agile communications equipment - yes, VOICE
communications equipment including portable repeater systems, mobile
and handheld radios, and...aw, what the heck, you have Internet access
same as I do. Check out what the SHARES program is all about.

>Then he'll plug in his key and

With no electrical power? I think he'll need to plug in a lot more
than a key.

>Of course, you will never
>be convinced that that could happen -- so you'll just have to hope it doesn't.

Oh, I'm sure "the big one" could happen. I just don't think we agree
on what the needed response from the amateur community will be.
Furthermore, since I live in New York and you live in Delaware, it
doesn't matter what either of us expects. What matters is what the
ARES/RACES ops in the affected area will be expecting, based on what
the officials from their served agencies tell them they'll be asked to
do...unless you plan to hop on your horse and ride to California when
it happens - packing a QRP CW rig, a battery, and a few hundred feet
of wire, of course - in which case they may just stop you at the state
line and tell you to get lost.

>In the meantime, I'll be ready!

Is there a fault line in Delaware that I don't know about? :-)

>Well, unfortunately, there are lots of new Ham Heroes who believe
>precisely that, and they belive that their possession of the HT and
>650 mAh battery pack makes them a "real" ham radio operator!

The fact that their licenses say "Amateur Radio License" on them, same
as yours and mine, makes them "real" ham radio operators (assuming
they spelled their names right on their applications and thus don't
have an invalid license). How prepared they are for emergency
operation is another matter entirely.

>I don't think anyone's going to confuse emergency communications with
>anything enjoyable. However, in order to have total communications
>capability, leaving out Morse/CW capability just doesn't make sense to me.

Hmmmm...it made sense to the Coast Guard when it became clear that
they were better off using NAVTEX. USCG doesn't use CW anymore.
Somehow, I doubt that the rest of Homeland Security considers them any
less of a "real" organization because of that.

>We're going the wrong way on that, and the only reason for it is because
>people these days are just too damn LAZY to learn a useful communications
>skill.

Lots of people these days are learning lots of useful communications skills, Larry. Some even invent brand new ones once in awhile. The bottom line is, there is more than one way to skin a cat (so to speak), and as long as the message gets through, it really doesn't matter whether it went by CW, SSB, packet, PSK31, SSTV, or for that matter, by carrier pigeon.

Hmmm...my late paternal grandfather raised pigeons as a hobby. Makes me wonder if he thought the mailman was lazy.

>End of story.

But Larry, the story hasn't even *started* yet!

Actually, Larry could be quite correct. Nonetheless, code testing as a licensing requirement appears on the verge of going the way of the auk, the Edsel, and point-to-point wiring in commercial radio gear. One of the other regulars in this NG likes to comment that the plug is about to be pulled on the government life support system, or words to that effect, which is that person's way of saying that those who have a genuine interest in the use of the mode had better start thinking about finding another way to get people interested in learning the code if they want the use of Morse to continue to be a part of the hobby. Telling people they are lazy if they've chosen not to learn it is not going to do the trick.

>I can just see him waving his code key shouting "I can save the day
>with my CW" at the officials who will laugh their ass off at him.

One could be waving state-of-the-art voice communications gear and get the same reaction. That's why it's important for ham radio emergency communications groups to establish a good relationship with the emergency management officials in the areas they serve *before* disaster strikes. Once the proverbial merde hits the proverbial ventillateur, the folks running the served agencies will be too busy to listen to explanations. I'm sure most of us know how it goes, or can at least imagine - when you are up to your keister in alligators, it's easy to forget that the initial objective was to drain the swamp.

>I have been a ham for over forty years, have participated in many
>disaster situations, and I have never seen conditions where CW
>was the only means of communication that would get through, even
>at the bottom of the solar cycles. Guys like Larry live in a "I am
>superior to you because of my CW skills" dream world.

Despite that, I've no doubt that it's possible for such conditions to exist. The point that I think Larry and numerous others in the hobby seem to be missing is that this is a diversified hobby with a lot of different and equally interesting facets, of which CW is just one. I'm not about to ridicule anyone because they enjoy communicating with CW. However, I also don't think it's right to ridicule people who do not.

Arenie, does REVISED and REASONABLE mean "reduced technical material"
to you?

I guess if we asked for UNREASONABLE exams, that would make you
happier?

Probably not, but your intention is restore an UNREVISED amateur
service, which you aren't going to get.

> First, please show me where I said that NCI wants to END testing.

You did not, but chimed in when (see subject header) other PCTA were
suggesting "No Test International."

You can't
> because I never said it.

See above. Become enlightened.

Second, please explain what "revised" and
> "reasonable" mean within the context of the above quote from NCI? (that you
> conveniently snipped from my answer)

I read it in its entirety then stated that "Exams that "Rationally and
Directly relate to priveleges" could be quite difficult..."

If I didn't mean that, why would I state it?

You're welcome to repost it if you think I changed the context.

Does it mean that NCI wants to make
> the test MORE difficult? Even a blind man could see where this is going.
>
> Arnie -

Arnie, it means an exam level of difficulty commensurate with
priveleges, not punitive exams for the pleasure of those who want
Morse testing.

Brian

>rules date from 1978.

This sort of thing was debated amongst the cognoscenti in the hard times before the CB license was abandoned by pressure from the Ford Administration (Remember "First Momma" Betty Ford ??). Here are some scenarios:

Imagined Scenario #1

Judge to Prosecutor - "What has this defendant violated?"

Prosecutor to Judge - "He operated a transmitter without a license"

Judge to Prosecutor - "Is there anything barring him from getting a license?"

Prosecutor to Judge - "No, your honor"

Judge to Prosecutor - "Will he be legal when he gets one?"

Prosecutor to Judge - "Yes, your honor"

Prosecutor to Defendant - "I order you to get a license. Next Case"

Imagined Scenario #2:

Congress to FCC - "What is your number one headache that is costing a lot of money?"

FCC to Congress - "Tracking down and punishing all the unlicensed CB operators"

Congress to FCC - "Well, just drop the CB license requirement. Then you won't have an "unlicensed" CB operator problem any more"

Unfortunately, both of them were real and the FCC did the latter.

>Perhaps FCC figures that if they make it easier to get an amateur
>license, there will be more hams and fewer
>pirates/freebanders/bootleggers. And if they get out of line,
>enforcement will be easier.

Not at all. It's the same amount of work to DF the bozo, and the
penalty phase is just as difficult.

>Do you have an FCC policy letter stating that?

(a) Every FCC-watcher in the last 15 years knows that from public statements made by top brass (especially Reed Hundt) about cost-cutting.

(b) There was an internal policy memo circulated to staff talking about the need to privatize as many functions as possible in order to cut agency spending. This was not made public and is not available under FOIA because it dealt strictly with internal management issues. I did not retain a copy of same (because to do so would have been illegal).

(c) Every FCC-watcher in the last 15 years recognizes that in every "privitization" move by the FCC - or else they should be in some other line of work.

In the spirit of "privitization", why don't you and some
like-dedicated folks set up a table at some place and run code
tests, granting an appropriate certificate for whatever speed the
passer-by ham copies.

Oh, I'm sorry - the "anti-code-test" ARRL has already done it. It's
called the Code Proficiency Award, instead of the CSRC or whatever
the VEs used to call theirs.

I'll have to find my certificate somewhere so I can put a few
higher-speed stickers on it when the time comes.

Arnie ... your statement is JUST PLAIN FALSE. NCI has NEVER said
any such thing.

I have reported that, in my over 32 years in the RF communications
business, I have worked with MANY very competent engineers who
would be interested in ham radio, but can't/won't be bothered with
wasting their time jumping through a silly Morse code "hoop."

Some have become hams since they could get meaningful HF privs
for "only" 5 wpm ... I'm sure that more will once they can do the
same without having to waste their time on even 5 wpm ... these
are folks that could pass a technical test well beyond the Extra.
Do you doubt that, even without Morse proficiency, they could/would
make good hams and could contribute to the service?

> plan to use it, or not.

See 97.1 ... basis and purpose ... the ARS is supposed to promote
technical self-education and experimentation. While it is still sort of
"incentive licensing," using the "carrot" of increased privs on HF is
the FCC's way of promoting that goal.

Also, as I pointed out ... Techs on VHF/UHF stand less of a
chance of causing worldwide interference problems than folks
on HF (and the FCC doesn't like to have to deal with complaints
from other administrations ...)

>

However, learning that material at least is in line with 97.1's goals.
Learning how to encode/decode Morse with one's "wetware"
doesn't fall in the same ballpark.

> > The issue is that SOME people think that those who are in that
> > position "should be made to expend some (additional) effort" to
> > get their ham license (they ignore the effort ALREADY spent in
> > acquiring the aforementioned knowledge).
>
> Call that the "ante" effect.

It's not a game of poker ... you either know the material or you don't
and it is not a legitimate purpose of regulation to "make you work xxx
amount to get a license." If someone has to work to learn the material
that's legitimately required, so be it ... if they already know it and don't
have to put forth any (further) effort to learn it, so be it, too.

[snippage]

> It is simply human nature not to value highly what is acquired easily.

I worked hard for many years to gain the technical knowledge and
skills I have ... the fact that I didn't have to put forth additional
effort to pass the extra test doesn't devalue what the license allows
me to do one iota.

> But let's talk about this "graduation" thing. In a way, a license IS a
> "diploma" or "graduation certificate" - it says you have met the

OK ... goes to the old joke, "What do you call the guy who finished
at the bottom of his class in medical school?" (Doctor)

Hams will have different levels of technical knowledge and skills,
depending on whether they are engineers, plumbers, cab drivers,
etc. (Though there is nothing preventing an interested, intelligent
cab driver from studying on his own and achieving a high level of
technical knowledge and skill.)

> So you would either beef up (pun intended) the Tech written or lower
> the Tech power level. (I think the latter is more reasonable, btw)

If it were up to me *personally*, I would reduce the power limit for
techs to something around 50W ... those that simply operate commercial
radios wouldn't really be affected, those who have the skill and knowledge
to build higher powered rigs for things like EME, tropscatter, etc. should
have no problem passing at least the General written.

> > Other than that flaw (IMHO, it's a flaw and the

> General.

If you don't get why the FCC uses the "carrot" to promote 97.1
I doubt I can explain it in a way that will cause you to get it.

I strongly suspect that you actually *do* get it, but simply wish
to be contrarian about it because it suits your purpose ... which
appears to be to attempt to justify forcing Morse on everyone
"just because the technical stuff is forced on everyone" (or something
to that effect.

But I would wager that the vast majority of techs use store-bought rigs
(and with today's interated circuits, SMT manufacturing, etc, they are
generally VERY reliable, statistically-speaking)

[snip]

It's the same factor that kept the Interstate Police HF Radiotelegraph Net in operation into the early 70's even though wireline teletype had fully matured many decades earlier. The cost of dedicated wire lines, monopolized by one AT&T in those days, was just too high to justify. Plus some states and others hired personnel to do "double duty" with both commercial radiotelegraph operators and radidotelephone operators licenses so that they could handle interstate and
interdepartmental Morse messages, operate the voice dispatch centers, and do low echelon radio maintenance as circumstances demanded. Of course it's all gone now.

> > Wanna talk about Luddite methods of communication? How 'bout
> > per-message traffic handling by CW ????

Evidently you've never observed a veteran, skilled CW message handler at work. Many would have given any voice traffic handling system a real competitive time of it, and some hams still do.

In 1972 I worked Bill Leonard, W2SKE, the TV news veteran, on 2 meters simplex when I heard him calling CQ /aeronauticala mobile. He was on a jetliner 30 m inutes out of Dallas at 30K feet headed for New York City, using a rig identical to the one I was using mobile at the time- a Drake TR22. All of a watt and a half on each end. He said he was holding his up to the window of the Boeing 707 (in the days prior to the banning of such operation) Our path didn't last long but we sure had a good noise quiet QSO while it did.
THAT was some pretty simple, inexepensive, unsophisticated but very workable technology. Looks to me that sometimes high-tech can get in the way of getting things done. But it's SACRED, and almost sacreligious to make such a statement.

870. Commenting on RM-10740 Wi Fi SSB and AM

Go to
http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi
and you need to type in "RM-10740" with the dash, else the
FCC's system doesn't recognize what you're talking about.

Also, none of the FCC's search engines seem to know what
"RM-10740" is. Really stupid system.....

I just finished reading a news article about how a new online scam is using
computers that stay online with broadband connections as host servers to serve
porn rings. The scammers download their webpages to your computer and then direct
users to your machine instead of theirs. Helps them dodge ID and shutdown by
their own ISP's. Meanwhile it's all transparent to the computers owners.
Evidently this is something new or just now being recognized.
It says one should use a firewall to prevent it all.....

Source record: 70695

i know there are some power line communications systems in use out there. remote reading power meters, home computer networks over existing power wires, even x10 stuff puts signals over the power line. i have been hearing a noise that i just can't identify, i have narrowed the source down to an area of 3 or 4 houses about 1/2 mile away from my station, but need to build a directional antenna to get it down closer. the real question is what might i be looking for????

recording at: http://www.k1ttt.net/audio/rfi4125AM.wav
this recording was made at about the loudest peak i found at 4125khz, AM mode, 6khz wide filter. as you can hear it is a pulsing about 2 or 3 beats per second. this noise repeats at irregular intervals from at least 3410 to 4365 roughly every 30-60khz, in between the peaks there is virtually no trace of it. the pulsing is not in sync on all the peaks. to me this sounds like a multiple carrier fdm power line modem, but what kind of device would be available that operates in this frequency range?? does anyone know of a source of a noise like this??

I for one have no problem requiring an applicant for an amateur
license to be well-rounded in radio and electronics, both theory and
operations including regulations.

There was lots of stuff that I was "forced" to learn in all three of
my professions (which I sometimes refer to as shoeshine boy, baggage
handler, and bus washer) but even though I may never use it in my
specialty, it was necessary to learn it in order to be a "well-rounded"
individual who can easily follow and evaluate what specialists in those
other fields say rather than just smiling, nodding my head, and not having
a clue.

Applying it to ham radio, the operator who may be a good traffic
handler but doesn't have a clue about what OET 65 requires of all
ham operators (OK folks, look it up) is going to be behind the
eight-ball if s/he's not in compliance. Ditto for the one who is an
antenna maven but doesn't have a clue about digital communication
protocols and emission masks.

Without the "generalist" background I'd be just another narrow geek.

Only because of economic reasons. The "technology" worked just fine
but the shipping companies figured out a way to save $100,000 per
vessel per year, which is really peanuts compared to the cost of
operating a modern cargo vessel ($5000 per day to tie up at the
dock), by getting rid of the Radio Officer, and that was only in the
last 5 or so years.

>And it was
>"modern" technology in the form of a signature tone that moved it the
>first step away.

Do you mean "auto alarm" sequence? That wasn't a tone. It was
twelve (or more) 4-second dashes (3.8 sec. to 4.2 sec. by _my_
stopwatch) with one second silence between them. I inspected and
tested an awful lot of auto-alarm generators and receivers during
ship radio safety inspections over a period of 30+ years until the
GMDSS system came in and those inspections were privatized.

Standing watch by auto-alarm receiver was permitted only on cargo
vessels which carried one operator who was required to be on duty
eight hours a day. The auto-alarm watch could be used when the
operator was off-duty or on a break.

The four-second-dash auto-alarm signal was sent to alert other
vessels and shore stations that a Distress Call (with the famous
SOS) was following. On shipboard, if watch was being kept by
auto-alarm receiver, reception of the auto-alarm signal would
trigger a loud bell on the bridge, in the radio operator's cabin,
and in the radio room. One could not miss that activation !

The radiotelephone auto-alarm signal was a two-tone signal to
actuate a muted 2182 receiver on the bridge. It was supplanted by a
watch receiver on 2187.5 kHz in a Digital Selective Call system.

>And that was after the rules were relaxed (or put in
>place originally) to require 15 minutes monitoring of each hour.

Not quite.

The original pre-WW-II requirement was two "silent periods" of three minutes each, starting fifteen minutes after the hour and 45 minutes after the hour. During those periods, as well as when not actually sending and receiving traffic on another frequency, the operator on duty was obliged to monitor 500 kHz for distress traffic. After WW-II, a similar requirement was added for radiotelephone distress traffic on 2182 kHz, with the silent periods of three minutes each starting on the hour and half-hour.

Each radio room was required to be equipped with a special clock having the silent periods marked - a red wedge for the telegraphy silent periods and a green wedge for the radiotelephone silent periods, as well as red markings around the periphery of the dial for the four-second auto-alarm dashes.

Such a clock, made by Chelsea in six-inch size in a heavy brass case with an 8-day precision windup movement, would fetch about $800 now if one could be found, but a replica 10 inch diameter wall clock with a quartz movement (and all the right markings) is available on the internet for $15, believe it or not. I have one on the wall of my comm room / ham shack and it's just as advertised at:

<http://www.cafeshops.com/amradio,amradio2,amradio3.4044580>

(I'm not connected with them in any way.)

>In the millennium before, it was semaphore and smoke signals.

In 1965, in celebration of its centenary, the ITU published a wonderful "coffee table" book entitled "From Semaphore to Satellite" which covered the events and technology of its first 100 years including some very interesting pictures. I don't know if it is still available, but I was able to pick up an original edition when I was in Geneva on ITU business in 1967.

>Two decades before the best you had was CB,

Nonsense. I had a 2-meter transceiver in my car in 1958, which worked through a repeater in Los Angeles, crystal controlled AM, of course. Many of my friends who were hams did, too. By the time that the "CB" craze hit, we had 2-meter crystal-controlled FM rigs. My first mobile dial-the-channel synthesized 2-m transceiver (Icom IC-280) was in 1976 and my first 2-meter mobile transceiver with memory channels, variable offsets, CTCSS tones, and all the bells and whistles was in 1986 (and I was a "late bloomer" on that one) when cell-phones were still lunchbox-size and their coverage was spotty.

"Nothing new umder the sun."

|
| I sure agree with that comment, Phil. What's really interesting is
a 4-tower inline array with one of the towers winding up as a negative
impedance. Lots of fun to keep that monster in tune. Glad I don't
have to do that any more. Same 4 towers are top loaded with the upper
most set of guy insulators on each tower shorted out, then no
additional insulators put lower down on the guys. Talk about a
drifting array when rime ice forms on the wires during the winter.

I also measured the peak RF voltage at the base of the two center towers at over 15,000 volts each! This with only 5 KW of RF total input.

As you know, Arnie, when HQ calls they expect you to be there on the other end. I thought that I was finished with that when I retired from the Feds but my private-practice clients expected no less. You apparently never had to download massive files. I frequently had to download 150-300 MB worth of data bases or operating system updates from IBM - "fixpacks" which are cumulative even though only 10-20 MB of files are changed in each round. The difference between "56K" running at 40K and the near-T1 speed of a cable modem download has to be seen to be appreciated. It makes the difference between doing it overnight or doing it while I go get a cold drink from the 'fridge.

I agree with what you are saying, Phil. I don't download large files very often, so it's not a real issue for me. As to getting calls from higher higher, that's what pagers are for :-))

Do you really need to ask? *To Communicate by Amateur Radio*, of course.
CW ops have a mode available that no coders don't, and seems most never will.

[Arnie], does REVISED and REASONABLE mean "reduced technical material" to you? I guess if we asked for UNREASONABLE exams, that would make you happier? Probably not, but your intention is restore an UNREVISED amateur service, which you aren't going to get. You did not, but chimed in when (see subject header) other PCTA were suggesting "No Test International." I read it in its entirety then stated that "Exams that "Rationally and Directly relate to priveleges" could be quite difficult..." If I didn't mean that, why would I state it? You're welcome to repost it if you think I changed the context. Arnie, it means an exam level of difficulty commensurate with priveleges, not punitive exams for the pleasure of those who want Morse testing.

First, I accept your premise that you were not talking about me saying that NCI wanted to end testing. And, yes, revised and reasonable mean reduced standards to me. Like most codewords, when asked about them, they (NCI) can put whatever interpretation (spin) they want on them. How convenient. As to the Morse testing theory of yours. They don't state "Morse Testing" because they are speaking of the "written" exams. Look at their NPRM reply comments in that particular section and you will see this.

Umm, Carl.... you are here! You have have achieved your goal, at least will be very soon. I'm going to have to assume the reason is to engage in a little gloating? So you're getting what you want on all counts. You really wouldn't have to hear all us PCTA's crying if you didn't want to.

In other words, if you want to discuss it, we're here. Lessay we all do what you want, and "just live with it". I guess that means we're supposed to shut up. Then you wouldn't have the fun of discussing it with us, or even telling us to "just live with it".

I don't think you would like that very much..

Dick:

An even greater fallacy is the notion that "hams" who operate only
2-meters FM (which probably defines at least 80 percent of "hams"
licensed since 1991) is "qualified" as an amateur radio operator!
At the risk of sounding Kim-like, ROTFLMAO!!!

Were it not for the occasional usefulness of the 2-meter band to
"real" ham radio operators like you and me, I'd suggest that it be
separated from the licensing structure and just be given away to
anyone who can afford a transceiver. Of course, we've already gone
most of the way to doing just that, and we still don't see any real
growth in the numbers of licensed amateurs.

And your response comes because you are a ham and support CW and
you just can't stand the thought that CW may not save the world
someday. Go talk to your local emergency officials about how you
can save the world because you can use CW and see how much
importance they put on you views. So you put it to use in 1999
during Hurricane Floyd. Why? Was it the only means of
communications that could get through? I seriously doubt it. I am
not arguing the fact you used CW, just don't tout it as the end
all to communications during the Hurricane.

> Your 40 years as a Ham apparently haven't taught you very much. It's always
> better to leave Emergency Management Planning to the professionals. You
> just proved it.

It has taught me that I have never had to use CW as the only means
of communication during any emergency, and that includes
disastrous tornados, hurricanes, floods, and earthquakes. It has
taught me that CW is an antiquated mode and I am not silly enough
to think it will be some ham nut like Dick, Larry or you that will
save the world from disaster with your little code key. I am not
anti CW, just anti those who claim that it will be the savior of
the world and anyone who doesn't use code isn't as good a ham as
Larry, Dick, and others (you too I guess). I have known many hams
that never operated CW after upgrading from Novice, and they would
put Larry and Dick to shame as far as being "real" hams.
Look into the future and you see Larry's skeleton sitting at his
rig, hand on the code key still waiting to say the world with is
CW skills. It isn't going to happen.

> Want an HF Ham license -- take the code and Technical/Rules et al test

Code won't be included in that for much longer. I assume that since you
just say 'take the test' about everything, that you must have no problem
with that. I certainly don't!

> Otherwise we have CB and FRS. And one who listens on these bands ought

Having known Fred Maia personally in the past, I would not put
much stock in anything he has to say.

Well, it's certainly possible that it was their excuse to make me go away and quit bothering them!

All the same, these are people who could pass the Extra theory without too much effort, so once there is no longer a code test we probably _will_ see some of them on the air.

What are you worried about Dick? You and Larry will still be able
to communicate with your CW skills. I am sure your CW will still
continue to get through. I would think you would be very happy
that BPL may put all those nasty no CW hams off the air, then you
and your CW only buddies can demonstrate every day how your
superior CW skills can be used.

Frankly, since anyone can get any call sign within their license class (or below), I should get back WN2CJV (a novice call sign). Of course, anyone can likely get a program to send/receive CW, but perhaps I should restudy the American Morse (land-line Morse) as I have used it in the past. That might eliminate the software programs. Then ... well, let's see what happens. I will admit that I'm not up to what I used to do; I checked a web site that offered CW up to 65 words per minute and I admit that I was in trouble at around 55 or 60. Still, I might have fun with that old novice call sign :)

Hey, go for it! Just keep in mind that I may be able to send and receive Morse faster than you can type ... :)

I love it when folks talk about the speed of the internet. I have programmed in a number of different languages, but 'cut and paste' doesn't count in my book. Yes, one guy I worked with used to brag how he 'prepared' his essays in college using 'cut and paste'. My question is, how fast can someone actually send a message without cut and paste?

Dang, original thought has reappeared as 'vapourware'.

For the record, 40 per was the fastest test administered by the Navy at Bainbridge, Md. I had perfect copy. How much faster I could go, I don't know. I doubt it was much more that 50, however. So, the question is, can you put 50 words per minute out on your keyboard? Hmmmm ... BTW, I could hit bursts of 92 words per minute on a 100 word per minute teletype back when. Ok, so I'm getting slow. Care to bet that I can't do 60? How about 70 on my keyboard? That doesn't matter; the question is, can you do 40 per with *no* errors.

Your ball!

Larry, when you trim all the BS off the no-code position, all that's left is
that they refuse to even acknowledge that the first existing, most basic mode
of radiocommunications is even a viable mode of radiocommunications!
Much less that it is the simplest, easiest to implement and one of the very
most efficient modes!

If it weren't so downright silly it'd be funny. But that's what ham radio had
degenerated into.

seben trees,
Dick

Well, as always, those that can -- do. Those that can't -- whine about
the requirements and wait for them to be dumbed-down to their level!
I highly suggest that to add to your sense of self-satisfaction, that once
you get your "No-Code Extra" you make a point of telling every Pre-
Restructuring, 20-WPM code-tested Extra you know that you are their
"equal" as a ham radio operator. I'll go so far as to bet that you can
even find a few that might agree with you -- but they'll mostly be phone
operators who outgas into their microphones all day, and haven't touched
a key in who knows how long!

Bill:

Yes, that's right. She's involved in the "non-political" CW Operator Awards Program for Retired Geezer Brass Bashers known as FISTS. She is, in fact, the North American "Secretary" of that organization. She is also the new editor of WorldRadio. At least she has found something useful to do.

Bill:

Of course it did. The FCC is a government bureaucracy that serves
mainly commercial interests. Amateur Radio just isn't important enough
to them to be bothered to expend the resources necessary to maintain
high licensing standards as the had in the past. No mystery there.

>> This
>> is the one skill which gives them the ability to keep on communicating

>
>So how come the other services abondoned morse as such a
>valuable back-up?

Again, follow the money and you'll learn the truth. The cost of hiring,
training, and providing pay and benefits to CW-proficient radio operators
is the key factor in play here. But you already knew that. Moreover,
these "other services" you're talking about use high-powered satellite-
based technology which is designed for their specific purposes. But
you already knew that, as well. When you make apples-to-oranges
comparisons between the all-volunteer Amateur Radio Service and
publicly- or commercially-funded communications services, your argument
falls flat on it's face. And if you didn't already know that, you're just as
deluded as any other NCTA.

John:

It's all based on laziness, because at the end of the day, the guy is
just too plain lazy to make the effort to improve his CW technique. It's
not about choice or anything like that. Lacking the motivation of a
requirement to take code tests of increasing difficulty in order to upgrade
and obtain higher privileges, you and your hypothetical "ham" will not
be bothered to do so, in the majority of cases. You can make as many
excuses as you care to, but it all boils down to laziness.

John:

I agree that Morse code proficiency has nothing to do with speaking or typing -- but the ability to effectively employ the Morse/CW mode -- at speeds greater than 5 WPM -- will keep you communicating when conditions prevent you from communicating by voice or digital modes. You have done nothing but provide personal, anecdotal proof that reducing code testing requirements down to a mere 5 WPM maximum was NOT a good thing!

>subject to the propagation difficulties often encountered on HF.

True -- when the "emergency" is confined to a small locality and the VHF/UHF repeater infrastructure remains intact. However, what if there is a widespread disaster -- such as the "Big One" striking the San Andreas fault

line in California? That will not be a "local" disaster -- it will affect the entire country. Vast regions hundreds of miles in radius will be affected, and the commercial communications and existing Amateur Radio infrastructures and the power grids they depend on will be disrupted for God only knows how long. At that point, we could be talking about areas with populations of hundreds of thousands of people being out of communication with the area "outside" the disaster zone. Communications nets spanning many times the normal operational range of terresterial VHF/UHF systems will be necessary -- and don't look now, but we're coming to the downside of the solar cycle -- meaning poor propagation. I guarantee you that there will be lots of opportunities for No-Code HF Ham Heroes to help out, but when conditions dictate the use of CW, in order to be able to communicate when voice and data modes fail due to lack of available electrical power or poor atmospherics, that capability will not be available because it will not have been learned. That's when some guy like me will enter the picture, and say, "Step aside, Sonny, and take your toy microphone with you." Then he'll plug in his key and re-establish contact with the outside world. Of course, you will never be convinced that that could happen -- so you'll just have to hope it doesn't. In the meantime, I'll be ready!

>function as an emergency communicator when the proverbial merde hits
>the proverbial ventillateur.

Well, unfortunately, there are lots of new Ham Heroes who believe precisely that, and they belive that their possession of the HT and 650 mAh battery pack makes them a "real" ham radio operator!

>have yet to use CW during an activation.

That is the usual case. However, I did impress the begeebers out of one certain county EOC Director by using CW during a practice exercise. Then he asked me, "Why can all the other hams do that? I can see where Morse code could be very effective. You were copying that other guy (who was in Indiana -- I was in Delaware) perfectly even though I could hardly hear him!"

>73 DE John, KC2HMZ

I don't think anyone's going to confuse emergency communications with anything enjoyable. However, in order to have total communications capability, leaving out Morse/CW capability just doesn't make sense to me. We're going the wrong way on that, and the only reason for it is because people these days are just too damn LAZY to learn a useful communications skill. End of story.

You're right. Perhaps memorizing the individual sequence of sounds associated with a letter of the alphabet is knowledge on some very basic level, similar to a young child memorizing the sounds associated with the letters of the alphabet. Amazing that this would become a key focus of testing in ham radio for so many years.

Mygawd, Dwight, are you really licensed as a ham? And *that's* all you know of
radiotelegraphy?
You been hiding out in the wilderness somewhere, in a cave? What do you think
it was that started
radio in the first place, semaphores?

JJ, one does as one is. Even Forrest Gump knew that.
Look for excuses and there are always some to be found.

Takes 3,000 of you guys in D.C. alone to "handle" the FCC huh?
Something is not just wrong with this picture, something is *really*
GOOFY. As far as BPL is concerned I'm wondering about how many hassles
will develop if the FCC abandons it's current rules in Part 15 in
order to accomodate BPL and/or related types of creative legal hassles
guys like you might be able to dredge up to stymie BPL, Tie it up in
the courts or wherever until the proponents give it up, etc.

I think ya slipped a thread. The BPL thing is currently the subject of
an NOI. Doesn't the FCC eventually have to publish an NPRM and go thru
the whole comments and rebuttals drill again for BPL before they can
authorize it?

Radio's start was a very long time ago, Dick. And I can understand that. However, it is the "for so many years" part of my comment that I find amazing. Here we are so many, many, years later still focused on that.

Phone goes back a long way. Yes, Marconi started out with Morse code, but
AM was only a few years behind.

There was phone even when people used spark. A circuit patented by Elihu
Thomson to keep arc lamps burning was adapted by Prof Duddell FRS to keep
a spark going continously for this purpose. This type of transmitter was
used by DeForrest in his famous voice coverage of the yacht race from New
York harbour. His 'Audion' (triode) was not used in the transmitter as
most assume, but in the regenerative receiver used to pick up his spark AM

signals on shore. This was because he hadn't figured out that it could be used to amplify, so it predated TRF receivers even.

Even before DeForrest, the first transmission of AM over one mile took place on Cobb Island, Maryland, on December 12, 1900. The system was designed by Fessenden, a Canadian whose research was funded by the weather service in the US. He used a spark gap driven by a high frequency alternator, commonly used to produce Morse at several kW of RF back then, but he had an 80 kHz alternator specially made for him by Poulsen, another pioneer in his own right. By exciting the gap with an alternator running at a frequency _above_ audio he was able to make maybe a kW of AM, whereas the Thomson/Dudell design made far less power (a few watts). Unfortunately he had to rely on some sort of rectifier with no amplification or regeneration for the receiver, hence only being able to hear a kW of AM no more than one mile away.

Moving on just a couple more years, the earliest published circuits I have seen for continuous wave transmitters, such as those by John Scott-Taggart, show a mic as well as a key. They would, of course, as phone was known for spark transmitters. CW, of course, originally stood for continuous wave in the sense of 'not spark', and was applied to AM as well as Morse. I do use that kind of CW!

Larry Roll K3LT said:
>Those that can't -- whine about
>the requirements and wait for them to be dumbed-down to their level!

Well some coders refuse to learn the technical material. Although
time-consuming, Its easy to learn one skill (CW) and claim superiority for
that.
Seems like the requirement was dumbed down to the non-technical Ham's level.

There are other reasons not to learn code other than "dumbed-down" as you say.
One is that I don't like code. Another reason is image. It shows that you put
time into a worthless pursuit (Morse code). Image is NOT the consideration for
me. I would learn it if I wanted to.

I don't have to learn <Morse> code just so I can prove I have the ability to
learn <Morse> code. I have learned other skills that are just as difficult.
Another reason is the "benefit" is not worth the effort. I would put effort
into those because I can use those skills in <real> life. I cannot use <Morse>
code.

>I highly suggest that to add to your sense of self-satisfaction, that once
>you get your "No-Code Extra" you make a point of telling every Pre-
>Restructuring, 20-WPM code-tested Extra you know that you are their
>"equal" as a ham radio operator.

Funny, thats what pro-coders say. They say that a General class that learned
<Morse> code is superior because they have a higher license class. I would say
that the General or Extra that just learned code may not be superior to the
Technician that wants to have good technical skills, but refuses to learn code.

> most people.

I am not against the mode, and not sure it is necessary to testing anymore. CW will continue for some time to come to be a ham radio tradition and will be in use on the bands probably long after most of us are gone, even if it is dropped from the requirements to obtain a license. The use of "antiquated" or "obsolete" does not automatically imply against. A Ford Model T is antiquated and obsolete as compared to modern day automobiles, but I certainly am not against those who restore and run Model T's, I really like seeing one go down the street. I restore old "antiquated" and "obsolete" radios, and play them every day.
I am against those who think that they are far superior to others just because they use and support CW as opposed to those who chose not to use that mode. There are those on this group who constantly remind everyone how much superior they are and they are the "real" hams just because they like to use CW. They are no more superior or a "real" ham than the ham who chooses not to use that mode. It is all their inflated egos and nothing else. Their opinion of the importance of CW is just that, their opinion and nothing more. CW isn't going to save the world.

John, you have to realize that Larry and his huge ego are just waiting for the above scenario to happen so he can "save the world" with his CW skills. He is in complete denial that when this big disaster happens, he and his CW skills will mean nothing. I can just see him waving his code key shouting "I can save the day with my CW" at the officials who will laugh their ass off at him.

This EMA Director won't. I have already incorporated CW in my Emergency Management Plans. It's a great tool to have (in conjunction with the other available communications modes). I actually feel sorry for those in EMA, and Amateur Radio, that discount it. We put it to great use during Hurricane Floyd in 1999, and I'm sure we'll use it again in the future. Your 40 years as a Ham apparently haven't taught you very much. It's always better to leave Emergency Management Planning to the professionals. You just proved it.

Since the beginning of the use of phone in ham radio, I would be
interested to know of any disaster where ham radio was used for
communications and CW was the only means of communications that
could get through. I don't mean CW was used just because someone
wanted to or because they only had CW capabilities, but because
it was the ONLY mode that could get through.

The Man, Ronald A. Wright, N9EE

Story By Robert Hartung - KE4JCD
Publisher of Hartung Press - http://www.ke4jcd.com

Mr. Ronald A Wright, N9EE is no stranger to trouble, for over 3 years now, his repeater has been plagued with jammers, notices from the FCC about interference to other area repeaters, hams avoid his repeater because of the endless jamming and rude comments made by N9EE and other uses of his repeater.

In this writers opinion, Ron N9EE, has a High-minded view of himself because he is an Extra Class, his malicious attitude at me simply because I will not upgrade is well known. It seems he lives to trying to bring dishonor to anyone that don't live up to Ron's expectation of what a ham should be and, trying to discredit area hams by malicious but untrue things about other like, there the ones doing the jamming...

Some like this writer feel that the jammers have not been located because there being used as a tool to run undesirable hams off the air and it seems to be working too. The jamming has been going on for over 10 years now in the Tampa Bay Area, why? That's the question many area hams have asking and who is behind it?

The jammers always attack the undesirable hams like WA8JSC, W4BVH, WE4H, KE4JCD and the list goes on and on.... Now I'm not saying that Ron knows who or is behind it, only that no one including Ron is trying very hard to locate the Jammers, why? Maybe it because the reason stated above, many think so....

Plus, where is the all powerful FCC, why?

To read this and other Amateur Radio Stories go to
http://www.ke4jcd.com

I hope this will help bring the FCC to our AID!

Dick,

If find your comparison of yourself (and Larry) to Forest Gump
to be most appropriate :-) "Stupid is as stupid does." was the
saying from the movie ... and while I don't actually think either
you or Larry actually ARE stupid, you both certainly ACT that
way.

Dick,

That's simply not true ... OOK Morse is clearly still a viable mode of
communications ... (to use the much-used analogy, so is horseback
riding as a form of transcontinental transportation).

It's just that it's been bypassed by more modern, more efficient means
that that vast majority of people prefer.

Read again the "What we believe" on the NCI webpage ... nowhere does
it say that "Morse is not longer a viable mode." ... and it certainly
doesn't
say that we oppose its use.

Satellites have NOT totally supplanted the use of HF by other services.
Morse has simply been replaced by things like SITOR and other data
services using ALE techniques for faster throughput and better reliability.

If HF had been abandoned, we would have gotten more than 5 discrete
channels at 5 MHz.

Because you haven't provided any information about or confirmation of your
alleged operation.

Why won't you answer these simple, direct questions, if you were really
operating from there?

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

I'm sure there are people from all walks of life who would have been hams but
for the code test. I'm also sure there are people from all walks of life who
would have been hams but for the written test.

There are also lots of people who are not really interested, and the code test
makes a handy excuse.

Probably - at least one country has already dumped it in the wake of WRC-2003.

What will be very interesting to see is what effect complete elimination of
code testing has on the number of new hams and the overall growth of the ARS.
More than three years ago, the 13 and 20 wpm code tests, and the medical
waivers, were dumped by FCC. Result was growth of about 11,000 hams - and a lot
of already-licensed hams got upgrades. Sure doesn't seem like there were a lot
of people being kept out by the 13 and 20 wpm code tests.

btw - I'm an engineer, and none of the tests were a deterrent for me.

> truth?
>
> Arnie -
> KT4ST

Arnie,

The technical fact of the matter is that SSB is just about as efficient as
it
gets for voice communications. The baseband (audio frequencies) are
translated to RF and back, with the result that the RF signal is no wider
than
required to convey the baseband bandwidth. (unless, of course you're
running things into clipping and causing all sorts of intermod products)

While digital voice has some advantages in some applications (particularly
if one wants to use mixed media, such as VOIP links), even the best
low-rate codecs require a bandwidth at least as wide as SSB and at those
coding rates don't provide the same fidelity (speaker recognition, tonal
quality, etc.) due to the coding involved.

Yes, SSB is at least 60 years old ... but Morse is what? About 3X as
old?

Its not simply a matter of age ...

Mike,

Do you seriously believe that just because someone is not interested in
Morse that they could not be interested in, and contribute in valuable
ways to, other aspects of ham radio?

"Elmering" new hams who are not technical on the technical aspects
designing new modes
writing useful ham software
building networks
public service communications
emergency/disaster communications
"SKYWARN"
etc., etc.

Just because someone isn't interested in jumping through the Morse
hoop, doesn't mean that they are so selfish that they can't/won't
contribute.

I'm not here to gloat ... I'm here to make sure that newcomers hear
the news and aren't overly tainted by being totally awash in PCTAs
to the point that they think all hams are that way and decide that ham
radio isn't really for them after all, because of a false perception that
it's totally populated with the sort of folks that they'd really not like to
associate. :-)

You must have missunderstood ... NCI *never* said the tests were
too technical ... we did refer to (modernizing) revisions, revisions
necessary
to align test elements with the new licensing structure, and to making
the material tested relevant to the privs the license class conveyed.

Since we oppose testing for your favorite mode, and the debate here
has occasionally been "less than totally civil," I can understand how
you could be inclined to interpret things in the most negative (from your
perspective) possible way.

> I recall quite
> a few remarks by NCI Directors saying that the entry level tests were too
> technical and that revisions were in order.

Fred Maia, W5YI, was quoted as saying something along that line WRT the
Tech test ... but Fred is just *one* of the Directors of NCI, and I can
state that
his view in that regard is NOT NCI policy and is not shared by me or the
rest of the NCI board. (IIRC, Fred also said he'd like to make the Extra
test
more rigorous ...)

> Of course, NCI was never in
> favor of removing the digital/CW sub bands either, right?

No, we were not ... and we never said we were. If you "google" or
whatever, you will, I am sure, find numerous instances of me saying
that I would *not* favor an expansion of the phone bands at the
expense of the digital/CW sub-bands, because I wouldn't want to
see the future development of digital modes impeded.
(You will also note that CW is the only mode that is allowed on

ALL amateur frequencies ... with two minor exceptions ... a small chunk at 220 MHz that is reserved for high-speed digital links and the 5 new channels at 5 MHz where only USB is allowed for reasons of compatibility with incumbent US Govt. users ...)

I'm not sure, but IIRC, some of the "remote phone jack" modems that
used to be IN the 80m ham band may have been moved above the
band. This could be one that is malfunctioning, but that is just a guess.

I would suggest you contact Ed Hare w1rfi@arrl.org and see what
he thinks.

BTW, I tried to listen to the .wav file at the link you provided, but
even with my cable modem connection the file had not loaded after
about 2-3 minutes, so I closed the browser and gave up. (are you
hosting your website on a dial-up connection?)

i tried w1rfi but haven't gotten a response yet. the website is on an isdn line and is normally pretty quick, the file is only 129k so should not have been a problem, the best description i have heard for it is that it sounds like an old steam engine chugging away.

Arnie, if learning semaphores had been a licensing requirement for the ARS, I would have learned it along with lots of others, like it or not. I sure wouldn't have sat on my backside for most of my lifetime carping about how 'unnecessary' it all was to make me jump through some "useless" hoop.
But of course semaphores have no application to radiocommunications, as I inferred, and JJ knows that, it's just all he could grope around and come up with.

Hello Dick:

I rec'd the following yesterday as you probably did as well;

SB QST @ ARL $ARLB043
ARLB043 ARRL files comments, studies in Broadband Over Power Line
proceeding

ZCZC AG43
QST de W1AW
ARRL Bulletin 43 ARLB043
From ARRL Headquarters
Newington CT July 10, 2003
To all radio amateurs

SB QST ARL ARLB043
ARLB043 ARRL files comments, studies in Broadband Over Power Line
proceeding

Pointing to a potential for interference to and from Amateur Radio,
the ARRL has called on the FCC to "take no steps" to permit
Broadband over Power Line (BPL). The League's 120-page filing, which
includes several lab studies, was in response to the FCC's BPL
Notice of Inquiry in ET Docket 03-104, published May 23.

Comment: OK, this is fine, however where are these studies posted and who
performed them? Is this similar to the only study the ARRL possesses on
CC&R's that was done in 1988 in Boulder CO (which is the 4th most liberal
place in the US). The League is pouring thousands of dollars into that
particular lobbying effort (CC&R's) and resting their laurels on an inept 15

year old study. When I started investigating the CC&R issue, I found out that the only evidence the ARRL had to persuade Congress (other than throwing $$$ at them) was this pathetic study.

ARRL said the Amateur Service should not be "gored with the double-edged sword of an incompatible service" that will at once cause widespread interference and preclude any future changes in the amateur HF allocations.

Comment: OK, this is still on point but wht does the league need my money?

Citing "diligent and exhaustive research," ARRL concluded that BPL must avoid any and all amateur MF, HF and VHF allocations without exception.

Comment: What "diligent and exhaustive research," ? When someone asks you for $$$, dont they usually give you some stated facts relating to the reasons for the request? This is like reaching into a box of unmarked resistors and assuming that the one you pick is the correct value.

"This interference potential, as a matter of both law and fact, disqualifies access BPL as a potential future competitive broadband delivery system," the ARRL said in its comments.

Comment: CASE CLOSED. Its already a matter of law. No money needed.

League studies show received signal levels of BPL broadband noise at typical amateur stations would be anywhere from 33.7 dB to 65.4 dB higher than typical ambient noise levels in worst-case situations.
NNNN
/EX

Comment: Typical amateur station? 33.7 dB to 65.4 dB from what noise floor? WHERES THE BEEF?

73 de Paul

I seriously doubt that he actually learned it at 20wpm, tho I don't doubt he did pass a 20wpm 'test'. At one period the code tests were made quite easy and if you could copy at all often one could guess out 7 of 10 correct multiple choice answers on the test.

That's an easy one. The numbers didn't rise accordingly after restructuring.

> communications ... (to use the much-used analogy, so is horseback
> riding as a form of transcontinental transportation).

So you equate transcontinental horseback riding to the use of radiotelegraphy.
And you regard yourself as an engineer (even nondegreed)?
Just for your basic information, radiotelgraphy uses the same radio propagation
that any other mode uses, and - when the operater is actually skilled in its
use-
often does it better and faster, at lower power than most other common modes,
particularly than weak-signal voice modes which demand slowly pronounced and
enunciated words and the use of phonetics.
And, as it happens, both travel at the same speed! Eureka!Carl has found it!

But you already knew all that, you just like to slam CW. You still remember
failing that
13wpm test long ago, don't you? Too bad you didn't have what it took to go back
and do it right instead of spending your lifetime carping about all that hazing
that we who did
have laid on you.

And it does. But that does not mean a whole range of arcane bits of knowledge
has to be used as an entry hazing ritual.

Do the tests actually cause anyone to experiment, or educate themselves beyond the level required for the tests? I don't think so. Those who are interested pursue their interests, that's all.

97.1 also talks about a pool of trained operators, but wtihout the code test there will be no tests of operator skills at all. So if it's OK not to force operator skills on people by means of tests, why must mean a whole range of arcane bits of knowledge be forced on them?

> While it is still sort of

Nonsense. How often has the FCC had to deal with such complaints regarding HF hams in the past 20-25 years? Besides, Techs and Novices have long had access to at least 4 HF bands, at power levels only about 8 dB below that of Generals and above.

Sure. So is learning the code. And a lot of other things, most of which have no test.

>Learning how to encode/decode Morse with one's "wetware"
>doesn't fall in the same ballpark.

Sure it does. Listen to the non-phone parts of the amateur HF bands sometime. Lots of hams on there using Morse. Lots of DX, too, which comes under the "international goodwill" part of 97.1

Of course. Nor is there any requirement that the engineers will progress beyond
the level required by the tests. In fact, many of the 'engineers' and 'tecnical
people' I know who have ham licenses don't do much technical stuff in ham radio

at all. Too much of a busman's holiday.

Not at all - Morse isn't on any type of "life support". (Just the test).

--

All of this is quite academic compared to the threat posed by BPL systems. Yet
I notice that very frew of the regular posters here have even bothered to
comment to FCC about it. There's still time - comments are closed but reply
comments are open.

Nor do I, Phil.

Seems to me that a person who is "well rounded" in amateur radio will have at
least some skill in Morse code, though.

IMO they're just following the standard organizational philosophy, that being

"Get the money while you can, while you have a good reason to request it".

Seems all organizations now operate under this plan and thus they always have
funding
available (provided they can keep from squandering it on unnecessaries) during
times when they don't have a hot-button "issue" to scare contributers with..

Some of my ARRL dues paid for a round trip or two to Latin America to
fix some verbs. Outstanding, just outstanding.

And a few dozen others around here.

> Having been licensed for
> over 25 years, having learned Morse, passed a test (albeit 5 wpm,
> but my skill increased as I *used* it in the early days), then losing
> interest in using Morse

Yeah, you "lost interset in Morse" alrighty. More like you didn't feel
like putting enough effort into the matter to become proficient in the
mode. The oldest excuse in the game.

> seeing Morse keep many of my engineering
> colleagues from becoming hams over the years, and being involved
> in this issue for a number of years,

Carl me boy who gives a rat's ass if a ham, new or otherwise happens
to be an engineer or an electronics tech - and why please? When I look
around this region at what hams are doing and not doing I have to come

to the conclusion that if the health and welfare of ham radio depended on the engineers in the hobby ham radio would be a very sick pup. I'm talking about the engineers' miniscule participation in RACES, club leaderships, contesting, dxing, repeater coordination, ARRL field appointments, elmering, all of those things which are at the core of what makes ham radio tick.

The elevation of engineers to some godlike status in ham radio is another giggle I enjoy no end. Fortunately 95% of this nonsense is only found in RRAP and not out on the bands or in the neighborhoods where radio is.

> both before the FCC and in the

"If you had stayed home how would the results of WRC03 be any
different from the way they turned out?"

I think I have you scoped out Carl. You're one of these types whose
big jollies come from schmoozing all kinds of alleged VIPs and
advertising how "influential" they are as a result. Compulsive
joiners, thrive on endless "policy meetings", OhYeah, I've run into
the type many times. But when you peel away their bullshit and look at
their personal accomplishments . . .

Speaking of . . back when you picked up yer nickel Extra you crowed
about the all the towers & beams you were gonna put up and charge into
the HF bands in a big way. How's the tower work coming along Carl?

> Under the VE system, code testing essentially costs the FCC zilch ...
> there are no waivers, the VEs do the work ... where's the beef?

Every line in Part 97 costs the FCC money.

Want me to dig up all the posts in which you stated it was the NCI
mission to completely eliminate S25.5? Yes, NCI still has "work" to
do.

Carl I've been comfortable with all of it ever since I passed the 20
wpm code test and got my Extra 35 years ago. I have no stake in any of
beyond the entertainment folks like you provide.

948. FCC's broadband strategy

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-12 13:21:30 UTC
From: Dick Carroll <dickc58@att.net>
Message-ID: <3F100B48.33AF154A@att.net>
Source record: 70722

If there's anyone who doubts the seriousness of the "Broadband over Power Lines"

issue take a look at this, directly from the FCC's website, front page under
"Broadband".
It sure looks like they welcome any type of system that will cheaply bring
broadband access
to a large area, and that certainly describes the BPL proposal. Heading this
off may be a tough challenge.

Broadband

The FCC's strategic goal for Broadband is to establish
regulatory policies that promote competition, innovation, and
investment in broadband services and facilities while
monitoring progress toward the deployment of broadband services in
the United States and abroad.

Description

Broadband technologies, which encompass all evolving
high-speed digital technologies that provide consumers integrated
access to voice, high-speed data, video-on-demand, and
interactive delivery services, are a fundamental component of
the communications revolution. Fully-evolved broadband
will:

Virtually eliminate geographic distance as an
obstacle to acquiring information, and
Dramatically reduce the time it takes to access
information.

All will benefit as broadbandï¿½s technologies are
developed and deployed. Nonetheless:

The infrastructure is not yet ubiquitous,
Relative costs of deployment remain high compared to
narrowband,
Access is limited in underserved areas, and
Adoption rates remain low relative to availability.

Objectives

Promote the availability of broadband to all
Americans.

Conceptualize broadband in a way that includes any
platform capable of providing high-bandwidth intensive content.

Clarify and stabilize the regulatory treatment of broadband services.

Encourage and facilitate an environment that stimulates investment and innovation in broadband technology and services.

Harmonize regulation of competing broadband services that are provided via different technologies and network architectures.

Dutifully enforce market-opening requirements.

Monitor social and economic developments in order to provide ongoing national and international policy leadership and consumer education in the emerging broadband arena.

Brings up a question Carl: You're a seasoned EE and have been a ham
for many years. What technology-based contributions have you made to
the service?

>____
>
>Hey JJ -- did you forget that SSB is over 60 years old?

Actually, the use of SSB on radio is over 75 years old (AT&T transatlantic
telephone, 55 kHz LSB, in service 1927). SSB was first used by hams over 70
years ago (Ray Moore, W6DEI, and several others, early 1930s).

Widespread use by hams began in the late 1940s - almost 60 years ago - BEFORE
manufactured SSB equipment for hams was readily available.

>By your logic, it's
>time to shut that antiquated puppy down as well.

Old does not equal bad, or useless, or obsolete.

A question for JJ: Are you against the MODE, or just the TEST? Words like
"antiquated" and "obsolete", when applied to a mode, don't indicate support to
most people.

> So you equate transcontinental horseback riding to the use of
radiotelegraphy.

Yes ... in the sense that they have both been supplanted by more modern and
efficient means.

> And you regard yourself as an engineer (even nondegreed)?

Yup ... so do my peers (you don't fall into that category), including the
dozen
or so PhD's that I was responsible for bringing into my company.

> Just for your basic information, radiotelgraphy uses the same radio
propagation
> that any other mode uses,

Really? No fooling? :-)

> and - when the operater is actually skilled in its use-
> often does it better and faster, at lower power than most other common
modes,

ROTFLMAO!!! Better and faster, ha! At lower power, perhaps ... though
as has been pointed out before (though you continue to ignore the reality),
plain
old BFSK, at the same data rates as OOK Morse, has something on the order
of a 9 dB weak signal advantage over OOK Morse.

> particularly than weak-signal voice modes which demand slowly pronounced
and
> enunciated words and the use of phonetics.

See my previous paragraph above ...

> And, as it happens, both travel at the same speed! Eureka!Carl has found it!

You're delusional again ... take your meds or something.

> But you already knew all that, you just like to slam CW.

It's not that I'm "slamming CW" ... as I've said, use it to your heart's content.
But in the future when folks are not forced to learn it, you'll have to do your
own "recruiting," rather than relying on a government life support system for
it ...

>You still remember failing that 13wpm test long ago, don't you?

Actually, Dick, I never failed a 13 wpm test because I never TOOK one.
I took my 5 wpm test, then improved my speed working 40 cw, then
during a period when I was moving and the HF station (a Heathkit CW
only rig) was in storage, I got involved in VHF/UHF repeaters, packet
radio (in the early days), etc. and by the time the stuff was out of storage
I'd discovered that there were a lot more interesting things to do in ham
radio than making beeps ...

Jamming Still Happening on the N9EE Repeater

Will the 146.640 ever be free of jamming?

Story By Robert Hartung - KE4JCD
Publisher of Hartung Press

Mr. Ronald A Wright, N9EE is no stranger to jamming on his repeater, for over 3 years the N9EE repeater has been plagued with jamming problems with no end in site... The FCC is also no where in site, and many keep asking the question, why? Refer to my story about N9EE on my new Amateur Radio News Page..

To hear what happen, run the recording..... This happen July 08, 2003 around 2 am....

957. 1x2 Calls--automatic when upgrading to Extra?

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-12 15:35:13 UTC
From: bro <grainum@yahoo.com>
Message-ID: <3F102AB1.2217A1BB@yahoo.com>
Source record: 70822

Warning: Many Questions Follow!

Hey, I'm a 'general' and if I take the extra test do I get a 1x2
automaticly "if available"?
or
do I only get if applied as a vanity?
There are 3 available 1x2's now per N4MC's Vanity HQ's database.

If I only can get one of them (or an upcoming old 1x2 expiring call) by
the vanity program, do I have to pay for it 'every year' forever?

To further complicate:
Say i've had a 1x2 for a while and I see annother comming up for grabs
can I
switch?

What is the shortest time limit of having a 1x2 systematicly given
before you can get grabby on annother?
What is the shortest time limit of having a 1x2 vanitarily begged before
you can get grabby on annother?

I know, I know, a thousand questions.
Thanks In advance to the brotherhood of amateurs AND fellow usenetters
brian

From: Guessing <Guessing@connectnet.net>
Message-ID: <bXVPa.1425$Bd5.445@fed1read01>
Source record: 70737

I still maintain it is all a matter of achieve or cop out. Make excuses or meet a challenge.
And you are correct "Code aptitude and IQ are completely unrelated" So much for the "Engineer copout"

It has nothing to do whether you or I like or dislike the code.
It has nothing to do with "Antiquated technology"
It has nothing to do with "I'll never use code"
It has everything to do with "Want HF Ham Ticket -- Pass the Test "(at the moment) If dropped is all OK with me. Times and requirements change as they should.

Black and white -- yep sure is -- society, government, et al make it that way. Don't Drink and Drive, 3 strikes you are outta here -- Pass the Test -- pretty black and white to me.

As for > > Anyone who used the code as an excuse for not becoming a ham, just
> > wasn't serious about it.

> An unsupported assertion, and untrue

I have talked with hundreds and I mean hundreds of folks and VE's over the years and here are the copouts.

I don't have time. The most common one. VE's here have found that 15 min a day EVERY day practice and in a month --90%+ pass the code test BUT the other 10% spend all night on the boob tube.

I'll never use code. (You may never have to parallel park either) (if they still require that)

I can't take tests (Has Drivers License and a BSEE)

Its a lot easier to get on CB

Its too expensive (has $1000 computer, can't afford a Swan 350 at $250)

Its so illogical (so is a job interview at times)

Notice I didn't even mention whether I am a Ham or not -- Tech no-code or Extra ---pro or anti-code -- cause that ain't got nothing to do with -- PASS THE TEST

Looks like it's about time to write JJ off as a clueless dweeb who refuses to read or even
pay attention. Otherwise he'd know how ludicrous that diatribe actually is. No one here ever
indicated that CW was anything more than another effective tool for communications
when needed, and if he was halfway awake he'd know it.

The real point here is only learnt what I had to do to get the *phone*
privileges I wanted. I never actually wanted to use CW, and this is why I
don't think it should be tested for licensing purposes. I understand that
the ARRL gives out nice certificates for those who have the burning urge
to take a code test.

The way I learnt it, I can only really copy code if I write it down, i.e.
I can't copy by ear unless it is extremely slow, and I was only copying
about 70% to get 7/10 answers right. OTOH, I had to listen to code upto
25wpm to pass 20, but 30wpm just blurs together to my ear, to where I
can't really discern any characters atall.

I don't think for a minute that I would much enjoy a QSO if I could only
copy 70%, so I would probably have to slow to 10-15wpm for a real QSO. Of
course, this means that those who only passed 13wpm multiple guess would
have to slow down to something much slower than that, maybe 5-8 wpm. As
for the 5wpm test.... you get the picture.

Don't hold your breath, though. You aren't likely to hear me on CW anytime
soon.

You know...the claim that CW "will keep you communicating when conditions
prevent you from communicating by voice or digital modes" has been made time
and time again. Time and time again there have been requests for proof of
this claim. None has been provided.

To state something does not make it so.

Likely not in some selected areas !

I heard one group on 75M talking
about BPL last night, after which a
discussion of the "pole hardware"
required to facilitate such service was
described. Two of the participants then suggested
"RF alignment tips" of saidsame future pole-mounted
BPL hardware infrastructure via application
of 12 Gauge 00-buck or 30-06.

(sounds like a good, if not brutish approach suggestion to me :)

No doubt what started ham radio was an experiment using the best of what was
around then. Perhaps you'd like to move into the most recent century, Dick.
If ham radio were "invented" today, it would never even get near CW.

Arnie, do you actually know people in EmCom who discredit CW??!! Anyone who discredits any mode of operation: CB, ham radio in all its modes,,FRS, shouting, mirror flashing, *ANYTHING*, in a moment of disaster is not credible, in my opinion.

I disagree. If someone doesn't like CW, why on earth should they be forced to train as a CW operator to get accesss to phone frequencies? This is a hobby.

> It has nothing to do with "Antiquated technology"

I don't think CW can match PSK or TOR, so it is somewhat antiquated, IMHO

Do you know why, though Kim. Morse intended his system to be 100%
automated. Sending by hand and receiving by ear only came about because
the electro-mechanical systems of the day were unreliable. This happened
even before radio was invented. So you're right, now we use computers for
data modes a chain of events like that would be impossible.

It isn't so, at least not for digital modes.

THAT'S RIGHT, genius. Better and faster and MORE ACCURATE than voice in
marginal conditions,
like it or not. It's clear you have zero experience in this area but that sure
doesn't stop you from claiming
to be the original expert!

> At lower power, perhaps ... though
> as has been pointed out before (though you continue to ignore the reality),
> plain
> old BFSK, at the same data rates as OOK Morse, has something on the order
> of a 9 dB weak signal advantage over OOK Morse.

Yes you've been hawking that for years now. So where's the beef, as you like to
say?
Where's all that original designed hardware that will do it all without dragging
a computer
along for the overhead, and hopefully keeping it functioning within the system
as intended?
You and Cecil Moore were gonna come up with all sorts of goodies for ham radio
that would
take care of all these shortcomings, remember? So far all we've seen is BS
verbiage about how
you slew the old CW dragon at Geneva.

AND, don't forget that there is MUCH more to the story. Propagation conditions
have a LOT to
play in these new technologies, an important point which you are evidently
intent on ignoring.
For one example you can google up my posts of a few years ago about trying to
copy some very
weak Europeans working PSK31 on a near-dead 20 meter band when it wasn't
possible to
lock and print the PSK, but the CW ID came through loud and clear, on all of
them! The cause
was almost certainly polar phase shift, which corrupted the PSK but affected the
CW signal not a bit!

> radio than making beeps ...

I simply don't believe you, based on your past postings. You got a Tech license
at
an FCC district office, - San Diego, I believe you said , IIRC ,
when the ONLY way you could do that was to fail the 13wpm
code test when trying for General but copying enough to qualify for 5wpm,
because Tech in that time frame was a by-mail-order only license. You
wouldn't be allowed to walk into a FCC office then and ask to take a 5wpm code
test
and the Tech written, which was the same written as General. But if you were
taking the
General and failed the 13wpm test, copying enough to qualify you for 5wpm,
they'd allow
you to go ahead and finish out the exam by taking the General written, thus
qualifying
as a Tech. You could then return later and pass the 13wpm code test and upgrade
to
General.
You shoulda did it, Carl, would have saved you lot of grief over the years.

And no, that didn't happen to me, I read about in in QST back then. When I went to the
FCC office to test, I took every ham test except the Novice which was all
the credit allowed for a Conditional General, and brought home my Extra.

Of course I could be wrong, but you could be obfuscating just to save face, too.

First, I am not code illiterate, I can operate code if I choose
to. Second, your statement of REAL radio operators is where I have
a problem with the likes of you and Larry. You have this huge ego
that unless every ham feels about code the way you do they are not
real hams. That if they choose not to use code then they are the
unwashed, the unclean. That is the problem I have with those like
you and your attitude toward other hams of your "I am superior
because I use CW" attitude.
Any ham who passes the test and obtains a license is just as much
of a REAL ham as you and Larry and like kind will ever be. Even
more so of a REAL ham if they reject the holier than thou attitude
you have.
I have nothing against the use of CW, just don't use it as some
kind of attempt to make yourself somehow appear superior because
you may prefer that mode and others may not. CW is a fine mode, no
need for you to act so stupid over it.

Well, we can all sit around thinking up technologies which wouldn't be invented
today,
and you can begin with your favorite media the boob toob (right up Kim's alley)

They have totally re-invented it.

None of which has anything to do with radiotelegraphy, a system widely used in
HF ham radio.

Alun I respect you opinions. Just like I don't like some laws (blue or otherwise) and CC&R's in the HOA in which I live -- I can express a personal emotion or opinion as you have. But my point is that thousands who hate the code have passed the code test because they had to in order to achieve their goals. If one's desire to get on HF is high enough, the code should not be a deterrent as many have proved. And they didn't like proving it.

Because the FCC sez so -- don't mix emotions with the law.
It is not a hobby -- FCC Part 97 sez it is a Service. (That ought to stir up a hornets nest!!)

FCC sez so -- you are making an excuse to avoid the requirement. Logic has nothing to do with it -- its the law. Ask a lawyer about that one. Hey I want to be a BSEE, why do I have to take History classes ????

Uh, Dick? How 'bout you describe what you would be carrying with you when
you need CW? What if an emergency happens and you are displaced from your
normal CW operating position? I'd like to see a description of the
equipment you would require to establish CW communications.

I never said I was "the original expert" ... but I have logged many hundreds
of
hours of emergency comms service in my over 25 years as a ham ... and never
had to use CW (not that anyone else in the ARES or RACES teams would have
suggested it either ...)

> > At lower power, perhaps ... though

Ah, so you have a problem with computers ... better start walking ... the average
modern vehicle has sosmething on the order of a couple of dozen or more computer
chips in it ...

> AND, don't forget that there is MUCH more to the story. Propagation conditions
> have a LOT to

<wk3cqth@wk3c.com> writes:

>OOK Morse is clearly still a viable mode of
>communications ... (to use the much-used analogy, so is horseback
>riding as a form of transcontinental transportation).

Not a good analogy. Horses are not much used on the roads and highways of America. Horses are not motor vehicles. CW/Morse is very much used on the amateur bands, and it is a radio mode just like AM, FM, SSB, etc..

Try this analogy:

Manual transmissions in motor vehicles are still viable and in use by those who prefer them - but there's no mandatory test for manual-transmission skill in order to drive a car. At least not in any state that K2UNK, K2ASP or I know of.

Manual transmissions outperform automatics in some ways, and automatics outperform manuals in some ways.
>
>It's just that it's been bypassed by more modern, more efficient means
>that that vast majority of people prefer.

The vast majority of people don't care to become hams at all - regardless of mode, or test.

"More modern, more efficient" are in the eye of the arguer. SSB is almost as old as CW/Morse - described theoretically in 1915, used on landwire carrier some years later, in revenue service on LF radio in 1927 and by hams on HF before 1934. Yet it's still in wide use by hams - just like CW. Many other services, however, have abandoned SSB, or never used it in the first place. And look what happened to "ACSSB"....

Suppose you want a mode that:

- doesn't require talking, typing, or reading
- can use very simple or very complex equipment, or almost anything in between
- can be human or machine generated and interpreted
- uses only a tiny bit of the radio spectrum

What mode that meets those criteria is "more modern and efficient" than CW/Morse?

-

Cars with automatic transmissions outsell cars with manual transmissions by about 10 to 1, last I heard. Yet manual transmissions are still available.

Should everyone have to learn how to drive a manual transmission car to get a driver's license? Even if the test is reduced to putting it in first and crawling across an empty parking lot at 5 mph?

And of that 11,000 how many do you 'spose are engineers who wouldn't
have become hams unless the code test was dropped to 5 wpm? And of
those, how many of these newly minted ham engineers will ever make any
"contribution to the service"?

"JJ" wrote ...

And your response comes because you are a ham and support CW and you just can't stand the thought that CW may not save the world someday. Go talk to your local emergency officials about how you can save the world because you can use CW and see how much importance they put on you views. So you put it to use in 1999 during Hurricane Floyd. Why? Was it the only means of communications that could get through? I seriously doubt it. I am not arguing the fact you used CW, just don't tout it as the end all to communications during the Hurricane. [40 years as a Ham] It has taught me that I have never had to use CW as the only means of communication during any emergency, and that includes disastrous tornados, hurricanes, floods, and earthquakes. It has taught me that CW is an antiquated mode and I am not silly enough to think it will be some ham nut like Dick, Larry or you that will save the world from disaster with your little code key. I am not anti CW, just anti those who claim that it will be the savior of the world and anyone who doesn't use code isn't as good a ham as Larry, Dick, and others (you too I guess). I have kown many hams that never operated CW after upgrading from Novice, and they would put Larry and Dick to shame as far as being "real" hams. Look into the future and you see Larry's skeleton sitting at his rig, hand on the code key still waiting to say the world with is CW skills. It isn't going to happen.

If you had bothered to actually read my reply, you would have known that I said it was used in conjunction with other modes, not exclusively. And yes, we used it because we were having a very hard time getting through on SSB (our primary mode), and phone lines were jammed or down. As to your assertion that "local" EMAs think CW is not important -- As a Federal EMA, I can tell you that you are dead wrong about that. When I talk to them, they are thrilled to have the additional communication tool and are impressed that we (ARS) have operators capable of it. Again, if you would have taken the time to read my reply, and after 40 years as a Ham, you would have already known this.

Arnie -

BTW, Are you and Leland related? You both use the anomalous term "code key"

>"contribution to the service"?
>
Some will, some won't.

I know a couple of engineer-ham who have made great contributions. One of them is W1RFI. Just for starters, he and other ARRL HQ. folks put together that 121 page commentary on BPL.

Visit the FCC ECFS system and see who actually filed comments on 03-104 (BPL). Particularly among the regulars here on rrap. I did, KB3EIA did...anybody else?

Of course Reply Comments are still open.

>> btw - I'm an engineer, and none of the tests were a deterrent for me.

>Heckuva lot of growth in the number of no-code Techs, though.

Not really. See below.

>So if
>the total number of hams hasn't increased, the number of hams with the
>other classes of license must have decreased accordingly in order to
>keep up. Or are guys reverse-upgrading to Technician nowadays?

Three things:

- the number of US hams has increased by about 11,000 since May of 2000

- since April 15, 2000, the FCC has been renewing Tech Pluses as Techs, and not issuing any new Tech Pluses. The number of Tech Pluses has dropped by over 61,000 since that happened.

- since April 15, 2000, the FCC has been granting Tech licenses (as opposed to Tech Pluses) to Novices who pass Element 2 or produce the relevant CSCEs, and not issuing any new Novices. The number of Novices has dropped by over 15,000 since that happened.

How many of those hams listed as Technicians in the database are not code tested, vs. those who are? Almost impossible to say.

But look at these numbers:

Total Tech and Tech Plus as of May 14, 2000: 334,254

Total Tech and Tech Plus as of June 30, 2003: 324,004

Total Novice, Tech and Tech Plus as of May 14, 2000: 383,528

Total Novice, Tech and Tech Plus as of June 30, 2003: 363,800

For a bimonthly listing of the various totals, see the thread "ARS License Numbers" and look for posts by me around the first and fifteenth of each month. That thread goes back about two years, and compares present totals to those on May 14, 2000 - one month after the restructuring changes. That date was chosen as a benchmark for a number of reasons, such as the fact that the VECs,and FCC were running a tremendous backlog in April 2000, so the numbers were far from current back then.

Yeah, right, numbers will get you a bet....ham radio takes some hardware, which
you
clearly aren't capable of hatching up in support of your "numbers", in spite of
your
longtime rants. All show and no go, that's out boy Carl.

Sure seems it's YOU that has a problem with computes, why else all the smoke and mirrors
you play and still nothing more? Numbers indeed! A few of em on some green will get you a cup
at Starbucks but here on rrap they'll get you shown up. Consider yourself exposed for what
you are.....and more accurately what you are NOT. Nothing but a numbers runner.

> .. better start walking ... the
> average

Yeah, there's where computer people actually do what they say they can. What happened to you? Got a problem actually doing all that stuff you claim to be so good at?

Read it again for accuracy this time, Carl, and unstick yourself off the old saw about what's robust. Just because you can't copy CW through noise
(nor any other way) doesn't mean no one else can.

Yep, right in character, you are. When you can't find any way to counter the facts
just slam the messenger. I was working PSK31 long before you ever were authorized
on the PSK frequencies, as though that matters. What I was doing this particular day was

monitoring, and with Digipan tuning them in isn't much of a problem in any case,
but maybe
you've been too busy rachetjawing on 20 sideband to notice.
Even you should understand that on a phase shifted signal any atmospheric phase

shifting can easily corrupt the signal while enroute. Oh well.

But it was really remarkable- all that high tech digital communicating going on
and nothing was
coming across except ancient old CW. Really neat!

"Carl R. Stevenson" wrote ...

The technical fact of the matter is that SSB is just about as efficient as it gets for voice communications. The baseband (audio frequencies) are translated to RF and back, with the result that the RF signal is no wider than required to convey the baseband bandwidth. (unless, of course you're running things into clipping and causing all sorts of intermod products) While digital voice has some advantages in some applications (particularly if one wants to use mixed media, such as VOIP links), even the best low-rate codecs require a bandwidth at least as wide as SSB and at those coding rates don't provide the same fidelity (speaker recognition, tonal quality, etc.) due to the coding involved. Yes, SSB is at least 60 years old ... but Morse is what? About 3X as old? Its not simply a matter of age ...

So tell me, Carl -- if SSB is not obsolete (as you have so adequately explained) then why do you think JJ thinks CW is? I mean it has all the same attributes as your SSB explanation -- and with less bandwidth use and lower power requirements. Seems pretty efficient to me.

Here my definition of "reasonable testing".

reasonable testing
= necessary testing
= not unnecessary testing
= not arbitrary testing
= in conformity with 5 USC 706(2)(A).

But my definition of reasonable testing is simply an
opinion, it the FCC decision that counts.

Now I hope you will accept the FCC decision
on this matter. The house light dimming,
stage right, ...

>wanted to or because they only had CW capabilities, but because
>it was the ONLY mode that could get through.

Well, that kinda slants the playing field, but here goes.

Back in '98 there were some pretty bad and widespread ice storms in the
Northeast, particularly upper central New York State. CW was used by hams for
communications because 'phone just wouldn't get through reliably.

The ice storms had hit a wide area, bringing down electric power and
communications wires and blocking roads with falen trees and tree limbs. And
antennas. The affected area was so large, and sustained so much damage, that
power was off in some areas for many days, stretching into weeks. Folks with
generators found themselves running short of fuel, and electric power was off
over such a wide area that finding an open gas station where you could buy more
was a real problem. If you had any money, that is, because the ATMs didn't
work, and most businesses were closed anyway.

End result was that a lot of stations were on the air with battery power and
QRP, using makeshift antennas. Even those with 100+ watts of SSB had a hard
time because the auroral distortion was often very bad. SSB was the preferred
mode that did a lot of the work, but there were times when stations had to
shift to CW in order to get through.

Data modes? Some stations had 'em, many didn't. Those who did often didn't have
power to run the computer. And in a net operation, everybody needs a common
mode.

VHF/UHF? The terrain and repeater density did not permit reliable coverage of
the entire affected area. And some of the repeaters were off the air due to
storm damage or power failure.

Solar power? Check out how many hours a day the sun shines in Syracuse during
January. Wind power? Great - if the mill survives the ice storm.

FEMA and other agencies? Sure, they moved in and did a lot, but they were
stretched thin due to the wide area of the emergency, the many blocked roads,
and the terrible weather conditions.

Now it can be argued that those involved should have been more prepared, by having more supplies on hand, more people involved, more generating capacity, data modes, etc. While true, there's always a limit to what can be stored, and how much of each problem to expect.

Emergencies take all forms, and conditions that constitute a major emergency in one area (say, a foot of snow and 10 degree F temperatures in Atlanta, GA) are barely noticed by people somewhere else (same conditions in Rochester, NY). If everyone is adequately prepared, it really isn't an emergency, is it?

All this brought up some interesting questions, llike: which data mode should be the standard? Baudot RTTY? ASCII? PSK-31? Some might have worked through the auroral conditions, while others would be useless due to the distortion.

And that's just one incident. Plenty of others since hams began using 'phone.

Does all of this somehow prove that EVERY ham MUST pass a code test because someday they MIGHT be in an emergency situation where code skill is needed? Of course not! Were that the case, we'd not only need code testing, but also retesting, to be sure that all hams could still do it.

But to say that CW isn't used by hams in emergencies just isn't factual.

JJ you really don't need to display yourself as a code illiterate, just because
you're
irritated that someone would actually advocate using it on the air. You don't have
to.
But you can't seem to help yourself. If you've never observed radio operators - REAL

radio operators, using code in a very efficient way, that's just your loss. No need
for you to
act so stupid over it.

Some people can, others "just don't want to". You can be one of those if you wish.

If the US dispenses with the code test, Techs should get the same as the
Tech+ as that would be the simplest and most appropriate change.

Novices should stay exactly as they are now. They haven't passed the Tech
written and should NOT get a free upgrade to Tech. It simply isn't
appropriate. Novices have some HF privileges already anyway.

> > separation.

If they merge the Techs into the priveleges of Tech+, all license classes
will have some HF privileges.

The simplest overall approach is to simply leave the rest of the classes
alone except for dropping the code requirement. This requires the least
amount of rule changes and paperwork changes.

I'm sure that's true for some. I'm also sure it's not true for all.
The average computer-literate, technically involved people tend to be
able to, for example, assemble a computer from its basic elements
(case, power supply, motherboard and perhaps some daughterboards),
connect the peripherals, install an OS and other software without a
dozen calls to a tech support hotline, and end up with a viable
working machine.

Folks who can do this are technically involved in comparison to the
folks who don't even know which port the monitor plugs into. They
aren't technically involved in comparison to the guy who designed the
motherboard in the first place. However, even in the industry, very
few people do component level repairs on motherboards and
daughterboards any more. What of it? Who do you know that's designed
and built a multi-band HF rig lately? Some have, of course...most of
them work for Kenwood, Icom, Yaesu, Alinco, etc.

Of those that are able to do component level repairs on computer
equipment, they probably have much of the knowledge needed to pass our
written exams, except they lack the specialized knowledge of RF.
Certainly, though, it would seem they have the capacity to learn it -
but when the first thing we do is hit them with something over a
hundred years old and tell them this is our lowest common denominator,
I have no doubt that it causes a lot of people to think, "@#$&%^*
that!" and find another hobby...perhaps they already have one.

>> You made my point.
>
>Bill you have been quite consistant about missing the entire point. When there is no
>code test most hams won't learn Morse code.

I can't substantiate this statistically off the top of my head, but it
wouldn't surprise me to learn that a majority of hams already aren't
all that proficient with Morse to begin with. I was forced to learn it
to upgrade from Tech to General, but I learned it only well enough to
pass the test (by correctly copying the phrase "My QTH is Malibu,
California." rather than by answering the multiple choice questions -
since the comma and period count as two characters each, that gave me
one minute of solid copy), and basically haven't used it since.

I did try once...used the club station, went down in the lower portion
of 15 where I frequently hear some slower CW ops...send "CQ CQ CQ DE"
and my callsign twice, at about 5 WPM because I didn't want to send
faster than I could copy...then realized that in the amount of time it
took me to do that I could have already had a contact in the log on
phone...and that I did not and do not have the patience for CW.

I'd have a hard time believing there aren't a heck of a lot of 5 WPM
Generals and Extras out there who've gone through the same thing. Add
those to the no-code Techs and you might well be pretty close to half
the entire ham population in the U.S. for all I know.

>I know that taxes you not a bit, so that means that you don't care whether
>or not hams will be losing it as a viable mode.

Now it is you who might be missing the point. The code test will be
gone - as someone else in this NG likes to say, the government life
support system will be turned off. That, in and of itself, does not
guarantee that ham radio will lose CW as a viable mode, it only
guarantees that if the ARS is to keep CW as a viable mode, it behooves
those who want it to continue as such to find another way to get hams
to learn the code.

Now, to repeat the point I have been trying to make in this thread. On the one hand we have guys like Arnie who will respect a fellow ham as a fellow ham, regardless of whether that ham can do 50 WPM or zero...will encourage people to learn the code and use the mode, bend over backwards to help them do it, slow down his own sending so they can copy it at their own speed, and just generally being reasonable and friendly and giving people every encouragement.

On the other hand, we have guys snarling like angry dogs at people for doing what you yourself would have done if you'd had the choice at the time...people calling guys lazy, good for nothing, saying they aren't "real" hams, and just generally being unreasonable, unfriendly, and in some cases hypocritical as well.

Caught in the middle will be a whole generation of new hams who will decide for themselves if they want to learn the code or not, sitting there on the fence between the folks continuing the CW tradition in ham radio and the folks who want nothing to do with Morse. The folks on the no-code side will welcome them into the hobby regardless. The folks on the other side...well...it looks good over where Arnie is, but with all those snarling dogs over there, I dunno...

What I guess I'm trying to say is, we need less snarling dogs and more people looking for a reasonable approach to the problem.

>Which shows how shortsighted you are, right along with the rest of NCI.
>And yes, FCC too. Of course they have far bigger fish to fry than to worry
>about a trivial detail involving the ARS.

First of all, if it's so trivial, why is everybody getting their panties in a bunch about it?

Secondly, I think the ARS itself has bigger fish to fry. To name just one, BPL used to mean Brass Pounders' League. Now it means the noise floor on your HF rig is about to go through the ceiling and put your S-meter into orbit.

>The least time they must spend on ARS issues the better for them,
>whatever the end result.

Can't say as I really blame them. Everybody wants to be the fire department in a town with no fires. Aside from the political appointees, FCC is men and women who get up in the morning, go to work, then go home at the end of the day, same as I do. I do what I can to make my job easier, what makes them any different? So, FCC is not going to solve the problem for us. Care to hazard a WAG as to who's left to come up with a solution?

>communications conditions.

Morse is only one such advantage that hams have. A few others:

1. When disaster renders the normal communications systems of local
governmental agencies inoperable, it needs to be repaired or replaced.
There are procedures to be followed to spend money to buy new gear or
have the old gear repaired. Ever try to solicit bids for a new radio
system when your town hall is flooded halfway to the ceiling? I don't
recommend it.

Enter ham radio operators, who collectively have literally tons of
radio gear, along with methods of powering it, stockpiled at no
expense to the taxpayers. We're the built-in backups in a community,
and that's true whether we use SSB, CW, or carrier pigeons. As long as
we get the job done.

2. Most public safety professionals (by which I mean law enforcement,
fire supression, EMS, and SAR personnel) know precisely this about the
radios they use on the job: Either it works or it doesn't. Either the
city cops can talk directly to the county sheriffs or they can't.
Change to a different radio? Sure...just get a new radio...see item
number (1) above for the problem with that.

Enter ham radio operators, who, if one frequency doesn't work, will
keep trying another, and then another, and then another, until we find
one that does work. It's intrinsic to the way we operate, our
equipment is designed with that in mind (unlike most commercial gear
used by public safety professionals, which is designed with entirely
different considerations in mind). We think nothing of it, but to the
average cop or fireman with a radio that has one repeater frequency
and one talkaround (both on the same band) it's wizardry.

Want me to continue?

>Morse/CW does this in ways which you most

I think it's on both sides. I also think it's rather silly to keep arguing good-thing/bad-thing at this point. Regardless of what you may think or what I may think, or Arnie or Kim or anyone else, I think we can all predict what's eventually going to happen. Therefore, the subject for debate ought to be what we're going to do when it does.

There are other possible explanations for this other than mode
selection. That could also happen because the CW guys were "running"
QSOs while the phone guys were hunting and pouncing. It could also be
because the CW ops were simply more experienced contesters and, for
all we know, could have also outdone the SSB guys by ten to one on SSB
as well.

OTOH, you could be right.... :-)

Why? Because there are no more 13- and 20-WPM code tests?

Must be, because the material in the question pools now is pretty much
the same material that was in there before restructuring. It's
organized somewhat differently, but it's still the same basic
stuff...same cards shuffled in a different order. Same game being
played with those cards, too. Only thing different is that you don't
seem to like the hand you've been dealt this time around.

Can't win 'em all, Larry.

>self-serving evaluation made by a person with no qualification to render
>such a judgment. I challenge you to provide some documentary evidence
>that knowledge of the Morse code is somehow detrimental to the "image"
>of amateur radio operators.

Picture the local ham radio club at their Field Day setup in a local public park. Along comes some members of the general public curious about what's going on. The club's PIO does his job, hands out the literature from ARRL that talks about working through satellites using handheld equipment, about digital modes using computers, about packet, about disaster preparedness.

Then he takes them over to the radios and there sits a small group of guys with headsets on (or worse, without headsets on and bitching at everybody to be quiet so they can hear) doing basically the same thing they did over hardwired telegraph systems 130 years ago.

We tell people we're on the cutting edge of technology, then put our best foot forward with something that's almost as old as dinosaur dung...but doesn't smell quite as bad.

Said members of the general public, knowing a hypocrite when they see one, whip out their can of BS repellant as they beat a hasty retreat from the area before their conversation can arouse the ire of the CW ops again. As they're getting into their car, one remarks, "We could have seen the same thing down at the railroad museum!"

Moral of the story: as is the case with fishing, your success rate is largely determined by what you use for bait. We're using the wrong bait. Our success rate at attracting new hams is the documentary evidence, and we've ignored it long enough.

This is not an argument against learning Morse and encouraging people
to develop CW operating skills. However, we can do that by promoting
the merits of CW *after* we get them to bite first on the more modern
technology that we routinely use in the ARS.

>>I don't have to learn <Morse> code just so I can prove I have the ability to
>>learn <Morse> code. I have learned other skills that are just as difficult.

>compares with a proven, effective communications skill such as Morse
>code proficiency as applied within the ARS. Kindly leave out the usual
>apples-to-oranges comparisons to military or commercial radio services.

He didn't say communications skills, just skills.

1. What's more difficult to learn - copying Morse at 5 WPM or flying
the space shuttle?

2. How many current astronauts are no-code Technicians and how many
are Extras that took a 20 WPM code test?

Go ahead, tell us the no-code astronauts are lazy because they can't
meaure up to your standards WRT using CW. Maybe if enough of them hear
you, you can be singlehandedly responsible for putting an end to ham
radio operation from space.

>>Another reason is the "benefit" is not worth the effort. I would put effort

>to the building and operation of simple station equipment, eventually
>advancing to more complex projects, and even inspiring formal education
>in electronics, to simply showing the New Age No-Code Tech which button
>to push to make his HT work.

And to help right this wrong, you're going to volunteer to show up at
the next club meeting and show everybody how to construct a modern,
state-of-the-art, all-mode, all-band transciever? Very good!

>If any honest and objective evaluation of
>the technical skill levels of ham radio operators were made from an
>historical perspective, it would show that code proficiency testing certainly
>could be linked to the advancement of technical knowledge, whereas the
>elimination thereof has led to a decline in overall technical involvement.

Then why is it that guys who have been hams for fifty years sometimes
need help programming a new 2m handheld?

>Whatever new people enter the ARS in the no-code testing future certainly
>face a daunting task of proving the claims of those who have, throughout
>the code testing debate, attempted to link Morse code knowledge with
>technical ignorance. We shall see what the future holds.

You yourself are linking Morse code knowledge with technical
ignorance! You just said yourself one paragraph earlier (and I cut and
paste again here):

>If any honest and objective evaluation of
>the technical skill levels of ham radio operators were made from an
>historical perspective, it would show that code proficiency testing certainly
>could be linked to the advancement of technical knowledge, whereas the
>elimination thereof has led to a decline in overall technical involvement.

As soon as a no-code Technician learns something (anything at all)
about radio, he or she has immediately disproven your claim. He/she
has advanced his/her own technical knowledge without benefit of any
knowledge of Morse code. Which means that either:

1. Every no-code Tech who has upgraded to General, Advanced, or Extra
in the last 25 years already knew everything they needed to know to
pass the writtens and only needed to learn the code in order to
upgrade, OR

2. Every no-code Tech who has upgraded to General, Advanced, or Extra
in the last 25 years and still holds a license is documented evidence
in the FCC license database that the neither the possession nor the
lack of code proficiency has any bearing on technical
proficiency...which is pretty much what FCC concluded in 1999. It's
now 2003, so you're about four years behind the rest of us.

>
>You don't have to take history classes in some schools
>to get a BSEE.

Correct...but, in my opinion, still misses one major point, namely
that an amateur radio license and a BSEE are entirely different.

A BSEE is a degree awarded at the *end* of an academic pursuit for the
purpose of recognizing successful completion thereof and to certify
that the recipient has acquired significant knowledge in the field. By
the time you get a BSEE, you're supposed to have forgotten more about
electrical engineering than most people have ever learned. It'll get
you a decent job even if you bluffed your way through and really don't
know shinola. It's supposedly proof of an accomplishment, that being a
well-rounded education, with particular emphasis in a specialized
field. That's why most (not all) institutes of higher learning require
classes in things like history, literature, and other stuff that would
seem unrelated.

If I were Larry Roll, I'd lament that I've seen so many people with
college degrees that still couldn't fill out a job application
properly, that the requirements for a college degree must have been
seriously dumbed down over the past thirty years, but I'm not, so I
won't. Nevertheless, I have worked with people who held engineering
degrees yet could not compose a coherent memo for circulation in their
own department.

An amateur radio license is a document awarded at the *beginning* of
one's participation in the hobby for the purpose of granting operating
privileges and to certify that the recipient has demonstrated entry
level knowledge at the class of license thus received. It won't get
you a job bagging groceries. As for the accomplishments, those come
afterward when you actually start to make use of the privileges the
license conveys by putting Qs in your logbook. It is not, and is not
intended to be, comparable to a college degree...no matter how much
some people would like it to be so.

I wonder if any of the engineers who worked on developing surface mount components were hams...or the engineers who took computer CPU chip clock speeds from mHz into gHz. Oh, and didn't the hams who happen to be NASA Mission Specialists, some of whom undoubtedly have engineering degrees and who took ham equipment into space, contribute anything to the hobby by doing so?

Better yet is an emergency communications organization that recognizes
the varied skills of its members and institutes systems that utilize
those skills where they can do the most good. If a group of, say,
forty operators has ten accomplished CW operators and thirty ops whose
CW skills aren't up to snuff for emergency use, so be it. The thirty
ops who lack CW skills can still train to participate in voice comms,
conduct tactical comms on VHF, etc. If a person has a useful skill and
is willing to volunteer, you find a way for them to contribute. You
don't turn away volunteers, because when the time comes that you need
your team members, some will be themselves be victims of the disaster,
some will be unavailable because they're at work, some will need to
take care of family members, and so forth.

>If
>those operating practices don't include the CW mode, it is up to

In golf, this is known as playing the ball where it lies. In cards,
it's called playing the hand you're dealt. In emergency management,
the buzzword is interoperability - and it's one of the things we hams
bring to the table that makes us valuable assets when the chips (or
the local communications systems) are down.

>DIGRESSION MODE
>ON: if the failure of participants to know and use CW is an issue, it is

>known and to try and effect change through POSITIVE action. In the meantime
>it behooves a good participant to fail to make enemies because things aren't
>as they wish. DIGRESSION MODE OFF.

I don't think that's a digression at all. It's simply having good leadership skills, and keeping a positive attitude...and your point is well taken, in that there are some individuals whose attitude towards their fellow hams is anything but positive - unfortunately.

>2. A good radio amateur operator, who is familiar with EmCom, is also
>familiar with the current trends in the service of emergency communication
>provision. Again, one may not "like" the current trend but, to criticize
>and be disgruntled about it hinders the efficacy of providing excellent
>communication service.

There is nothing wrong with constructive criticism, so long as it is done in a positive manner. For example, what if the current trend in your area is for emergency management personnel to rely on cell phones as a backup to their radio systems? I don't "like" that trend and will certainly criticize it, immediately and as often as necessary to get the point across. I will not, however, refer to said emergency managers as "maroons" - especially not in a public forum!

>DIGRESSION MODE ON: A good example would be the
>very attitudes that we often see exhibited here in this newsgroup by folks
>such as Dick and Larry. Now, they'll tell you that [paraphrasing here]

>in real life.

Of course not. If they said to someone at a club meeting some of the things they've said to people in this NG, they'd probably earn themselves a punch in the nose. Now, I dunno about Dick, but Larry likes his nose. He sends CW with his nose on the key while his left hand is tuning and his right hand is writing in the logbook. :-)

>I say to anyone here, that the actions in this newsgroup are
>well known locally to your fellow amateurs. I cannot tell you how many

>see here by my opinions and some are not. The point is that most of us here
>in this newsgroup are "offensive," in some way or another, to someone who
>simply reads posts.

That's common sense, of course, because whatever side you take on an issue, you're going to be in disagreement with the folks on the other side. However, since common sense isn't really all that common, some will exacerbate the situation, going beyond simply stating their opinions and allow discussions to degenerate into name-calling, personal attacks on the messenger instead of debating the message, and other common fallacies that are as old as discussion boards on landline BBS systems.

> DIGRESSION MODE OFF. So, if someone exhibits offensive

Hindered? How about nonexistent?

>If
>the use of CW on emergency/disaster communication nets has diminished, it is
>paramount to a qualified radio amateur emergency communicator to learn and
>become familiar with whatever mode of operation is currently the "popular"
>trend. It's that simple.

I was monitoring a MARS net a few years back, that was being conducted
in some rather lousy band conditions. One station tried to check into
this net using CW because the ops couldn't get through to the NCS
using SSB. The NCS told them that CW was not a valid operating mode
for checking into a MARS net. Draw your own conclusions.

>4. I daresay anyone--not just radio amateur emergency communicators--who is
>familiar with emergency/disaster communication, knows that the best mode of
>operation is going to be one that most--preferably all--participants in the
>communication process are familiar with--*regardless* of how well the mode
>utilizes bandwidth or how well the mode can be implemented, etc.

This goes back to what I said earlier about interoperability. This
consideration became a major concern in the aftermath of the terrorist
attacks on September 11, 2001 and remains an important one in the mind
of any savvy emergency communicator or emergency manager. FEMA has a
publication for emergency managers dealing with amateur radio - I have
a copy in my personal library - and interoperability is one of the
things mentioned as a desirable asset that hams are able to provide.
It goes without saying that anything which compromises
interoperability is detrimental to the overall operation.

>To try to
>"force" the issue of CW onto radio amateurs may be admirable in some cases,
>it is fatal to a good emergency/disaster communication effort *UNLESS* all
>communication providers are "on board" with knowing and using CW
>effectively.

Not necessarily. A CW net can be established for the purpose of moving
health and welfare traffic in and out of the affected area on HF,
while tactical communications for establishing shelters and doing
damage assessment are done on VHF FM. Obviously, the folks working VHF

FM don't need to know shinola about CW. They do, however, need to know how to behave in a directed net, among other things.

>In today's emergency/disaster communication "market" the CW
>skill is little recognized and certainly not used in many circumstances.

Nevertheless, as both you and Arnie have already pointed out in this NG, one should not discount any available means of communication. I'm sure that if Arnie has a dozen CW ops around he's going to use them. If, at the same time, he has a dozen no-code Techs or 5 WPM Generals (like me for example) around he's going to use them too, but not as CW ops. I'm not too good with CW, but I am pretty good at tactical comms.

>DIGRESSION MODE ON: once the communication emergency/disaster operation is
>under way, of course, CW nets for passing HW traffic are critical to the
>implementation of effective transmission and delivery of messages to those
>who would otherwise be "clogging" the resources of responders. It is at
>*this* level that folks such as Dick and Larry should be recruiting
>individuals. DIGRESSION MODE OFF.

OBSERVATION MODE ON: Unfortunately, Dick and Larry aren't recruiting anyone; quite the opposite, in fact. When I first became an ARES member, I was a Technician sans code. If I'd arrived at that ARES meeting and found Dick and Larry in charge, I'd have been back out the door so fast that the suction would have pulled half a dozen other guys right out the door along with me. License class bigotry and operating mode bigotry do no good for any facet of amateur radio, least of all our emergency and public service communications groups. OBSERVATION MODE OFF.

>5. Current trends in the provision of emergency/disaster communication are
>utilizing many modes. The political arguments are beginning to erode and
>the stigma associated with utilizing all available radio services is
>beginning to fade.

Having two skyscrapers collapsing around you while the police can't talk to the fire department, which can't talk to the EMS personnel, which can't talk to the Port Authority police, which can't talk to the Feds, which can't even talk to each other, tends to do that for ya...

>The recognition of this is limited to those above the
>level of folks such as Dick and Larry, who are "stuck" in the world of CW so
>obsessively that they cannot and will not accept what changes are taking
>place and will continue to take place.

It's too bad that it took an incident resulting in the deaths of a few thousand people for this recognition to happen, but sometimes I do wonder if some people realize what they're saying. "CW is like learning another language" for example...okay, fine, but what happens if I get on the radio and tell the fire department that a pumper is needed and such-and-such location because the ice storm just caused a tree to collapse onto the roof of a school building, bringing down power lines along with it, and now the school's on fire and kids are

trapped, and because I happen to like German and think everybody
should learn it, I make this report in German. Great if the fire
dispatcher speaks German. Not a good idea if she doesn't...oh, excuse
me, I mean, if she's a no-good-for-nothing who's too lazy to learn
German and is thus less qualified as a communicator than I am.

> As has often been implied by
>comments in this newsgroup: while "they" are stuck in their world, the rest
>of the world is moving on and providing a great service--as one of the
>tenets of amateur radio is realized.

I dunno if I'd go so far as to suggest that accomplished CW ops are
going to be left behind as the rest of the world moves on without
them, because there's nothing stopping someone who's already developed
good CW skills from learning additional skills useful in other
operating modes. The question is whether or not an individual is
prepared to put those skills to use when they're needed.

Our EOC has HF, VHF, and UHF gear, packet, a couple of repeaters,
emergency power from a diesel generator, and both a straight key and a
bug for CW ops to use. There's more than one radio for each. There's a
scanner. We also have SSTV capability, so that a ham in the field with
a digital camera and a laptop computer in his car can take pictures of
a disaster scene and transmit them back to the EOC over the air so
that officials there can see for themselves what's going on, rather
than having to haul everybody down to the scene for a first-hand look.
Of course, that means the ham in the field needs the digital camera
and needs to be able to power the laptop in the car (or once the
battery in the laptop runs down, goodbye to that capability). That
means adding an inverter to your jump kit if your laptop doesn't run
on 13.8 VDC. Some guys make me wonder if there is anything in their
jump kits other than a key, a QRP CW rig and a battery. I hope there
is, but the way some folks tell it there's only one operating mode and
CW is it. There's more to ham radio than that - if there wasn't, I for
one wouldn't be here - and there's a lot more to emergency and public
service communications than that. CW is a useful skill, but it isn't
the only useful skill.

>There's loads of other not-so-ham-radio-related items that could be brought
>up about how folks such as Dick and Larry have missed out; those that deal
>with the leadership, recruitment, education, organizational, motivation, and
>process of emergency communication.
>
>But you good emergency/disaster communication folks already know them. ;)

Yes we do, and I just mentioned a few of them. Thanks for recognizing
this fact, though.

I'm sure that's true for some. I'm also sure it's not true for all.
The average computer-literate, technically involved people tend to be
able to, for example, assemble a computer from its basic elements
(case, power supply, motherboard and perhaps some daughterboards),
connect the peripherals, install an OS and other software without a
dozen calls to a tech support hotline, and end up with a viable
working machine.

Folks who can do this are technically involved in comparison to the
folks who don't even know which port the monitor plugs into. They
aren't technically involved in comparison to the guy who designed the
motherboard in the first place. However, even in the industry, very
few people do component level repairs on motherboards and
daughterboards any more. What of it? Who do you know that's designed
and built a multi-band HF rig lately? Some have, of course...most of
them work for Kenwood, Icom, Yaesu, Alinco, etc.

Of those that are able to do component level repairs on computer
equipment, they probably have much of the knowledge needed to pass our
written exams, except they lack the specialized knowledge of RF.
Certainly, though, it would seem they have the capacity to learn it -
but when the first thing we do is hit them with something over a
hundred years old and tell them this is our lowest common denominator,
I have no doubt that it causes a lot of people to think, "@#$&%^*
that!" and find another hobby...perhaps they already have one.

>> You made my point.
>
>Bill you have been quite consistant about missing the entire point. When there is no
>code test most hams won't learn Morse code.

I can't substantiate this statistically off the top of my head, but it
wouldn't surprise me to learn that a majority of hams already aren't
all that proficient with Morse to begin with. I was forced to learn it
to upgrade from Tech to General, but I learned it only well enough to
pass the test (by correctly copying the phrase "My QTH is Malibu,
California." rather than by answering the multiple choice questions -
since the comma and period count as two characters each, that gave me
one minute of solid copy), and basically haven't used it since.

I did try once...used the club station, went down in the lower portion
of 15 where I frequently hear some slower CW ops...send "CQ CQ CQ DE"
and my callsign twice, at about 5 WPM because I didn't want to send
faster than I could copy...then realized that in the amount of time it
took me to do that I could have already had a contact in the log on
phone...and that I did not and do not have the patience for CW.

I'd have a hard time believing there aren't a heck of a lot of 5 WPM
Generals and Extras out there who've gone through the same thing. Add
those to the no-code Techs and you might well be pretty close to half
the entire ham population in the U.S. for all I know.

>I know that taxes you not a bit, so that means that you don't care whether
>or not hams will be losing it as a viable mode.

Now it is you who might be missing the point. The code test will be
gone - as someone else in this NG likes to say, the government life
support system will be turned off. That, in and of itself, does not
guarantee that ham radio will lose CW as a viable mode, it only
guarantees that if the ARS is to keep CW as a viable mode, it behooves
those who want it to continue as such to find another way to get hams
to learn the code.

Now, to repeat the point I have been trying to make in this thread. On the one hand we have guys like Arnie who will respect a fellow ham as a fellow ham, regardless of whether that ham can do 50 WPM or zero...will encourage people to learn the code and use the mode, bend over backwards to help them do it, slow down his own sending so they can copy it at their own speed, and just generally being reasonable and friendly and giving people every encouragement.

On the other hand, we have guys snarling like angry dogs at people for doing what you yourself would have done if you'd had the choice at the time...people calling guys lazy, good for nothing, saying they aren't "real" hams, and just generally being unreasonable, unfriendly, and in some cases hypocritical as well.

Caught in the middle will be a whole generation of new hams who will decide for themselves if they want to learn the code or not, sitting there on the fence between the folks continuing the CW tradition in ham radio and the folks who want nothing to do with Morse. The folks on the no-code side will welcome them into the hobby regardless. The folks on the other side...well...it looks good over where Arnie is, but with all those snarling dogs over there, I dunno...

What I guess I'm trying to say is, we need less snarling dogs and more people looking for a reasonable approach to the problem.

>Which shows how shortsighted you are, right along with the rest of NCI.
>And yes, FCC too. Of course they have far bigger fish to fry than to worry
>about a trivial detail involving the ARS.

First of all, if it's so trivial, why is everybody getting their panties in a bunch about it?

Secondly, I think the ARS itself has bigger fish to fry. To name just one, BPL used to mean Brass Pounders' League. Now it means the noise floor on your HF rig is about to go through the ceiling and put your S-meter into orbit.

>The least time they must spend on ARS issues the better for them,
>whatever the end result.

Can't say as I really blame them. Everybody wants to be the fire department in a town with no fires. Aside from the political appointees, FCC is men and women who get up in the morning, go to work, then go home at the end of the day, same as I do. I do what I can to make my job easier, what makes them any different? So, FCC is not going to solve the problem for us. Care to hazard a WAG as to who's left to come up with a solution?

>communications conditions.

Morse is only one such advantage that hams have. A few others:

1. When disaster renders the normal communications systems of local
governmental agencies inoperable, it needs to be repaired or replaced.
There are procedures to be followed to spend money to buy new gear or
have the old gear repaired. Ever try to solicit bids for a new radio
system when your town hall is flooded halfway to the ceiling? I don't
recommend it.

Enter ham radio operators, who collectively have literally tons of
radio gear, along with methods of powering it, stockpiled at no
expense to the taxpayers. We're the built-in backups in a community,
and that's true whether we use SSB, CW, or carrier pigeons. As long as
we get the job done.

2. Most public safety professionals (by which I mean law enforcement,
fire supression, EMS, and SAR personnel) know precisely this about the
radios they use on the job: Either it works or it doesn't. Either the
city cops can talk directly to the county sheriffs or they can't.
Change to a different radio? Sure...just get a new radio...see item
number (1) above for the problem with that.

Enter ham radio operators, who, if one frequency doesn't work, will
keep trying another, and then another, and then another, until we find
one that does work. It's intrinsic to the way we operate, our
equipment is designed with that in mind (unlike most commercial gear
used by public safety professionals, which is designed with entirely
different considerations in mind). We think nothing of it, but to the
average cop or fireman with a radio that has one repeater frequency
and one talkaround (both on the same band) it's wizardry.

Want me to continue?

>Morse/CW does this in ways which you most

I think it's on both sides. I also think it's rather silly to keep arguing good-thing/bad-thing at this point. Regardless of what you may think or what I may think, or Arnie or Kim or anyone else, I think we can all predict what's eventually going to happen. Therefore, the subject for debate ought to be what we're going to do when it does.

There are other possible explanations for this other than mode
selection. That could also happen because the CW guys were "running"
QSOs while the phone guys were hunting and pouncing. It could also be
because the CW ops were simply more experienced contesters and, for
all we know, could have also outdone the SSB guys by ten to one on SSB
as well.

OTOH, you could be right.... :-)

Why? Because there are no more 13- and 20-WPM code tests?

Must be, because the material in the question pools now is pretty much
the same material that was in there before restructuring. It's
organized somewhat differently, but it's still the same basic
stuff...same cards shuffled in a different order. Same game being
played with those cards, too. Only thing different is that you don't
seem to like the hand you've been dealt this time around.

Can't win 'em all, Larry.

Agreed.

>However, in this
>New Age of a generally dumbed-down society, that's all it took!

What?

Oh, yes, of course! Vipul got WRC to reqrite S.25 singlehandedly, all by himself, nobody else had anything to do with it. All the nations that are signatories to the treaty got together and changed the international requirement on his say-so alone. Stunning feat of world leadership on his part...now if we could only get him to go to the UN and argue on behalf of world peace.....

>>Another reason is image. It shows that you put

>self-serving evaluation made by a person with no qualification to render
>such a judgment. I challenge you to provide some documentary evidence
>that knowledge of the Morse code is somehow detrimental to the "image"
>of amateur radio operators.

Picture the local ham radio club at their Field Day setup in a local public park. Along comes some members of the general public curious about what's going on. The club's PIO does his job, hands out the literature from ARRL that talks about working through satellites using handheld equipment, about digital modes using computers, about packet, about disaster preparedness.

Then he takes them over to the radios and there sits a small group of guys with headsets on (or worse, without headsets on and bitching at everybody to be quiet so they can hear) doing basically the same thing they did over hardwired telegraph systems 130 years ago.

We tell people we're on the cutting edge of technology, then put our best foot forward with something that's almost as old as dinosaur dung...but doesn't smell quite as bad.

Said members of the general public, knowing a hypocrite when they see one, whip out their can of BS repellant as they beat a hasty retreat from the area before their conversation can arouse the ire of the CW ops again. As they're getting into their car, one remarks, "We could have seen the same thing down at the railroad museum!"

Moral of the story: as is the case with fishing, your success rate is largely determined by what you use for bait. We're using the wrong bait. Our success rate at attracting new hams is the documentary evidence, and we've ignored it long enough.

This is not an argument against learning Morse and encouraging people
to develop CW operating skills. However, we can do that by promoting
the merits of CW *after* we get them to bite first on the more modern
technology that we routinely use in the ARS.

>>I don't have to learn <Morse> code just so I can prove I have the ability to
>>learn <Morse> code. I have learned other skills that are just as difficult.
>
>Name one. Just one. Please relate how this skill to which you refer
>compares with a proven, effective communications skill such as Morse
>code proficiency as applied within the ARS. Kindly leave out the usual
>apples-to-oranges comparisons to military or commercial radio services.

He didn't say communications skills, just skills.

1. What's more difficult to learn - copying Morse at 5 WPM or flying
the space shuttle?

2. How many current astronauts are no-code Technicians and how many
are Extras that took a 20 WPM code test?

Go ahead, tell us the no-code astronauts are lazy because they can't
meaure up to your standards WRT using CW. Maybe if enough of them hear
you, you can be singlehandedly responsible for putting an end to ham
radio operation from space.

>>Another reason is the "benefit" is not worth the effort. I would put effort
>>into those because I can use those skills in <real> life. I cannot use
>><Morse> code.
>
>Again, this is a judgment that you are not qualified to make. The proof
>is your own admission that you cannot use the Morse code. If you could,

And to help right this wrong, you're going to volunteer to show up at
the next club meeting and show everybody how to construct a modern,
state-of-the-art, all-mode, all-band transciever? Very good!

>If any honest and objective evaluation of
>the technical skill levels of ham radio operators were made from an
>historical perspective, it would show that code proficiency testing certainly
>could be linked to the advancement of technical knowledge, whereas the
>elimination thereof has led to a decline in overall technical involvement.

Then why is it that guys who have been hams for fifty years sometimes
need help programming a new 2m handheld?

>Whatever new people enter the ARS in the no-code testing future certainly
>face a daunting task of proving the claims of those who have, throughout
>the code testing debate, attempted to link Morse code knowledge with
>technical ignorance. We shall see what the future holds.

You yourself are linking Morse code knowledge with technical
ignorance! You just said yourself one paragraph earlier (and I cut and
paste again here):

>If any honest and objective evaluation of
>the technical skill levels of ham radio operators were made from an
>historical perspective, it would show that code proficiency testing certainly
>could be linked to the advancement of technical knowledge, whereas the
>elimination thereof has led to a decline in overall technical involvement.

As soon as a no-code Technician learns something (anything at all)
about radio, he or she has immediately disproven your claim. He/she
has advanced his/her own technical knowledge without benefit of any
knowledge of Morse code. Which means that either:

1. Every no-code Tech who has upgraded to General, Advanced, or Extra
in the last 25 years already knew everything they needed to know to
pass the writtens and only needed to learn the code in order to
upgrade, OR

2. Every no-code Tech who has upgraded to General, Advanced, or Extra
in the last 25 years and still holds a license is documented evidence
in the FCC license database that the neither the possession nor the
lack of code proficiency has any bearing on technical
proficiency...which is pretty much what FCC concluded in 1999. It's
now 2003, so you're about four years behind the rest of us.

>> want to be a BSEE, why do I have to take History classes ????
>
>You don't have to take history classes in some schools
>to get a BSEE.

Correct...but, in my opinion, still misses one major point, namely
that an amateur radio license and a BSEE are entirely different.

A BSEE is a degree awarded at the *end* of an academic pursuit for the
purpose of recognizing successful completion thereof and to certify
that the recipient has acquired significant knowledge in the field. By
the time you get a BSEE, you're supposed to have forgotten more about
electrical engineering than most people have ever learned. It'll get
you a decent job even if you bluffed your way through and really don't
know shinola. It's supposedly proof of an accomplishment, that being a
well-rounded education, with particular emphasis in a specialized
field. That's why most (not all) institutes of higher learning require
classes in things like history, literature, and other stuff that would
seem unrelated.

If I were Larry Roll, I'd lament that I've seen so many people with
college degrees that still couldn't fill out a job application
properly, that the requirements for a college degree must have been
seriously dumbed down over the past thirty years, but I'm not, so I
won't. Nevertheless, I have worked with people who held engineering
degrees yet could not compose a coherent memo for circulation in their
own department.

An amateur radio license is a document awarded at the *beginning* of
one's participation in the hobby for the purpose of granting operating
privileges and to certify that the recipient has demonstrated entry
level knowledge at the class of license thus received. It won't get
you a job bagging groceries. As for the accomplishments, those come
afterward when you actually start to make use of the privileges the
license conveys by putting Qs in your logbook. It is not, and is not
intended to be, comparable to a college degree...no matter how much
some people would like it to be so.

>allows for exposure of those individuals to local operating practices.

Better yet is an emergency communications organization that recognizes
the varied skills of its members and institutes systems that utilize
those skills where they can do the most good. If a group of, say,
forty operators has ten accomplished CW operators and thirty ops whose
CW skills aren't up to snuff for emergency use, so be it. The thirty
ops who lack CW skills can still train to participate in voice comms,
conduct tactical comms on VHF, etc. If a person has a useful skill and
is willing to volunteer, you find a way for them to contribute. You
don't turn away volunteers, because when the time comes that you need
your team members, some will be themselves be victims of the disaster,
some will be unavailable because they're at work, some will need to
take care of family members, and so forth.

>If
>those operating practices don't include the CW mode, it is up to
>participants in the operation/net to recognize that the best communication

>immediately familiar to all participants. Folks such as Dick and
>Larry--IMHO--fail to display the attributes that help others recognize their
>ability to size up current limitations and *deal* with it.

In golf, this is known as playing the ball where it lies. In cards,
it's called playing the hand you're dealt. In emergency management,
the buzzword is interoperability - and it's one of the things we hams
bring to the table that makes us valuable assets when the chips (or
the local communications systems) are down.

>DIGRESSION MODE
>ON: if the failure of participants to know and use CW is an issue, it is
>certainly acceptable for those who desire CW to be used to make their wishes
>known and to try and effect change through POSITIVE action. In the meantime
>it behooves a good participant to fail to make enemies because things aren't
>as they wish. DIGRESSION MODE OFF.

I don't think that's a digression at all. It's simply having good leadership skills, and keeping a positive attitude...and your point is well taken, in that there are some individuals whose attitude towards their fellow hams is anything but positive - unfortunately.

>2. A good radio amateur operator, who is familiar with EmCom, is also
>familiar with the current trends in the service of emergency communication
>provision. Again, one may not "like" the current trend but, to criticize
>and be disgruntled about it hinders the efficacy of providing excellent
>communication service.

There is nothing wrong with constructive criticism, so long as it is done in a positive manner. For example, what if the current trend in your area is for emergency management personnel to rely on cell phones as a backup to their radio systems? I don't "like" that trend and will certainly criticize it, immediately and as often as necessary to get the point across. I will not, however, refer to said emergency managers as "maroons" - especially not in a public forum!

>DIGRESSION MODE ON: A good example would be the
>very attitudes that we often see exhibited here in this newsgroup by folks
>such as Dick and Larry. Now, they'll tell you that [paraphrasing here]
>their actions in this newsgroup do not indicate anything about how they are
>in real life.

Of course not. If they said to someone at a club meeting some of the things they've said to people in this NG, they'd probably earn themselves a punch in the nose. Now, I dunno about Dick, but Larry likes his nose. He sends CW with his nose on the key while his left hand is tuning and his right hand is writing in the logbook. :-)

>I say to anyone here, that the actions in this newsgroup are
>well known locally to your fellow amateurs. I cannot tell you how many
>fellow hams I have met who know me only by what they have seen here in this
>newsgroup--and first impression is everything. Most are "OK" with what they
>see here by my opinions and some are not. The point is that most of us here
>in this newsgroup are "offensive," in some way or another, to someone who
>simply reads posts.

That's common sense, of course, because whatever side you take on an issue, you're going to be in disagreement with the folks on the other side. However, since common sense isn't really all that common, some will exacerbate the situation, going beyond simply stating their opinions and allow discussions to degenerate into name-calling, personal attacks on the messenger instead of debating the message, and other common fallacies that are as old as discussion boards on landline BBS systems.

> DIGRESSION MODE OFF. So, if someone exhibits offensive
>behavior because of current trends in the service,

...or for any other reason, for that matter...

>they will not be
>*received* by local/regional/national participants as effective radio
>amateur communicators. They may very well be, but if they are not received
>>and accepted as such, their effectiveness is compromised by their degree of
>offensiveness to others. That would make people such as Dick and Larry
>pretty darned ineffective as radio amateur emergency communicators.

Yep...nice package perhaps, but lousy presentation.

>3. Going back to the "current trends" philosophy: if one cannot recognize
>shifts and changes in current trends, their ability to participate in
>effective radio amateur emergency communication is hindered--*IF* they
>refuse (for whatever reason) to "get on board" with current practices.

Hindered? How about nonexistent?

>If
>the use of CW on emergency/disaster communication nets has diminished, it is
>paramount to a qualified radio amateur emergency communicator to learn and
>become familiar with whatever mode of operation is currently the "popular"
>trend. It's that simple.

I was monitoring a MARS net a few years back, that was being conducted
in some rather lousy band conditions. One station tried to check into
this net using CW because the ops couldn't get through to the NCS
using SSB. The NCS told them that CW was not a valid operating mode
for checking into a MARS net. Draw your own conclusions.

>4. I daresay anyone--not just radio amateur emergency communicators--who is
>familiar with emergency/disaster communication, knows that the best mode of
>operation is going to be one that most--preferably all--participants in the
>communication process are familiar with--*regardless* of how well the mode
>utilizes bandwidth or how well the mode can be implemented, etc.

This goes back to what I said earlier about interoperability. This
consideration became a major concern in the aftermath of the terrorist
attacks on September 11, 2001 and remains an important one in the mind
of any savvy emergency communicator or emergency manager. FEMA has a
publication for emergency managers dealing with amateur radio - I have
a copy in my personal library - and interoperability is one of the
things mentioned as a desirable asset that hams are able to provide.
It goes without saying that anything which compromises
interoperability is detrimental to the overall operation.

>To try to
>"force" the issue of CW onto radio amateurs may be admirable in some cases,
>it is fatal to a good emergency/disaster communication effort *UNLESS* all
>communication providers are "on board" with knowing and using CW
>effectively.

Not necessarily. A CW net can be established for the purpose of moving
health and welfare traffic in and out of the affected area on HF,
while tactical communications for establishing shelters and doing
damage assessment are done on VHF FM. Obviously, the folks working VHF

FM don't need to know shinola about CW. They do, however, need to know how to behave in a directed net, among other things.

>In today's emergency/disaster communication "market" the CW
>skill is little recognized and certainly not used in many circumstances.

Nevertheless, as both you and Arnie have already pointed out in this NG, one should not discount any available means of communication. I'm sure that if Arnie has a dozen CW ops around he's going to use them. If, at the same time, he has a dozen no-code Techs or 5 WPM Generals (like me for example) around he's going to use them too, but not as CW ops. I'm not too good with CW, but I am pretty good at tactical comms.

>DIGRESSION MODE ON: once the communication emergency/disaster operation is
>under way, of course, CW nets for passing HW traffic are critical to the
>implementation of effective transmission and delivery of messages to those
>who would otherwise be "clogging" the resources of responders. It is at
>*this* level that folks such as Dick and Larry should be recruiting
>individuals. DIGRESSION MODE OFF.

OBSERVATION MODE ON: Unfortunately, Dick and Larry aren't recruiting anyone; quite the opposite, in fact. When I first became an ARES member, I was a Technician sans code. If I'd arrived at that ARES meeting and found Dick and Larry in charge, I'd have been back out the door so fast that the suction would have pulled half a dozen other guys right out the door along with me. License class bigotry and operating mode bigotry do no good for any facet of amateur radio, least of all our emergency and public service communications groups. OBSERVATION MODE OFF.

>5. Current trends in the provision of emergency/disaster communication are
>utilizing many modes. The political arguments are beginning to erode and
>the stigma associated with utilizing all available radio services is
>beginning to fade.

Having two skyscrapers collapsing around you while the police can't talk to the fire department, which can't talk to the EMS personnel, which can't talk to the Port Authority police, which can't talk to the Feds, which can't even talk to each other, tends to do that for ya...

>The recognition of this is limited to those above the
>level of folks such as Dick and Larry, who are "stuck" in the world of CW so
>obsessively that they cannot and will not accept what changes are taking
>place and will continue to take place.

It's too bad that it took an incident resulting in the deaths of a few thousand people for this recognition to happen, but sometimes I do wonder if some people realize what they're saying. "CW is like learning another language" for example...okay, fine, but what happens if I get on the radio and tell the fire department that a pumper is needed and such-and-such location because the ice storm just caused a tree to collapse onto the roof of a school building, bringing down power lines along with it, and now the school's on fire and kids are

trapped, and because I happen to like German and think everybody
should learn it, I make this report in German. Great if the fire
dispatcher speaks German. Not a good idea if she doesn't...oh, excuse
me, I mean, if she's a no-good-for-nothing who's too lazy to learn
German and is thus less qualified as a communicator than I am.

> As has often been implied by
>comments in this newsgroup: while "they" are stuck in their world, the rest
>of the world is moving on and providing a great service--as one of the
>tenets of amateur radio is realized.

I dunno if I'd go so far as to suggest that accomplished CW ops are
going to be left behind as the rest of the world moves on without
them, because there's nothing stopping someone who's already developed
good CW skills from learning additional skills useful in other
operating modes. The question is whether or not an individual is
prepared to put those skills to use when they're needed.

Our EOC has HF, VHF, and UHF gear, packet, a couple of repeaters,
emergency power from a diesel generator, and both a straight key and a
bug for CW ops to use. There's more than one radio for each. There's a
scanner. We also have SSTV capability, so that a ham in the field with
a digital camera and a laptop computer in his car can take pictures of
a disaster scene and transmit them back to the EOC over the air so
that officials there can see for themselves what's going on, rather
than having to haul everybody down to the scene for a first-hand look.
Of course, that means the ham in the field needs the digital camera
and needs to be able to power the laptop in the car (or once the
battery in the laptop runs down, goodbye to that capability). That
means adding an inverter to your jump kit if your laptop doesn't run
on 13.8 VDC. Some guys make me wonder if there is anything in their
jump kits other than a key, a QRP CW rig and a battery. I hope there
is, but the way some folks tell it there's only one operating mode and
CW is it. There's more to ham radio than that - if there wasn't, I for
one wouldn't be here - and there's a lot more to emergency and public
service communications than that. CW is a useful skill, but it isn't
the only useful skill.

>There's loads of other not-so-ham-radio-related items that could be brought
>up about how folks such as Dick and Larry have missed out; those that deal
>with the leadership, recruitment, education, organizational, motivation, and
>process of emergency communication.

Yes we do, and I just mentioned a few of them. Thanks for recognizing
this fact, though.

Perhaps you're unaware that he is now in the terminal phase of a cancer (so I've heard), so by the time the FCC and USAtty could prosecute him, he'd be dead anyway.... There exists no disincentive to keep him off the air.

I'm not saying that CW is totally obsolete ... and I won't presume to speak
for JJ ... I just know that there are much better digital modes available
and
that CW's main purpose these days is as a recreational activity for those
who like it.

I like kyaking, but I don't believe that everyone should be a proficent

You missed a small point; there were, believe it or not, elements other than 1-C that some of us had to take. Please don't worry; now there are Q&A manuals to help (that didn't exist back when). Um, what is the proper way to give your location on a repeater? Um, the 20 is ... er, ahhh ... Very difficult questions. Don't worry; here in New York State, they threw out the regents math exam. It was determined to be 'flawed' (read, too difficult). One valid flaw was that the math exam asked questions concerning geometry. Well, we can water those tests down next year too. Maybe we can publish Q&A manuals for the regents math exam - and also make sure there aren't any questions harder than addition, subtraction, multiplication, and division. Oh, best keep the numbers less than four digits. Forget imaginary numbers.

In article <bel98f$6b9k6$1@ID-166180.news.uni-berlin.de>, "Arnie Macy" <kt4st@csam.net> writes:

(quoting NCI reply comments)

>"review the privileges afforded to each license class and make certain that
>all test requirements for each license class RATIONALLY and DIRECTLY
> RELATE to the privileges the licensee receives by virtue of passing the
test."
>
>"In the interest of continuity with the present licensing structure, study
>guides, and testing materials, NCI again recommends that the three license
>classes be called "Technician," "General," and "Extra." This will permit a
>practical combination of existing study guides and testing materials to be
>used until such time as such materials are REVISED and will result in
>REASONABLE tests for the three new classes of license contemplated in these
>comments."

Here's how I read the above:

NCI's stated goal is no more mandatory code testing. That's a pretty simple goal - just convince the folks in charge to eliminate the tests. (Don't get offended, folks - I wrote "simple", not "easy".)

The license structure and the written tests are a much more complex issue. How many license classes? What privileges? What actually gets on the test? Etc. A real hornet's nest, and all of it comes down to opinions.

Now a lot of folks I know have expressed opinions like "dump the code test AND beef up the writtens" or "trade the code test for better writtens" etc. But linking code test abolition to written test improvement would slow down the process.

So NCI effectively says: 'dump the code ASAP. Then, in the future, after the code test is gone, the license privileges and the writtens should be reviewed and revised.'

See how neat and clean that is?

>First, I was never a PCTA ... and you know that. But that aside, above are
>the quotes from the reply comments of NCI to the NPRM. Of course, they
>don't come out and directly say it, but it is clear where they are going
>with this.

I see it as a way to get their goal done without being hampered by other issues such as written test reform. Which NCI won't have to do because the organization won't exist after the code test is gone.

>Now, add to that, the comment from an NCI Director -- "Just
>having a test...any test, serves as a barrier to millions of people. That
>an actual learning effort is required (even if it is straight memorization)
>will continue to act as a barrier for 99% or more of the population." - Bill
>Sohl, NCI Director, 02/01/97 on this NG.
>
Sure. The idea behind that one is that you don't need the code test as an entry
"barrier" or "filter", because ANY test will do that. IOW, don't worry about
ham radio being overrun by "bad apples" because the mere presence of any test
will stop 99% of people...

At least, that's how I read it.

writes:

>Isn't Code more of a skill than a knowledge?

Dwight,

You may find the following definitions useful, I do, anyhow.

"Knowledge" in this context really means anything that can be learned and known
consciously by a person.

There are at least three different kinds of knowledge - facts, concepts and
skills.

Facts are concrete pieces of information, and are learned by pure memorization.
"1 plus 1 equals 2 in base 10" is an arithmetic fact. A person can know all
sorts of facts with no understanding of what they mean.

Concepts are understandings of how things work and what they mean. Such as the
concept of addition, which requires understanding. Of course without facts,
very little can be done with pure concepts.

Skills are the abilities to actually do useful things. Such as being able to
add numbers and get the right answer. Usually, but not always, skills require
facts and concepts. Skills are only learned through practice. You can know all
the facts about bicycles, and thoroughly understand the concepts behind bicycle
design, but you won't be able to ride one until you practice.

Most of what is on the written test is facts. The Morse test is almost pure
skill. Concepts get the short end.

So what's the answer, Phil?

I see one possiblity that may kill the whole idea. Will the service be competitive with DSL or cable modems? Around here, those two are at each other's throats price-wise, yet a lot of us still use dialup because it's cheaper. If BPL costs as much or more than DSL or cable, it's not gonna fly for long.

Remember Iridium?

>In less than 100 years we went from spark gap to satellite technology
>from the Titanic to flight 800 - and neither of those two fared very
>well for it.

That's because in the case of Titanic the problem wasn't the technology, but how it was used - or misused. Example: The Marconi ops delivered at least six ice warnings to the captain, all describing serious hazards directly in the ship's path. Some of the reports were from ships stopped because of the ice.

But the captain simply tells the lookouts to keep a sharp eye out, (even though nobody has been able to find the binoculars the lookouts are supposed to have) and doesn't even slow down.

>In the millennium before, it was semaphore and smoke
>signals.

Actually, communications from the time of Julius Caesar to Andrew Jackson were pretty much unchanged except for a few special installations. Basic method: Write a letter or send a messenger. Communication could go no faster than available transportation.

DOH!

>Two decades before the best you had was
>CB, a decade before it was disposable cellular phones.

CB was NEVER "the best you had". Hams were operating mobile in the '30s.

You'd think that one who likes "kyaking" could spell "kayak", Squiggy.
Looks like you've chosen a poor analogy. Your view would more properly
expressed by stating that with modern power boat technology, no
individual should be forced to jump through the swimming hoop.

Do you seriously not believe that?

An engineer can always get a technician's license. Why aren't we seeing this happening? At least in my area, the Engineers with tech licenses are there as they transition through the ranks.

> "Elmering" new hams who are not technical on the technical aspects

> designing new modes

> writing useful ham software

A technician Engineer can do all of these things.

> Just because someone isn't interested in jumping through the Morse
> hoop, doesn't mean that they are so selfish that they can't/won't
> contribute.

If your premise is true, then why aren't there loads of Technician level Engineers? In fact, I would give a whole lot more credence to a group of technically savvy Engineers who have their Technician's license, and they tell the ARRL and FCC. "Hey here we are folks! We're not going one level past Technician because we simply don't believe in the Morse code requirement."

It would have been nice to have hordes of technically competent
Technician level Engineers at the vangaurd of the Anti-Morse movement.

Instead we apparently have those who say "we won't participate at all
unless everything is to our liking, if your premise is to be believed.

"Carl R. Stevenson" wrote ...

Fred Maia, W5YI, was quoted as saying something along that line WRT the Tech test ... but Fred is just *one* of the Directors of NCI, and I can state that his view in that regard is NOT NCI policy and is not shared by me or the rest of the NCI board. (IIRC, Fred also said he'd like to make the Extra test more rigorous ...)

[Of course, NCI was never in favor of removing the digital/CW sub bands either, right?]

No, we were not ... and we never said we were. If you "google" or whatever, you will, I am sure, find numerous instances of me saying that I would *not* favor an expansion of the phone bands at the expense of the digital/CW sub-bands, because I wouldn't want to see the future development of digital modes impeded. (the rest snipped)

That could be what I was thinking of. Quoted by ya'll referring to Fred. But I distinctly remember there being a discussion about lowering the technical test requirements and that NCI was in favor of that.

Now, as to Digital/CW sub-bands. Below is the official comment by NCI -- it sure sounds like they would roll over and play dead if it should ever come to supporting the keeping of sub-bands for Digital/CW. Do you read it differently, Carl?

"d. Third, Mr. Kane recommends that there be no regulatory distinction made between modes of transmission. This point would likely gain mixed, but significant support amongst NCI's membership, and it should be pointed out that this is the norm in the rest of the world and no real harm seems to have come from the lack of restrictive sub-band-by-mode limitations such as those currently embodied in the Commission's Rules."

No one sez you have to use it. I'm not forced to do those silly
satellite ops either. But I gotta test for them.

Well, I just saw a post. Interesting problem from a brand-new 1X2 call. Seems he had a fairly high SWR on his beam so to keep water out of the traps, he sealed the holes in the traps. The beam is mounted on conduit 20 feet off the ground and now his SWR is *extremely* high on 20 and 15 meters. So, someone kindly explain how elimination of any waiting period for the extra class license and virtual elimination of the code (no, I'm not a pro-coder; it just forced folks to wait and learn a bit before they were ready for the 20 words per minute test) has increased the technical competence of amateur radio.

SSB - established mathematically in 1914, First patent in 1923, first transatlantic transmission in 1923, transatlanti public use in 1927, first amateur use around 1933. Didn't catch on for around 15 years.

In what way have we ever not acknowledged that CW was
the first mode, or that it is simple, or that it can
be used by hams today (i.e. viable). Bottom line
is so what...that does NOT justify any need for a code
test. That's what is so downright silly. YOU want every
new ham to have to learn CW on the hope that some
percentage will like CW enough to become a user. You
are (IMHO) clearly not up to the task of recruiting new hams
by proactively advocating CW use.

Horseback riding uses or can use the same transport routes that
modern transcontinental transportation does...but it can
also go "ooff-road" through routes that modern transportation
can't.

>before 1975.
>
The Conditional class of license was abolished by the FCC in 1978. Upon
renewal, existing Conditionals got General class licenses.

From 1951 to 1954, all nondisabled prospective hams within a specified distance
of an FCC exam point had to take their license exams at an FCC office.

In 1954, the rules were changed so that Novice and Technician were normally
given by mail, under the proctorship of a single volunteer examiner. These
rules were in effect until the VEC system was created in 1983-84.

Some hams got their Technicians at FCC offices. This happened when a Novice ham
would attempt the 13 wpm code and fail. FCC examiners would sometimes allow the
Novice to take the General/Conditional/Technician written test, and end up with
a Technician. This was probably most common in the days when the Novice was not
renewable or retakeable.

Brian,

You only get assigned a sequential call from the FCC initially. You may keep your current call sign or allow them to assign you an extra class call sign sequentially. If you desire a 1X2, then you have to pay the money for a vanity call sign. You only pay every time you renew (once every 10 years). You can likely switch any time you wish; bear in mind that with the reduction of requirements there are a *ton* of extra class licenses nowadays. Years ago, an amateur extra could get a vanity call sign (for free!). I once did get N2JH, but let my ticket expire. Had I held on to that, I wouldn't have to pay every 10 years. Now, with a ton of existing extras and the code requirements about to be dropped, it is going to be difficult for anyone to get any 1X2 or 2X1 call simply due to the number of folks who also want to get one. You may well wait for years before you are lucky enough to apply and actually have the call you applied for available by the time your request gets to the FCC (others will likely also be applying).

> is the key factor in play here. But you already knew that.

Of course, and the cost of having thousands of hams learn
morse isn't born out by any need whatsoever...as the FCC
has already determined in 98-143. Rather, the PCTA folks
failed to make sufficient justification to the FCC that
hams MUST know morse.

> Moreover,
> these "other services" you're talking about use high-powered satellite-
> based technology which is designed for their specific purposes. But
> you already knew that, as well. When you make apples-to-oranges

as
> deluded as any other NCTA.

Well it seems to me the only folks that are living
in fantasy land are the PCTAs. Not ONE of the
PCTA arguments was "accepted" by the FCC as
sufficient reason to retain code testing. Rather, the
ONLY reason the FCC even kept 5 wpm was the
former ITU treaty...now that's gone too.

Arnie, in global communications, SSB has pretty much seen its day too.
Comms are now digital and via satellite for many ships. Telecommunications,
both terrestial, microwave and satellite are almost exclusively digital.
Even so, no one is asking to shut down SSB in ham radio any more
than CW is being asked to shut down. Use it all you want...the test isn't
needed to use the mode.

Those are some of the reasons I advocate a return to the waiting period
before advanced ticket upgrades.

And I say that from personal experience. An Extra *should* be
essentially an expert in the ARS.

Oops, is that a "filter" or "hazing" like Morse code is?

BUT, you seem to say...accept it and never try to change
it. The ITU just dropped mandatory testing...for one of the
reasons being they didn't see any need to keep it. Not
one country spoke in favor of keeping mandatory code
as an ITU requirement.

> > > It has nothing to do with "Antiquated technology"

The tests are an entry gate...not the final exam.
That has always been the case with ARS.

John:

The only no-coders I bother to "ridicule" are those who offer the typically inane arguments that code testing is somehow detrimental to the future of the ARS -- usually by discouraging the involvement of computer-literate, technically-involved young people. The truth about these people is that they just want to get on HF phone and yak away -- and for the most part, haven't a clue as to what's happening inside their off-the-shelf ham radio appliance.

>Well some coders refuse to learn the technical material.

Vipul:

If that is so, then they can't be hams, because they never would have passed the theory part of the written tests, would they?

>Although
>time-consuming, Its easy to learn one skill (CW) and claim superiority for
>that.

Naturally, this overlooks the fact that virtually every technical advance created within the ARS has traditionally been achieved by hams who also met the existing licensing requirements -- including Morse code proficiency at up to 20 WPM.

>Seems like the requirement was dumbed down to the non-technical Ham's level.

Yes, indeed, the technical knowledge requirements are lower now than they were under the previous, more challenging and comprehensive standards of the Pre-Restructuring Era.

>There are other reasons not to learn code other than "dumbed-down" as you
>say.
>One is that I don't like code.

The fact that you, personally, don't like "code" doesn't serve as a very compelling argument to eliminate the requirement. However, in this New Age of a generally dumbed-down society, that's all it took!

>Another reason is image. It shows that you put
>time into a worthless pursuit (Morse code). Image is NOT the consideration
>for me. I would learn it if I wanted to.

Unfortunately for you, your circumscription of Morse code proficiency as a "worthless pursuit" is no more than a highly subjective and flagrantly self-serving evaluation made by a person with no qualification to render such a judgment. I challenge you to provide some documentary evidence that knowledge of the Morse code is somehow detrimental to the "image" of amateur radio operators.

>I don't have to learn <Morse> code just so I can prove I have the ability to
>learn <Morse> code. I have learned other skills that are just as difficult.

Name one. Just one. Please relate how this skill to which you refer
compares with a proven, effective communications skill such as Morse
code proficiency as applied within the ARS. Kindly leave out the usual
apples-to-oranges comparisons to military or commercial radio services.

>Another reason is the "benefit" is not worth the effort. I would put effort
>into those because I can use those skills in <real> life. I cannot use
><Morse> code.

Again, this is a judgment that you are not qualified to make. The proof
is your own admission that you cannot use the Morse code. If you could,
you may have an entirely different perspective.

>>I highly suggest that to add to your sense of self-satisfaction, that once

>>Restructuring, 20-WPM code-tested Extra you know that you are their
>>"equal" as a ham radio operator.
>
>Funny, thats what pro-coders say. They say that a General class that learned
><Morse> code is superior because they have a higher license class. I would
>say
>that the General or Extra that just learned code may not be superior to the
>Technician that wants to have good technical skills, but refuses to learn
>code.

I think we really need to examine this concept of "technical skill" within
the Amateur Radio Service, and find out just precisely what is meant when
that term is bandied about. It has always been one of the favorite arguments
of the NCTA, but actual experience has shown that new hams who come
into the ARS under relaxed licensing standards tend to be less technically
involved than ever -- to the point where they barely show enough curiosity
to even thoroughly read and understand the operator's manuals for their
off-the-shelf equipment. The concept of "Elmering" has transmuted from
a process of taking a newcomer through the basics of electrical theory up
to the building and operation of simple station equipment, eventually
advancing to more complex projects, and even inspiring formal education
in electronics, to simply showing the New Age No-Code Tech which button
to push to make his HT work. If any honest and objective evaluation of
the technical skill levels of ham radio operators were made from an
historical perspective, it would show that code proficiency testing certainly
could be linked to the advancement of technical knowledge, whereas the
elimination thereof has led to a decline in overall technical involvement.

Whatever new people enter the ARS in the no-code testing future certainly
face a daunting task of proving the claims of those who have, throughout
the code testing debate, attempted to link Morse code knowledge with
technical ignorance. We shall see what the future holds.

Lloyd:

Actually, it's the "I couldn't be bothered to become as good as you" attitude
which is ruining our hobby.

>I'm afraid thoese days are going the way of the dinosour........

Well, then, once you get your No-Code Extra, we will all be looking forward
to all those amazing technical advances you will personnaly create for the
benefit of the ARS! You see, I am one prehistoric reptile who has never
claimed to have anything more than AMATEUR-level technical skills -- as
has been the traditional requirement for this service. However, since the
NCTA has always claimed that code testing was standing in the way of
technical progress in amateur radio, we shall soon see whether those
claims are, in fact, valid -- or just empty blasts of hot air used to justify
the elimination of a licensing requirement which produced a cadre of
hams with useful, effective communications skills.

Carl:

My belief that "Morse makes the ham" is based on the fact that radio amateurs,
as members of a voluntary, hobbyist-based radio communications service, can
justify our existence, and hold on vast amounts of commercially viable
spectrum,
only if we have communications skills that give us an "edge" under difficult
communications conditions. Morse/CW does this in ways which you most
certainly are aware of, but must reject out of deference to your anti-code test
agenda. With all due respect, the "quasi-religious-faith belief" seems to
exist
on the side of those who insist that Morse code proficiency is somehow
irrelevant
to the ARS now and in the future.

Kim:

So be it. In any case, the coming generation of New Age, Dumbed-Down,
No-Coder hams aren't likely to seeking any kudos from me on their CW
skills. I would hope that any who learned the code and became proficient
with it's use on-the-air, would do so for their own personal gratification and
to add that skill to their overall capability as a radio amateur. Of course,
that is a concept that you will naturally reject, out of the necessity of your
agenda to justify your own lack of useful communications skills. Don't
worry -- our expectations of you are small.

>Kim W5TIT

Kim, Dear, what kind of "proof" of this would you accept? You are not a
CW operator, so you are not even qualified to judge any "proof" offered.
Those of us who are proficient CW operators with adequate on-the-air
experience have certainly had this fact proven to them to their satisfaction,
but a no-coder will always claim that it isn't proven simply because they
have no way of discerning and analyzing the evidence, and they have an
agenda which would cause them to deny the outcome. So please don't
go demanding "proof" unless you're willing to place yourself in a position
to be an objective, competent arbiter of any evidence offered.

Jim:

How politically-incorrect of you to point this out! However, the NCTA's
have, for years, made the claim that code testing was leading the ARS
down the path of technical ignorance. Now that all that is going to go
away soon, it will be very interesting, indeed, to learn of all the wonderful
new technical advances that will be wrought by the influx of computer-
literate, technically-competent young people eager to join our ranks!

Now, if you'll excuse me, I need to call a realtor and buy a nice piece
of real estate in the Florida Everglades to build my retirement home.

>There are 3 available 1x2's now per N4MC's Vanity HQ's database.

Nope. You get a 2x2, such as AB4CD. This is the current configuration
of FCC-assigned Extra class call signs in the "free" (non-Vanity) call
sign database. You would need to include a request for a Vanity Call
Sign, pay the current fee, and indicate up to 25 choices for a Vanity
call sign in order to obtain a 1x2, 2x1, or any other call sign configuration.
If there are only 3 1x2's available in your call area, you'd better act
quickly. Of course, you'd still have the option of "stealing" a 1x2 from
out of your call area, but I consider that dirty pool.

Source record: 70906

Now that it seems as though code testing will finally be abolished in the ARS, let's amuse ourselves with a bit of speculation as to what this will mean in terms of future growth in the numbers of licensed amateur radio operators in the United States. What do you think will happen? How much growth do you think will occur, and how fast?

I predict that there will be no significant growth in new licensees. Now, all we need to do is define the term "significant growth." We currently have around 600-some kilohams in the US. I'd call a five percent growth factor, or 30,000 newly-licensed radio amateurs, to be significant. Let's give this a year to happen. I say it won't. How say you? Keep in mind that at this stage of the discussion, I'm just trying to establish reasonable parameters -- so let's all weigh in and try to arrive at a consensus as to what any future growth could be. Then we can commit to our numbers and see who gets it right -- or at least close.

>
>Cheers,
>Bill K2UNK

Bill:

When 98-143 was being considered, the FCC had an obvious agenda
in mind -- to rid themselves of as many of the administrative burdens
associated with the Amateur Radio Service as possible. They must
have known that they would get their way through the comments
process, since code testing is generally unpopular with prospective
amateurs and therefore politically incorrect.

I do not discount the possibility that when they finally get around to
reacting to WRC-03, we may end up with a two-class licensing system
with perhaps 50-question tests aimed primarily at safety issues. They
may even allow the tests to be taken "open book." Distilling the ARS
licensing system down to a single class wouldn't surprise me, either.
Amateur Radio exists entirely on the debit side of the FCC's agenda,
and they want to drop as much of this puppy as they can. That should
be obvious to even the most casual observer.

Since the beginning of the use of phone in ham radio, I would be interested to know of any disaster where ham radio was used for communications and CW was the only means of communications that could get through. I don't mean CW was used just because someone wanted to or because they only had CW capabilities, but because it was the ONLY mode that could get through.

We used it when Floyd hit in 1999. We were having a hard time getting through on SSB, so switched over to CW and continued ops until the band conditions improved. CW didn't "save the day", but it sure came in handy when needed. It is still an integral part of our EMA plan. Remember, in disaster planning, we try to use *all* of the tools available to us. Maybe one day, the light will come on for you and you'll understand that concept.

Arnie, in global communications, SSB has pretty much seen its day too. Comms are now digital and via satellite for many ships. Telecommunications, both terrestial, microwave and satellite are almost exclusively digital. Even so, no one is asking to shut down SSB in ham radio any more than CW is being asked to shut down. Use it all you want...the test isn't needed to use the mode.

That's not the take that JJ has. He continually refers to it as antiquated and obsolete -- not worth using in EMCom. I completely disagree with his assessment, and can prove it. The test was not at issue in this thread.

When he dose something to deserve respect, he will get my respect. Belittling other hams just because they do not feel the same fanatical zeal toward CW as you and Dick do, does not deserve any respect. When you and Dick stop seeing other hams as inferior to you, then you might get some respect. Because of your "I am superior because I operate CW, that makes me a real ham" attitude toward other hams means you have not earned any consideration for respect through your participation in this forum.

It is still MISTER JJ to you and Dick.

"Better" is in the eye of the definer. There are characteristics in which Morse is much "better" than any digital mode, and characteristics in which some digital modes are much "better" than Morse.

Is an FT-1000 a "better" rig than a K2? All depends on what characteristics you consider important. FT-1000 has more features and somewhat better filters, for example. But K2 is much smaller, lighter, less power-hungry and less expensive. Etc.

>and
>that CW's main purpose these days is as a recreational activity for those

Let's say a 5% growth above the current growth rate (the latter figure has shown up previously on this news group but do not remember the figure). The rate of growth of hams already exceeds the rate of growth of the general population (again the data has shown up before on this newsgroup).

However, like you, I believe that there will be no noticeable increase in the number of new hams and only a temporary surge in the number of upgrades.

What's sad is that when conditions deteriorate during a QSO and you say to the other party "let's switch to CW" there will be too many who can't and you'll just have to terminate the QSO.

Elimination of the code requirement may actually cause a loss in the ham ranks, if not in numbers at least in activity. The elimination will probably coincide with the early part of the bottom of the current sunspot cycle. People will upgrade and quite a few will be so disappointed at the poor activity that they will become quite inactive on HF and this disappointment could spill over and affect their activity on VHF/UHF.

> is much "better" than any digital mode, and characteristics in which some
> digital modes are much "better" than Morse.

Exactly. Morse can be deciphered by ear if you don't have a computer. What if you are unsure of the amount of time that you will be without power and don't want to put the additional load of a computer on your power source?

"Better" depends on the sum total of the conditions under which you are operating. One can envision scenarios that favor one specific mode over others. That is why a ham should have a basic competence in ALL modes including morse.

Broaden the category to Socio-Humanistic electives or whatever equivalent term that your college uses and you will find that you do have to take a certain amount of them. And everyone regardless of major has to take English even though they should already be proficient at that before they get there. You have to take quite a few "unnecessary" courses in college to get a degree in any field.

>Those are some of the reasons I advocate a return to the waiting period
>before advanced ticket upgrades.

I disagree. A waiting period would be unfair. If the person has prepared themseleves well, they may well have the ability for the upgrade. Why slow down someone that has the ability for the upgrade?

> And I say that from personal experience. An Extra *should* be
>essentially an expert in the ARS.

Thats what the license should imply. Each licence upgrade should have higher skill than the previous license

Most of the clubs don't want to focus on technical skills. Most clubs focus on contesting, antennas, and CW. Clubs could do homebrewing, tuning, radio direction finding, or other technical areas.

>Oops, is that a "filter" or "hazing" like Morse code is?
>
> - Mike KB3EIA -

<Morse> code is a bullying tactic to force this skill at the expense of other skills. <Morse> code is not a "filter". It blocks entry to the General class license. It is an irrelevant skill, used as an obstacle.

<disregarding the intended disparagement via the "nickname">

OK, so I mistyped ...

No, your analogy distorts what I was trying to say. Of course,
anyone who goes boating should know how to swim ... but
hams that are allowed to operate high power should know at
least the basics of RF and high voltage safety as well. These
are simple issues of personal safety and the safety of others.

However, not knowing Morse does not pose a risk to anyone,
and therefore my analogy of a particular "mode" of water sport
being required arbitrarily for ALL who wish to enter the water
is a more accurate analogy to the situation being discussed.

Dick,

Are really so dense that you actually think that's what I said??? (If so,
that's really sad.)

What I was saying was not that the RF signals travel faster with more
modern digital modes than with Morse, but rather that those modes
can transmit the MESSAGE CONTENT faster (and in many cases
more reliably than a human operator doing Morse).

How many clubs have you surveyed?? In this area (around Detroit), only one club of the many available focuses on contesting. In the others, contesting does occur but it is not emphasized and only a few members participate and typically it is casual participation. The club to which I belong is probably typical of this area. We have a monthly meeting with a presentation at each meeting. In the last two years, there have been no presentations on contesting or on CW. There have only been two presentations on antennas. Topics have included message handling, antique radio collecting, tower safety, and a wide range of other topics.

Not irrelevant and it is not an obstacle. Those who call it a filter are really doing a disservice to Amateur Radio. It is a usefule skill that takes some time and training. Due to its nature, one cannot judge its relevancy until they have learned it and used it. Lately, I've been working more Morse than before due to band conditions. I don't care for the computer modes and there just aren't that many people out there on the computer modes.

>
> Arnie -
> KT4ST

Arnie,

You asked me if I thought that Morse was "obsolete." For other than
recreational use, I think that's largely so.

Does that mean I want to ban/limit/restrict its use? No, of course not.

And yes, the conversation/debate here has ALWAYS been about
the TEST, and that's what all the fuss has been about. Some CW
enthusiasts believe that the sky will fall if Morse testing is dropped.
(More like they will have to share "their" bands with more folks
and they will have to do their own "recruiting" of new Morse fans
to ensure that they continue to have someone to communicate with
in that mode as the actuarial tables take their toll on existing, code-
using hams ... and I am NOT trying to "rush along" any OTs, just
talking "facts of life" when I mention actuarial tables.)

Another factor is that SOME folks (Dick, Larry, and others, actually
BELIEVE that their Morse proficiency makes them "REAL HAMS"
and that those who are not interested in, or proficient in, Morse are
in some way "lesser beings."

Morse is "obsolete" in the following way:

It has been supplanted, in virtually every service except ham radio (where it has been maintained as a "tradition," "hazing ritual," etc.), by more modern, efficient, reliable, and convenient means of communications. (horse vs. car or airplane, for example)

So, in that sense, it is obsolete (in practical terms on an overall basis), though it does live on (and I expect will for a very long time) as an avocation on a recreational basis.

Arnie,

I was voicing my opinion of the way that Dick, Larry, and a few others ACT.
You will note that I said I didn't actually think they ARE stupid ... but
that they
ACT that way (IMHO).

Of course, they are free to feel the same way about me, and I'm sure they do
because I don't buy their quasi-religious fervor vis a vis "Morse makes the
REAL HAM." etc.

No, you didn't. Once would a "mistype". Two would be a misspelling.

> No, your analogy distorts what I was trying to say.

You did a pretty good job of distorting what you were trying to say
without assistance from me.

> Of course,
> anyone who goes boating should know how to swim ... but

Neat concept, but flawed. You've often told us that hams who want to
use morse can learn it after they've gotten a license. Can't those who
want to use high voltage supplies learn about them after they've
obtained a license? If someone only wants to run QRP rigs, why should
he be forced to learn about high voltage supplies?

> However, not knowing Morse does not pose a risk to anyone,
> and therefore my analogy of a particular "mode" of water sport
> being required arbitrarily for ALL who wish to enter the water
> is a more accurate analogy to the situation being discussed.

If I'm involved in an emergency and the only mode I have available to me
is morse, I'd be up the creek if the only guy I encountered on the band
in use was Vipul Shah or a neophyte Leonard Anderson. I could be at
risk because of their lack of knowledge. It seems that one would need

the basics before heading out, full throttle in a power boat.

> You made my point.

Bill you have been quite consistant about missing the entire point. When there is no code test
most hams won't learn Morse code. I know that taxes you not a bit, so that means that you don't
care whether or not hams will be losing it as a viable mode. Which shows how shortsighted you
are, right along with the rest of NCI. And yes, FCC too. Of course they have far bigger fish to fry
than to worry about a trivial detail involving the ARS. The least time they must spend on ARS issues the better for them, whatever the end result.

I don't mean contributions in the sense of Ed's work on the BPL
comments package. One of the rationales proffered over and over again
by the NCI types for deleting the code tests has been that
eliminatinating the code tests will bring flocks of engineers into the
hobby who would then come up with technical contributions, "advance
the state of the art" etc. Maybe I missed it but I don't know of any
such "event" since 1991 when engineers could become hams without a
code test.

Larry,

You apparently didn't see the movie, didn't get it, or have forgotten.

1) Forest Gump was (mentally) "slow"
(in an effort to be politically correct :-)

2) His successes were essentially a(n improbable) series of
"dumb luck" episodes.

3) He did, however, have a good and kind heart and always
treated people with respect.

Too bad you ACT LIKE you only meet the first two criteria ...

I withdraw my comparison.

You don't get any new call unless you specifically request one. The default is you keep your existing call. If you do request a new call when you upgrade you will get a 2x2 Extra class callsign assigned sequentially.

> or
> do I only get if applied as a vanity?
> There are 3 available 1x2's now per N4MC's Vanity HQ's database.

If you apply for a vanity call, it can be any call sign that is:
1) currently unassigned and available per FCC guidelines, and,
2) available for your license class and geographic location.

If you are upgrading to Extra, do NOT apply for a vanity call until after your Extra class license has been issued by the FCC!

> If I only can get one of them (or an upcoming old 1x2 expiring call) by
> the vanity program, do I have to pay for it 'every year' forever?

The vanity fee is for the entire 10 year license period.

You have already found the best source for vanity information - N4MC's VanityHQ. Check out the help reference, helpful advice and FCC callsign guidelines -- all links from the main page. A wealth of great information.

Good luck with your new call and 73,

> I predict that there will be no significant growth in new licensees.

I dunno, Larry, Carl Stevenson and his Magpies of Morbidity have so traumatized themselves
and we-don't-know-how-many others among the uninformed into believing that Morse is nothing
short of torture, to the point that there may indeed be quite an influx of new codeless hams.

I believe, however, that Hans is right - most of the people who want to be on HF are already
there, given the ridiculously easy testing of the past couple decades of the VE system. But that
kind of conclusion is of the "eye of the beholder" sort where the attitude of the testee is paramount.
If he thinks it's "hard", then hard is what it is.

You see, what those folks can't know is that Morse is a language, for those who learn it to skill.
When you sit and listen to it coming in as words, rather than attempting to laborously convert "dots and dashes", in their vernacular, into letters, then letters into words, it is an entirely different phenomena. You and I know that. They don't

And convinced some that ham radio is not for them if they have to
associate with people like Larry with his superior attitude. It is
people like Larry and Dick with their attitudes toward others who
do not share their zeal for CW that do more harm for ham radio
than not having those CW skills ever could.

Not dear ol' closed-minded JJ. Wouldn't take much to make a Carl out of him.

I am curious as to why CW would not be a valid operating mode on a
MARS net.

Ah so, that's the source of Carl's problem. Somebody Wouff Hong'ed him
for flunking the 13wpm code test!

NCI was NOT in favor of that ... Fred, and Fred alone, in his capacity
on the QPC, stated something to the effect that HE thought that since
most Techs use store-bought rigs, the Tech test could be simplified.
I (and as I recall, all of the other NCI directors who spoke on the subject)
disagreed with that view.

However, Fred ALSO indicated that he thought that the Extra written
test could/should be made more rigorous.

Simply stating the facts as perceived in terms of the membership's views.
This
is NOT NCI's issue though ... though, as I have said over and over, I
personally
would hate to see the digital/CW sub-bands overrun by SSB.

This has always been the case, John -- I was one of the "technical
nerds" when I was a newcomer ham as well -- much to the dismay of
the OT's in my first club. And I don't claim to be a technical genius
or anything like it -- I have strictly "amateur" technical skills.
****

So according to Larry that technical knowledge is directly related
to code skills, he should be a technical genius by now. Evidently,
by his own admission, that he has marginal technical skills, his
great skill at Morse code hasn't done much for him.

I didn't post any comments. First because I was all ate up by other matters and missed the deadline. But even if I had submitted a comment it would simply parrot a zillion other similar comments. What good would that do? The FCC is not conducting a referendum on BPL. I seriously doubt that a large number of comments by us weenie private citizens has anywhere as much effect on the FCC as do the the few professionally crafted comments submitted by the heavy hitters in the biz such as the ARRL and the IEEE. Imlay and Hare have a whole bunch more clout with the FCC than any of us have combined so I bought a $100 money order yesterday and it'll be on it's way to Newington tomorrow.

>

There's a basic fundamental that folks such as Dick and Larry seem to let go
right over their heads. If they're at all worth their salt in emergency
communication (and I suspect that neither have had anything to do with
organized amateur radio EmCom in a lo-o-o-ong time), they'd realize some
parameters that are critical to emergency communication. Here are just some
of the parameters that folks such as Dick and Larry are missing and need to
get "up to snuff" on:

1. A good radio amateur emergency communication operator recognizes the limitations of skillet of volunteers in a local/regional/national net and *deals* with it. In a communication emergency/disaster, the first need is qualified individuals for service. The fact that one is an amateur radio operator is not enough. Being active in local/regional/national training and net participation is crucial to the proper training of individuals and allows for exposure of those individuals to local operating practices. If those operating practices don't include the CW mode, it is up to participants in the operation/net to recognize that the best communication mode is one in which everyone, a) is willing to learn and perform, and b) is immediately familiar to all participants. Folks such as Dick and Larry--IMHO--fail to display the attributes that help others recognize their ability to size up current limitations and *deal* with it. DIGRESSION MODE ON: if the failure of participants to know and use CW is an issue, it is certainly acceptable for those who desire CW to be used to make their wishes known and to try and effect change through POSITIVE action. In the meantime it behooves a good participant to fail to make enemies because things aren't as they wish. DIGRESSION MODE OFF.

2. A good radio amateur operator, who is familiar with EmCom, is also familiar with the current trends in the service of emergency communication provision. Again, one may not "like" the current trend but, to criticize and be disgruntled about it hinders the efficacy of providing excellent communication service. DIGRESSION MODE ON: A good example would be the very attitudes that we often see exhibited here in this newsgroup by folks such as Dick and Larry. Now, they'll tell you that [paraphrasing here] their actions in this newsgroup do not indicate anything about how they are in real life. I say to anyone here, that the actions in this newsgroup are well known locally to your fellow amateurs. I cannot tell you how many fellow hams I have met who know me only by what they have seen here in this newsgroup--and first impression is everything. Most are "OK" with what they see here by my opinions and some are not. The point is that most of us here in this newsgroup are "offensive," in some way or another, to someone who simply reads posts. DIGRESSION MODE OFF. So, if someone exhibits offensive behavior because of current trends in the service, they will not be *received* by local/regional/national participants as effective radio amateur communicators. They may very well be, but if they are not received and accepted as such, their effectiveness is compromised by their degree of offensiveness to others. That would make people such as Dick and Larry pretty darned ineffective as radio amateur emergency communicators.

3. Going back to the "current trends" philosophy: if one cannot recognize shifts and changes in current trends, their ability to participate in effective radio amateur emergency communication is hindered--*IF* they refuse (for whatever reason) to "get on board" with current practices. If the use of CW on emergency/disaster communication nets has diminished, it is paramount to a qualified radio amateur emergency communicator to learn and become familiar with whatever mode of operation is currently the "popular" trend. It's that simple.

4. I daresay anyone--not just radio amateur emergency communicators--who is familiar with emergency/disaster communication, knows that the best mode of

operation is going to be one that most--preferably all--participants in the communication process are familiar with--*regardless* of how well the mode utilizes bandwidth or how well the mode can be implemented, etc. To try to "force" the issue of CW onto radio amateurs may be admirable in some cases, it is fatal to a good emergency/disaster communication effort *UNLESS* all communication providers are "on board" with knowing and using CW effectively. In today's emergency/disaster communication "market" the CW skill is little recognized and certainly not used in many circumstances. DIGRESSION MODE ON: once the communication emergency/disaster operation is under way, of course, CW nets for passing HW traffic are critical to the implementation of effective transmission and delivery of messages to those who would otherwise be "clogging" the resources of responders. It is at *this* level that folks such as Dick and Larry should be recruiting individuals. DIGRESSION MODE OFF.

5. Current trends in the provision of emergency/disaster communication are utilizing many modes. The political arguments are beginning to erode and the stigma associated with utilizing all available radio services is beginning to fade. The recognition of this is limited to those above the level of folks such as Dick and Larry, who are "stuck" in the world of CW so obsessively that they cannot and will not accept what changes are taking place and will continue to take place. As has often been implied by comments in this newsgroup: while "they" are stuck in their world, the rest of the world is moving on and providing a great service--as one of the tenets of amateur radio is realized.

There's loads of other not-so-ham-radio-related items that could be brought up about how folks such as Dick and Larry have missed out; those that deal with the leadership, recruitment, education, organizational, motivation, and process of emergency communication.

But you good emergency/disaster communication folks already know them. ;)

I don't think that's a very fair question. How many long-licensed/current
hams have ever made a contribution to the service? I suspect not many by
your definition, so it's not even a good question, let alone a fair one.

I, uh, don't think you'd want the FCC to see such a position in defense of
CW, Dan. To use a mode test as a filtering tool is wrong.

1141. Aero Mobile .52 Simplex Request

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-13 16:33:28 UTC
From: Jim Weir <jim@rst-engr.com>
Message-ID: <mo13hv059g6bb99flrq618o1v9vphocfe7@4ax.com>
Source record: 70937
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

In about two weeks (and for ten days thereafter) the largest collection of aircraft in the world will be converging on Oshkosh WI from all corners of the USA and several countries. The show actually starts on the 29th of July and ends on the 5th of August, but the heaviest traffic is going to be the weekends of 26 July and 2 August.

There is a large crossbreeding of pilots and hams. Our (admittedly nonscientific) research shows that approximately 15% of all certificated pilots are also certificated amateur radio operators. Given that there will be about 10,000 aircraft flying in at some point during the week, that means 1500 pilot-hams will be in the air somewhere over this country.

Most of us flying our own aircraft have installed ham rigs in the airplane, predominantly 2-meters. Most of the rest will at least have an HT with them.

If you hear one of us on 52 simplex, please give us a shout. Flying between, oh, say, Salt Lake to Minneapolis is hours and hours of nothing but hours and hours. And, please excuse us if you turn it back to us and we don't immediately respond. Every now and again the ground controllers want us to talk with them, and with all due respects, they've got priority.

I think some PCTAs are darned great people and I have no problem associating with them. I think some NCTAs are darned great people and I have no problem associating with them. Now, you Dick, as a PCTA? Well, Carl's expression above says it all.

If radio were invented today, no amateur radio service would even be allowed
to exist. The governments would hog it all. They've already tried to take
it away more than once.

And you can support that statement by providing the call of the
operator and his license history, or is this just another of your
slams at the no-code techs to make yourself feel better?

Lip service, Larry. You couldn't even offer the contribution that N2EY
made. An excellent example, I might add. And, apparently you have no
proof--only your rhetorical blathering idiocy, as usual.

When you get as good as N2EY at knowing CW and examples of its tremendous
cabability, get back to us, won't you?

I can operate a radiotelegraph station, so naturally I would be more qualified to operate such a station than someone who can't. I am not as proficient in operating a radiotelegraph station as others so what is the big deal about that? There are hams who are more qualified in moonbounce than I am, much more so since I have never operated moonbounce and don't have the equipment to do so. There are hams more better qualified to operated digital modes than I because I don't operate digital modes and don't have the equipment to, because I don't care to. I guess in your opinion that would make me an inferior ham. I am sure, no I know, there are hams more qualified in other areas of ham radio than you (although you probably would never admit it). It isn't about qualification, it is about your and Larry's superior attitude you take over others who don't agree with you on the use of CW or obtain the lofty license status you have, your disdain for those unwashed lowly no-code techs, or anyone who prefers to operate other modes over CW. There is room for all license classes in ham radio, room for all who choose to operate whatever mode they prefer and reject other modes. People get into ham radio for many different reasons. A ham who obtains an no-code license and that fills his requirements for operating ham radio and chooses never to upgrade is just as much a "real" ham as you. A ham that only operates phone and chooses never to operate CW is just as much a "real" ham as you, Larry, or anyone else who takes your superior attitude, it is just that you and Larry can't seem to get beyond you egos to see that.
What is youi?

Larry,

If you like, I might be able to sell you some nice ocean-front property in North Dakota :))

73 from Rochester, NY
Jim AA2QA
BTW, you'd be surprised how many young folks I've helped at work with computer problems (and I'm *not* an expert); also, learning Morse (and Baudot in the Navy - yes, we had to memorize the RTTY code!) makes it very easy to understand ASCII and other modes. You get used to the fact that mark and spaces can transfer information. Like languages, the first foreign language is the most difficult.

Prolly the better move. Actually I plan to wait until the lawsuit is filed-yep, after a close reading
of the filing of the United Power Line Council, which HQ is located no more than 3 blocks from the White House on Pennsylvania Ave, I truly believe this is a done deal, and the only way out will be
the route I lambasted last time ARRL did it- I think they'll have to sue theFCC over this one, if even that does any good.

What you have then is a problem understanding what is written. I've made it clear many times, whether it suits you or not, facts are facts- and the fact is that any ham who chooses to avoid learning to use radiotelgraphy is not a fully qualified ham.
So you don't like it put in such un-policacally correct terms. Tough stuff, Pal.
Ego has absolutely not a thing to do with it, and if you had half a clue you'd recognize that fact. Qualification and ability do. End of story. Over and out, good buddy.

That's a crock and you should know it. The entry level tests are indeed an entry gate, as the name indicates. Or that's how it was set up and was intended to be. But you whiners
who want everything handed to you on a platter wouldn't let qualifications remain meaningful, so an overburdened, underfunded FCC was happy to start the big dumbdown which will continue until there's nothing left to destroy but what little is then left of our allocations. THEN we won't be much of a problem to the FCC, and they know it.

> ...not the final exam.

The Final Exam comes much later.

>
> That has always been the case with ARS.

You continue to show how little you actually know about the ARS.

Tech do not deserve ANY HF privlidges. If CW testing goes away then Tech should remain VHF ONLY. Tech + should be elliminated by attrition with no renawal available. In otherwords pass general or stay on ten meter phone and VHF only. Thats fair.

The present Novice bands need to be refarmed to either digital/cw or phone segements.

We only need THREE Classes license. VHF/ Basic HF/ Advanced HF.

1163. Re: The Day has come....

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-13 23:21:27 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <XPlQa.555$Ko7.16@news02.roc.ny>
Source record: 70962

No one should be 'slowed down'. The problem, as I see it, is that the tests have been watered down and Q&A manuals published. Here in New York State, the regents math exam was thrown out as it was too difficult. Can you believe that one 'problem' was that they asked questions on geometry? I would, myself, consider that part of 'math'. The question, to me at least, is what should be tested for? I would certainly say safety - both DC/low frequency AC and RF. Obviously, basic antenna theory appears beyond some 'extra' class tickets. I believe you have stated in the past (and I could be wrong; I'm not going back through archives) about the new 'computer literate' youngsters. Perhaps a simple question such as 'program two different methods of sorting lists in two different computer languages' could prove your point. A fairly elementary problem. We aren't talking FFTs here (although I personally think this might be overkill). The question still remains - what should be tested for and how deep for various classes of licenses. For the record, I went back in 1993 after letting my tickets drop around 1981 or so (not sure of the exact year). In going after (and obtaining) my GROL, one of the examiners asked me about testing for the what-cha-macall-it. Some distant early warning emergency beacon testing thingy on board ship. I knew nothing about it. Do you know I missed that (I took it since it cost nothing more - I was charged by the session, not the tests) by exactly *ONE* question. The poor guy felt so sorry for me. I'd feel sorrier for the folks aboard ship had I passed and gotten a job as a radio officer aboard ship! Now, admitting that I knew *nothing* and failed by only *one* question, would you tend to believe that the test just *might* have been too easy? Heck, I wasn't even sure of the emergency channel (was it 150 something MHz?). We'll be in trouble if they ever lower the requirements for brain surgeons the way they've lowered the licensing requirements for radio operators. Just my personal opinion, of course, but I'd love to hear your side of this one. BTW folks, this is an interesting discussion and I'd appreciate it if no one flamed me nor Vshah101. Thanks :)

73 from Rochester and awaiting your reply,
Jim AA2QA
